Waste strategy for Hot food takeaway

Havana Burgers and Shakes are aware of good waste practices required of their businesses.

Rochdales MBC

Hot food takeaway waste management strategy which details the disposal of grease; how this will be prevented from going on the floor and into the sewers. Paragraph 8 of [Rochdale's Hot Food Takeaway SPD](#) extract below highlights issues with grease and requires that it is properly managed.

Guidelines & Standards for Hot Food Takeaway Uses Supplementary Planning Document
Adopted April 2015 Updated February 2017

8. Disposal of Waste (HF5)

- 8.1 Hot food takeaways can generate a significant volume of waste. Consideration must, therefore, be given to how this waste is disposed of.
- 8.2 It is important that bins of a suitable size are provided in a location that is well screened and easily accessible for both the business operator and collection services. Inadequate refuse storage can result in harm to visual amenity as well as serious risk to public health. Where possible, refuse storage should be contained within the main building. Where this is not possible, a secure structure should be provided on site which adequately screens the refuse and is designed to respect the character of the surrounding area. Refuse storage should be sited so as not to cause an odour nuisance to neighbouring residents or occupiers.
- 8.3 The operation of hot food takeaways, also have the potential to cause significant problems for the drainage system as a result of the disposal of fat and grease. Most fat or grease discharged into private drains is liquid but in the cooler temperatures of the drains it can solidify. A build-up of fat deposits may block the drain either locally or further down the sewerage system. These blockages can cause subsequent problems, such as the leakage of foul sewerage or the internal flooding of properties or land. To prevent such problems, suitable grease traps must be installed on all drains for hot food takeaways.

Havana propose to install Grease traps at each sink outlet or combination sink outlets
To prevent and wash grease entering the sewage system. Details of proposed unit below

Commercial Grease Trap Epoxy Coated Steel 107 Litre Capacity – 25KGB

Brand: Empire Model: 25KGB

Availability In stock
