WALL PLAQUES AT HOPE CHAPEL, ROCHDALE

METHOD STATEMENT

1. Removal of existing memorial plaque in foyer

2 x craftsmen to attend site and erect compact lightweight scaffold to give approximate working platform height of 2mtrs. The memorial plaque has been fixed in the traditional manner and will be removed using hand tools only. Please note that no allowance has been made for the making good of the plasterwork or decorating once the plaque has been removed. The memorial to be lowered to ground level in stages by hand, within the confines of the scaffold.

2. Re-siting of Memorials

Please note that a trustee will be required on site to determine and confirm precise levels and locations of the re-sited memorials. The same lightweight scaffolding will be erected to be used as a working platform for the fixing of each plaque. The plastered wall onto which the memorials are to be fixed will be drilled and power will be required for a percussion drill. The plaques will then be lifted by hand onto the working platform and fixed to the wall by means of stainless steel dowels and copper cramps, exactly as they would have originally been fixed. Adhesive to be used will be casting plaster, to again match the original fixing methods. Joints between the rear face of the plaques and finished plasterwork to be caulked ready for painting by others. Upon completion, scaffold to be dismantled, leaving the working areas clean, tidy and in the same condition in which it was found.

Please note that reasonable access and underfoot conditions will be required before memorials can be removed or re-sited.

PPE required will include safety boots, safety glasses and craftsmen will have access to first aid essentials. Tools to be used include hand tools and percussion drill only with extension cable.
