INVASIVE SPECIES REPORT

For:	Dimora Construction
By:	Total Groundcare Solutions Ltd
Site Address:	William Street, Littleborough, Rochdale, OL15 8JP
Date:	4 May 2021

1. Dimora Construction commissioned Total Groundcare Solutions Ltd to undertake an invasive species survey in May 2021 at the above site address.
2. The survey was carried out to identify if invasive species of plants - specifically Japanese Knotweed (*Fallopia japonica*) and Himalayan balsam (*Impatiens glandulifera*) were present at the site address.
3. The site was visited by Total Groundcare Solutions Ltd on 4 May 2021.
4. The survey was based on a walkover survey approach, whereby all accessible areas of the Survey Site were walked in daylight hours, with a visual search for the target species undertaken.
5. Particular focus was given to areas where the target species were most likely to be found, for example areas of disturbed ground and tracks where imported material may have been used or machinery could have led to the spread of these species.
6. The survey found no evidence of the target invasive species at the survey site.
