

ROCHDALE CREMATORIUM

NOISE and ODOUR ASSESSMENT

NOISE

The proposed flue does not generate any noise per se and there will be no difference in terms of noise from what has been approved previously.

See attached - *FTIII Abated- Estimated Crematory Noise Data* for the existing / previously approved fans.

ODOUR

The emissions from the proposed flue should be virtually odourless as they have both a mercury abatement system installed as well as the additional DE-NOx abatement which should virtually eliminate any odours so there will be no difference in terms of odour from what has been approved previously.

See attached - *FTIII - UK Specification_Environmental performance*
