

Conway Council

North Wales

Regeneration project for Conway Council,
in a conservation area.

Solution

It was especially important the right system was used, hence the Terrix system using Eps insulation with the Terrix Polymer-Silicate renders is the perfect choice.

The renders being based on Silicate give an extremely high degree of protection and high vapour permeability, allowing moisture to escape through the system.

Brick slip breathable system.

The Terrix system is the best product available due to its unique features:

- **Water and frost resistant**
- **Light weight, small thickness**
- **Vapour permeable**
- **Algae Resistant**
- **Easy installation**
