BETTER SOLUTIONS, INTELLIGENTLY ENGINEERED

Our Ref: SG/TDN/NTH2484

Date: 10 March 2021

Dear Sirs

Discharge of Condition 7.2

The purpose of this design statement is intended for the discharge of the planning condition 7.2, associated with drainage for the new section of loop road.

"No phase of the infrastructure development (as defined in the Development Framework document submitted as part of planning application D35130), shall be commenced until a scheme for the disposal of surface water from that phase has been approved by the Local Planning Authority. Such a scheme shall be constructed and completed in accordance with the approved plans."

The drainage layout *KBP-BWB-HDG-XX-DR-C-0500* clarifies the point of connection for the drainage strategy. The point of connection is to utilise the existing Highways Drainage which in turn is an indirect connection to the UU sewer.

The previous loop road phases had envisaged and made allowances for the above strategy. By ensuring the delivery has been provided in line with the previous sitewide strategy and approved information, we comply with the design intent of the overall strategy and the parameters within.

Yours faithfully
