

Solar PV Design Service - Fair Use Policy

Viridian Solar offers a solar PV design service to key customers. Details of the service are outlined in a separate document. Our service is subject to this Fair Use Policy, which aims to ensure that all customers can enjoy a high-quality service with good response times.

The design service includes the following stages and deliverables without charge. For work that exceeds the fair-usage deliverables outlined below we reserve the right to apply a charge, which will be confirmed with the customer before work is started.

Design Stage	Deliverables Provided to Key Customers without Charge
1. Planning	A single draft PV design to assist with Planning Submissions, comprising: • an assessment of any site or plot specific issues which may affect the PV annual energy output in the SAP calculations • a marked up PV site plan drawing showing the PV locations • a plot by plot schedule which defines each PV array <i>(individual house type PV drawings are not provided at this stage)</i> Assistance in the preparation of the G98 Form A and associated G98 application files
2. Tender	One Tender revision is provided without charge • Detailed solar design files, including all information needed by the tendering solar PV installation subcontractors • PV arrangement drawings for each house type to assist the installation works
3. Construction	A PV Site Plan and the equipment plot schedule are supplied to the Site Manager Training is provided for any PV Installer not already familiar with Clearline fusion roofing system Revisions caused by a replotting of the site layout that alters the required PV specification is included
