TREES

Botanical Name	Common Name	Description	Images
Betula utilis jacquemontii	White-barked Himalayan Birch	This beautiful birch has bright, peeling creamy-white bark. The ascending narrow crown of young trees broadens with age. Grows to a height of 10-15m with a 10m spread. AGM	        
Carpinus betulus	Common Hornbeam	The hornbeam is a shade tolerant, relatively slow growing but ultimately tall tree. The trunk has smooth grey bark which often has prominent ribs. The foliage is ovate and toothed with an uneven surface. When used as a hedge, the brown autumn foliage which rustles in the wind, persists all through the winter. Grows to a height of 15-20m with a 12-15m spread. AGM	         

Carpinus betulus 'Fastigiata'	Fastigate Hornbeam	This large sized tree which is only narrowly upright when young; later it balloons out becoming broadly pyramidal then rounded in outline. For a narrow growing form, refer to the form 'Frans Fontaine'. Grows to 16-18m high with a 12m spread although can extend to 20m. AGM	
Fagus sylvatica	Common Beech	The Common Beech is tall-growing & broad-spreading with typically smooth grey bark. This fine native tree needs ample space to develop its full character. Foliage is broadly oval, opening a translucent green, ageing through mid-green and turning to gold and russet shades in autumn. The smooth, grey bark is attractive, but can crack if unshaded. When used as a hedge, the brown autumn foliage persists through to spring. Grows to a height of 20-25m with a 12-15m spread. AGM	
Fagus sylvatica 'Dawyck Purple'	Purple Dawyck Beech	A narrow columnar tree with purple foliage which turns green in late August/September then yellow in autumn. Grows to 15-18m high with a 4-5m spread. AGM	

Sorbus aucuparia 'Asplenifolia'	Cut-leaved Rowan	A popular variety with each leaflet quite deeply toothed. Ascending branches. The crown is relatively narrow on young trees, but broadens somewhat with age. Grows to a height of 10-12m with a spread to 7m.
