Mini Tree Report

Date: 10/11/2020

Mr Simon Byrn
Ref land at the junction of Bradshaw St and Manchester St
Heywood

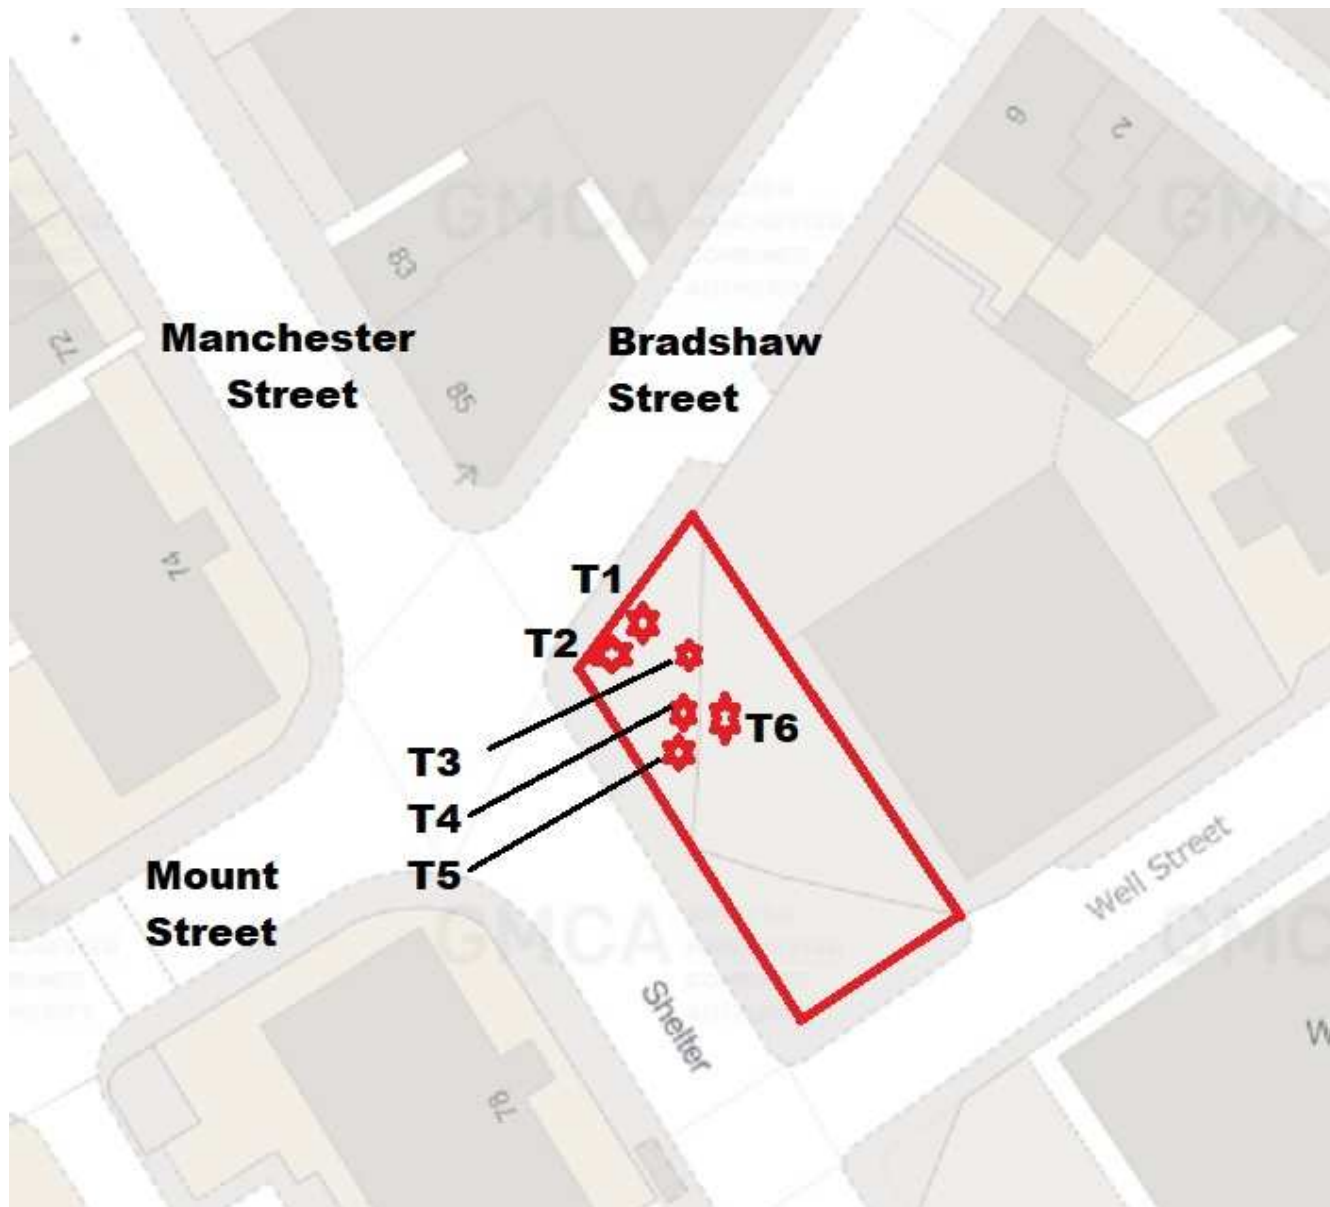

As requested, please see my mini tree report, as previously mentioned this offers no guarantees as trees are living organisms and can fail at any time. We would also like to point out no indemnity or insurance cover is offered. This report is in “my opinion” only and covers only the trees that have been inspected.

Work done

Site visit, arboricultural inspection, photography, area plan and report.

Tree in question

Five willows and a birch tree, all small and appear to of self-seeded referenced T1-T6 on the plan.

T1 = Willow 8-meter that bifurcates at its base then goes multi stemmed from 1.5 meter where it was coppiced and regenerated. Poor example

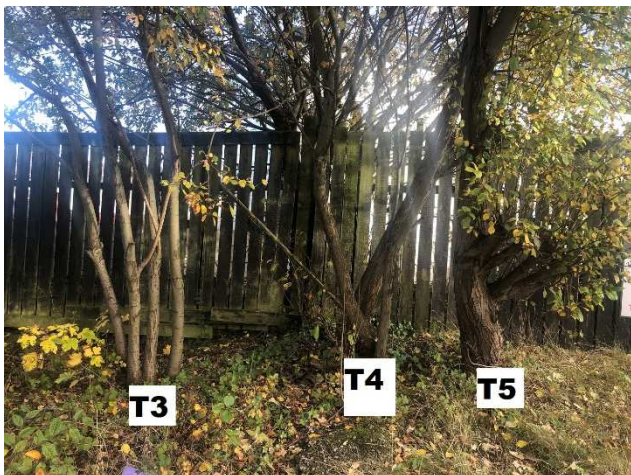

T2 = Birch 9 meter that has grown immediately next to T1, bifurcates at 1 meter into 2x 140mm stems. Poor example.

T3 = Willow 5-meter multi stemmed from base Poor example.

T4 = Willow 8-meter multi twisted overlapping stems from base. Poor example.

T5 = Willow 8-meter 180mm DBH leaning with regrowth emanating from poor previous branch removals. Poor example.

T6 = Willow 8 meter bifurcates at 1 meter previously pollarded to 3 meter and regrown a dense canopy. Poor example.

Condition

All trees are of low value, none are mature trees and several have been previously coppiced or have poor quality previous pruning cuts. These trees offer no amenity value to the area and there would be no benefit in retention if the site was to be redeveloped.

Regards

C.Ashton
