1. INTRODUCTION

1.1. BACKGROUND

E3P has been commissioned by Kellen Homes to undertake a Mineral Safeguarding Assessment in connection with a parcel of land situated south of Heywood Road, Rochdale (herein referred to as Castleton Sidings and the site) to support a planning application for prospected construction of low-rise residential properties.

1.2. PROPOSED DEVELOPMENT

Kellen Homes are considering the proposed acquisition and future redevelopment of the site with a hybrid planning application comprising the following:

- ✳ Full planning application for residential development, including access, car parking, landscaping, open space and associated engineering and infrastructure including an electric substation and foul water pump station.
- ✳ Outline planning permission with all matters reserved for the principle of development to facilitate the East Lancashire Railway (ELR) extension.

A snapshot of the proposed development layout is indicated in Figure 1.1.

FIGURE 1.1 SNAPSHOT OF PROPOSED DEVELOPMENT

1.3. OBJECTIVES

The objectives of the geoenvironmental site assessment are as follows:

- ✦ Review the Core Strategy Development Plan for Managing Mineral Resources (G10) and Managing Waste (G11) as set out by Rochdale Metropolitan Borough Council;
- ✦ Assess site specific and local area characteristics that extractive working will have implications based on the Core Strategy Development Plan and the National Planning Policy Framework;
- ✦ Review historical plans, geology, hydrogeology, site sensitivity, flood risks and mining records;
- ✦ Assess the local area in terms of identified environmental receptors and potential impact associated with any mineral extraction;
- ✦ Assess the presence of sensitive infrastructure and associated impact;
- ✦ Assess the physical and economic viability of mineral extraction.

1.4. LIMITATIONS

The limitations of this report are presented in Appendix I.

1.5. CONFIDENTIALITY

E3P has prepared this report solely for the use of the client and those parties with whom a warranty agreement has been executed, or with whom an assignment has been agreed. Should any third party wish to use or rely upon the contents of the report, written approval must be sought from E3P; a charge may be levied against such approval.

2. SITE SETTING

2.1. SITE DETAILS

Site Address	Castleton Sidings, Heywood Road, Rochdale OL11 3AU
National Grid Reference	E 387930, N 410140
Site Area	6.0 Ha

All acronyms used within this report are defined in the Glossary presented in Appendix II.

A site location plan is presented in Appendix III as Drawing 14-768-001.

2.2. CURRENT SITE USE

E3P has undertaken a site walkover of the entire site and a description of the key findings is summarised in Table 2.1.

TABLE 2.1 SITE DESCRIPTION

Occupancy/Use	The site is a roughly semi-circular shaped parcel of land to the south of Heywood Road in Rochdale and to the west of Castleton railway station. Live railway lines are present along the south eastern site boundary and the site itself forms derelict railway sidings open to the adjacent active railway. The south western quarter of the site falls within a designated area of greenbelt (proposed POS) and the north eastern quarter falls within an area of network rail operated land that will ultimately be retained by ELNR. All former structures except for an active signal box have now been removed; however, track sidings, ballast, and relict hardstanding and concrete slabs remain. Self-seeded vegetation and young trees have now grown across the site and along the periphery.	
Surface Cover (%)	Buildings	0 %
	Hardstand	85 %
	Soft Cover	15 %
Structures	The site comprises an area of former railway sidings, with the majority of the tracks only partially dismantled. Areas of concrete pertaining to former structures footprints are identifiable, and a relict railway platform is present in the east of the site, along with a signal box for the railway. No other structures are present on site.	
Access	Access can be gained to the site via a small service road off Heywood Road, into the Network Rail land. The site is not openly accessible to pedestrians.	
Slope	The site is generally flat and level due to its historical use as railway sidings.	
Vegetation/Ecology	The site largely comprises hardstanding, however, scrub vegetation is present across the site with areas of overgrown grasses. Semi-mature and mature trees are located around the northern and south eastern boundary of the site.	

2.3. SURROUNDING AREA

The surrounding area land uses are summarised in Table 2.2.

TABLE 2.2 SURROUNDING LAND USES

DIRECTION	LAND USE
North	Castle Hawk Golf Club, Residential units.
East	Rochdale Canal, Residential Units, Railway Sidings.
South	Railway Sidings, Managed Grassland.
West	Castle Hawk Golf Club, Managed Grassland.

2.4. MINERAL SAFEGUARDING AREAS

National Planning Policy Framework (July 2021) indicates that authorities should safeguard mineral resources by defining Mineral Safeguarding Areas; and adopt appropriate policies so that known locations of specific minerals resources of local and national importance are not sterilised by nonmineral development where this should be avoided (whilst not creating a presumption that the resources defined will be worked). The NPPF also indicates that authorities should set out policies to encourage the prior extraction of minerals, where practical and environmentally feasible, if it is necessary for non-mineral development to take place and they should not normally permit other development proposals in Mineral Safeguarding Areas (MSA) if it might constrain potential future use for mineral working.

Greater Manchester Joint Minerals Development Plan (Policy 7) states that *'MSAs are aimed at protecting known locations of specific mineral resources of local and national importance from needless sterilisation by non-mineral development, whilst not creating a presumption that resources so defined will be worked. An MSA does not automatically preclude other forms of development. The intention is to alert prospective developers to the existence of mineral resources so that they can be taken into account at the earliest stage of a possible development.'*

Rochdale Metropolitan Borough Council have produced a planning policy framework that provides a guide to minerals operators and the public about:

- ✚ The locations where mineral extraction may take place;
- ✚ The safeguarding of sensitive environmental features and of mineral resources with potential for future extraction; and,
- ✚ All aspects of environmental amenity and resource protection including the sustainable transportation of minerals.

Relevant policies and guidance on Mineral Safeguarding Areas in Castleton are set out in the following:

- ✚ Greater Manchester Joint Minerals Development and Waste Local Plan (Mineral Safeguard Areas)
https://www.manchester.gov.uk/info/200074/planning/6161/greater_manchester_joint_minerals_development_plan
- ✚ Rochdale Local Plan, Adopted April 2013

 Rochdale Core Strategy (G10; Managing Mineral Resources) -
<https://www.rochdale.gov.uk/downloads/file/405/core-strategy>

 Guidance Note on Development in Minerals Safeguarding Areas, December 2014.

Greater Manchester contains a number of minerals of economic importance including coal, sand and gravel, gritstone (sandstone), and brickclay. These mineral resources have been designated and protected as Mineral Safeguarding Areas (MSA) on the Policies Map through Policy 7 of the Joint Greater Manchester Joint Minerals Development and Development Management Policies Local Plan (part of the Development Plan).

Based on the MSA map for Rochdale (Map 24 – extract in Figure 1.1), approximately two thirds of the site falls within a MSA for Sand and Gravel, Brick Clay and Coal.

FIGURE 2.1 EXTRACT OF MSA MAP FOR ROCHDALE

2.4.1. ROCHDALE METROPOLITAN BOROUGH UNITARY DEVELOPMENT PLAN 1999-2016 (SUPERSEDED)

The previous local plan makes reference to G/M/1 Protection And Prudent Use Of Resources.

The following statement is included:

The MPA does not currently have sufficient information relating to reserves of minerals in terms of quantity, quality or geological disposition to identify specific sites or preferred areas for future minerals development. An Area of Search approach has therefore been adopted in order to identify those areas of the Borough where mineral resources are known to exist and where proposals for the extraction of minerals will be appropriate. The Areas identified are located predominantly in those areas of the Borough which are highly valued for their landscape quality. Proposals for extraction will therefore need to be carefully balanced against potential loss of landscape character. Assessment of all development proposals will give relevant weight to local, regional, national and international designations.

A number of plans that show relevant Mineral Safeguarding Areas are available. The map for the site is reproduced in Figure 2.2 and shows approximately two thirds of the site to be located within a designated Green Belt area (G/D/2 and D/4), but not within an area of search for minerals. However, areas for sand extraction are noted to the north and south of the site.

The plan notes that from 26 April 2013 the Mineral policies and associated boundaries have been replaced by the Greater Manchester Joint Minerals Development Plan Document (Adopted April 2013).

2.4.2. GREATER MANCHESTER JOINT MINERALS DEVELOPMENT PLAN (2013)

The Rochdale Metropolitan Borough has adopted the Greater Manchester Joint Minerals Development Plan.

An extract from the Key Diagram, produced within the Greater Manchester Joint Minerals Development Plan and Waste Development Framework is presented in Figure 2.3, and Figure 2.4 respectively. Figure 2.3 indicates the majority of the site now falls within a Policy 8 Mineral Safeguarding area for Coal, Brick Clay, and Sand and Gravel.

An area in the west of the site appears to have been worked already. With reference to historical maps, this area appears to coincide with a historical clay pit (Brick Kiln Pits pre 1851-pre 1898).

FIGURE 2.3 EXTRACT OF GREATER MANCHESTER JOINT MINERALS DEVELOPMENT PLAN

Policy M2 seeks to prevent the needless sterilisation of mineral resources by non-minerals development. The policy states the following:

Within these mineral safeguarding areas identified, planning permission will not be supported for any form of development that is incompatible by reason of scale, proximity and permanence with working the minerals, unless the applicant can demonstrate to the satisfaction of the Minerals Planning Authority that:

- The mineral concerned is no longer of any value or has been fully extracted.*
- The full extent of the mineral can be extracted satisfactorily prior to the incompatible development taking place.*
- The incompatible development is of a temporary nature and can be completed and the site returned to its original condition prior to the minerals being worked.*
- There is an overarching need for the incompatible development that outweighs the need to avoid the sterilisation of the mineral resource.*
- That prior extraction of minerals is not feasible due to the depth of the deposit.*
- Extraction would lead to land stability problems.*

3. GEOLOGY

3.1. BGS MAPPING

The British Geological Survey (BGS) map for the site, (1:50,000, Solid and Drift editions) and online records indicate the site is underlain by the geological sequence presented in Table 3.1.

TABLE 3.1 SUMMARY OF UNDERLYING GEOLOGY

GEOLOGICAL UNIT	CLASSIFICATION	DESCRIPTION	AQUIFER CLASSIFICATION
Drift	Glaciofluvial Deposits (North East and East)	CLAY, SILT, SAND and GRAVEL	Secondary A
	Till, Devensian (West of Site)	DIAMICTON	
	Peat (South East)	PEAT	Unproductive
Solid	Pennine Lower Coal Measures	MUDSTONE, SILTSTONE and SANDSTONE	Secondary A aquifer

Snapshots from the geological mapping of the area showing the of the recorded drift and bedrock deposits across the site are given as Figure 3.1 and Figure 3.2 below.

FIGURE 3.1 SNAPSHOT OF SUPERFICIAL DEPOSITS

Figure 3.2 SNAPSHOT OF BEDROCK GEOLOGY AND FAULTING

3.2. BOREHOLE DATA

E3P completed an intrusive site investigation between 19th March 2021, 15th June 2021, and 19th July 2022. During the site investigations all underlying ground conditions were recorded, a brief summary of the stratum encountered across the site is given within Table 3.2. Contrary to the published geology drift deposits of CLAY and SAND were encountered site wide, however, all other findings were in line with the published geology.

The stratum encountered within during the intrusive site investigation are summarised in Table 3.2 below.

TABLE 3.2 SUMMARY OF BGS BOREHOLE RECORDS

STRATUM	DEPTH ENCOUNTERED (m bgl)
MADE GROUND	0.00 – 6.60
TOPSOIL	Not encountered
Firm to Stiff CLAY	1.40 – 15.00
Fine to coarse SAND	0.70 – 9.00
Sandy GRAVEL	1.50 – 2.80
PEAT	3.10 – 6.00

Made Ground deposits have been encountered within all of the exploratory hole locations from ground level to a maximum proven depth of 6.60 m bgl (R0227). The full depth of Made Ground remained unproven in c. 50% of exploratory hole locations. Material generally comprises a black slightly clayey gravelly medium sand / sandy gravel. Gravel constituents predominantly include mudstone, brick, clinker, coal, and ceramic with less frequent inclusions of metal, shale, glass and timber/wood.

Blackish brown pseudo fibrous PEAT was encountered beneath the Made Ground in 36 no. locations. The peat encountered beneath the site was found to range in thickness from 0.20 to 2.60 m thick (CP102), although was predominantly 1.0 m thick or less, and noted to be generally thicker towards the south and west of the site.

Drift deposits were encountered beneath the Made Ground and Peat (where proven) and comprised of alternating SAND/GRAVEL and sandy CLAY and extending to depths in excess of 60.50 m bgl (RB101). Where encountered, shallowest drift deposits were noted to be predominantly granular.

The solid geology was not encountered within the deeper cable holes or rotary open holes across the site. A nearby BGS borehole indicates rockhead at circa 81.00 m bgl.

The Arley Coal seam is conjectured to subcrop beneath the north east of the site, dipping to the west. The depth of this seam is likely to be > 80 m bgl.

4. MINERAL ASSESSMENT CRITERIA

4.1. THE NEED FOR THE DEVELOPMENT THAT OUTWEIGHS THE NEED TO EXTRACT THE MINERAL

The National Planning Policy Framework (NPPF) emphasises the need to increase the supply of housing.

Rochdale Metropolitan Borough Council Local Plan includes a core strategy which is the lead document in the plan.

The Core Strategy includes plans to help deliver:

- ✿ 460 new homes a year between 2012–2028 (totalling 7360 new homes).
- ✿ 210 hectares of employment land.
- ✿ The extension of the East Lancashire Railway to Castleton Station.
- ✿ Park and Ride facilities at train stations and Metrolink stops across the borough.
- ✿ Protection from development on certain land, such as the green belt, valued land, heritage assets and conservation areas.

The site falls within a key area allocated for development including housing and enhancement along the canal corridor. The extension of the ELR will provide commuter links and tourism opportunities, as well as providing new employment opportunities.

The proposed development at Castleton Sidings will make an important contribution towards meeting the long-term housing need and delivering the extension of the East Lancashire Railway to Castleton Station. As such, it is important to allocate new land to meet the development needs of Rochdale, as the borough may not have sufficient suitable and available urban land to meet the need for housing, rail and employment. In addition to the environmental effects, prior extraction would significantly extend the development process and introduce uncertainty over delivery of the much needed development.

4.2. PRIOR EXTRACTION

Prior extraction is not environmentally acceptable or economically viable and the technical information provided in support of the planning application demonstrates that the proposed development will have greater economic value than extraction.

The underlying Glaciofluvial sand and gravel and Glacial Till (brick clay) deposits lie beneath significant thicknesses of Made Ground and Peat deposits (due to the historical raising of levels to create a level development platform) which would impede mineral extraction. Furthermore, brick clay has previously been extracted from some parts of the site (pre 1900s), thus reducing the likely yield and economic viability of extraction.

In addition, the mineral resources would need to be taken off-site for further processing. This increases the handling of the material, adding to cost, and increases the environmental effects as a result of additional vehicle movements.

The addition of quarrying activities would also give rise to significant additional environmental effects by virtue of:

- ✦ Noise from the plant associated with quarrying and noise from additional vehicles;
- ✦ Dust from the quarrying activities and impact on surrounding residential properties and environment;
- ✦ Vibrations from the quarrying activities impacting the adjacent live railway; and,
- ✦ Significant landscape and visual impacts.

4.3. THE LIKELIHOOD OF COMMERCIAL INTEREST IN EXTRACTING THE MINERAL RESOURCE, NOW OR IN THE FUTURE.

The Greater Manchester Joint Minerals Development Plan Authority Monitoring Report 2019-20 indicates that at present, there are insufficient reserves of sand and gravel to meet the current apportionment and the sand and gravel landbank is below the 7-year minimum requirement as laid out in the revised NPPF (2019) and will be fully depleted during the Plan period unless additional proposals for minerals extraction come forward and planning permissions are granted for the release of additional reserves.

Data from the 4-yearly Mineral Surveys conducted by British Geological Survey (BGS) and the Ministry for Housing, Communities and Local Government (MHCLG), indicates that the sub-region continues to rely heavily on imported aggregates, with 76% of sand and gravel consumed in 2009 originating from outside the sub-region, either from elsewhere in the North West or beyond; this figure remained the same in the 2014 Survey.

In addition, minerals planning authorities need to be able to demonstrate a 25-year supply of brick clay reserves. Reserves at the existing Harwood Quarry are due to be depleted towards 2026 and so the sub-region is falling short of this target. Weinberger's Denton Brickworks Factory in Manchester sources 50% of its brick clay from Harwood Quarry and 50% from a quarry in Derbyshire. The Brickworks operator has previously requested assistance in identifying new potential sites for clay extraction within the sub-region.

With the above in mind, new sites will be being considered for mineral extraction. However, the following factors are considered to limit the viability of extraction from beneath the site:

- ✦ The underlying Glaciofluvial sand and gravel and Glacial Till (brick clay) deposits lie beneath significant thicknesses of Made Ground and Peat deposits (due to the historical raising of levels to create a level development platform) which would require significant excavation of unsuitable (non-mineral/aggregate) soils and ultimately lead to unjustifiable mass disposal as waste.
- ✦ Furthermore, brick clay has previously been extracted from some parts of the site (pre 1900s), thus reducing the likely yield and economic viability of extraction.
- ✦ Consultation with the Coal Authority has confirmed that they consider workings in the Arley Coal beneath the site to be unlikely due to its depth (>80 m bgl). The Coal Authority have also stated there are no plans for future mining in the area.
- ✦ The site is bound to the north by a golf course and residential development and the south by a live railway, large volumes of the site would therefore be sterilised to protect these existing developments, thus reducing the overall potential extraction volume.

It is therefore considered that the economic impact of the new development is likely going to outweigh the need for extraction.

4.4. ENVIRONMENT EFFECTS OF MINERAL EXTRACTION

4.4.1. NATURAL AND HISTORIC ENVIRONMENT

The site has had varying historical usage, with earliest historical mapping (1851) illustrating the site to comprise agricultural land with the railway shown to be present along the southern boundary and brick kiln/clay pits immediately to the northwest.

By 1893, the site was in use as railway sidings with an engineering stores and saw mills with chimneys located in the west. Ancillary structures encroached the western sector together with wetlands/possible marshes encroaching the central northern sector.

Tanks and a gasometer are later shown in the centre north and north east respectively, together with an earth working/embankment in the centre of the site, which moves north over time (likely associated with raising levels to create a level platform for expansion of the railway sidings).

By 1956 the engineering works / sawmill had been removed and by 1970s a welding shop, travelling crane, engineering shed, electricity substation and tanks are indicated to be present in the central sector of the site.

Aerial imagery between 2000-2005 shows the site to be covered by hardstanding/ballast, tracks, sheds and various structures. The site appears to have been dismantled/demolished sometime between 2005 and 2013.

4.4.2. HUMAN HEALTH

The potential impact on the critical human health receptors (identified as the adjacent residential properties) associated with any industrial mineral extraction would be predominantly due to noise, particulate matter in ambient air (dust), visual intrusion, traffic, and air quality impact.

Mass excavation of overlying anthropogenic and potentially contaminated materials (Made Ground and Peat) would generate significant volumes of material with no economic value.

4.4.3. NOISE

The subject site is located adjacent to Castleton railway immediately to the south of the site, with residential dwellings situated to the north and west of the site.

Large scale industrial mineral extraction would likely induce noise levels that would exceed the permissible levels for private dwellings and gardens with the area for extraction being directly adjacent to the residential dwellings. Construction of noise mitigation measures such as acoustic bunds to mitigate the anticipated noise impact would result in a significant loss of visual amenity at the adjacent residential properties.

4.4.4. DUST

The subject site is located in a predominantly residential setting, with residential areas to the immediate south and east of the site.

The potential impacts associated with industrial mineral extraction within ambient air would likely exceed air quality indicators for exterior areas of residential dwellings unless suitable mitigation measures could be defined. However, given the close proximity of the receptor, it is considered that a high standard would be required and thus expensive/difficult to implement.

4.4.5. TRAFFIC

The extraction of resources from site would require the distribution of raw materials or products by HGV road haulage. The only identified access to the site is through a single car width lane off Heywood Road, Rochdale. Where Heywood Road meets with the main arterial road (A664 Manchester Road), the turning is left turn only, adjacent a poor visibility rail bridge. Upgrades to local road networks would likely be required to facilitate increased trafficking with aggregate wagons etc.

The movement of material by road would include both vehicles arriving at site and then subsequent distribution and this would have a significant impact on the number of HGVs within the surrounding area. The number of vehicle movements will be dependent on the volume of material extracted and the type of production being completed.

Additionally, a national and local objective is to minimise road travel and replace with alternative transport methods to reduce CO2 impact.

4.4.6. ABNORMAL CONSTRUCTION CONDITIONS

Should minerals be excavated, the site will be significantly lower than current levels meaning that it would then be necessary to fill/stabilise the land with suitable inert material to provide a sustainable development platform.

The importation of fill material would require a significant number of vehicle movements, approximately equivalent to those needed within the extraction phase.

4.4.7. SLOPE STABILITY

Excavations and associated dewatering attributed to mineral extraction may induce instability that could be a significant risk to the adjacent developments (residential and raid). Should instability be induced extensive stabilisation may be required.

Should the mineral on site be extracted geotechnical failure could not be discounted. A robust retaining design would be required to protect adjacent housing.

4.4.8. FLOOD RISK

If the site was to be subject to commercial mineral extraction, a significant and unquantifiable risk would be present associated with a flood associated with the management of groundwater and diversion of site drainage including any streams if present.

4.4.9. IMPACTS SURFACE AND GROUNDWATER QUALITY

As discussed above, it would be necessary to control surface water in streams and culverts and this may have an impact on both ecological and chemical water quality.

4.5. SUMMARY

It has been clearly demonstrated that it is not environmentally acceptable to extract the mineral prior to non-mineral development taking place.

While the mineral occurs close to the surface, mining of these minerals would likely have a detrimental effect on the environment without significant control measures being implemented.

5. CONCLUSIONS AND RECOMMENDATIONS

Based on the MSA map for Rochdale (Map 24 – extract in Figure 1.1), approximately two thirds of the site falls within a MSA for Sand and Gravel, Brick Clay and Coal.

This assessment has confirmed that although there is a recognised shortfall of mineral reserves locally, the site falls within a key area allocated for development including housing, enhancement along the canal corridor and extension of the ELR. The extension of the ELR will provide commuter links and tourism opportunities, as well as providing new employment opportunities.

The site itself is a small area within a much larger mineral safeguarded area. Therefore, development on the site would not adversely affect the area set aside for mineral extraction in the wider area. There are likely to be more suitable areas where no residential areas are in close proximity.

The following factors are considered to limit the viability of extraction from beneath the site:

- ✳ The underlying Glaciofluvial sand and gravel and Glacial Till (brick clay) deposits lie beneath significant thicknesses of Made Ground and Peat deposits (due to the historical raising of levels to create a level development platform) which would require significant excavation of unsuitable (non-mineral/aggregate) soils and ultimately lead to unjustifiable mass disposal as waste.
- ✳ Furthermore, brick clay has previously been extracted from some parts of the site (pre 1900s), thus reducing the likely yield and economic viability of extraction of this mineral.
- ✳ Consultation with the Coal Authority has confirmed that they consider workings in the Arley Coal beneath the site to be unlikely due to its depth (>80 m bgl). The Coal Authority have also stated there are no plans for future mining in the area.
- ✳ The site is bound to the north by a golf course and residential development and the south by a live railway, large volumes of the site would therefore be sterilised to protect these existing developments, thus reducing the overall potential extraction volume.
- ✳ The sites interrelationship with highly sensitive receptors including adjacent/nearby residential housing and railway would preclude mineral extraction given that the environmental and physical impact would be unacceptable.
- ✳ The only identified access to the site is through a single car width lane off Heywood Road, Rochdale. Where Heywood Road meets with the main arterial road (A664 Manchester Road), the turning is left turn only, adjacent a poor visibility rail bridge. Upgrades to local road networks would likely be required to facilitate increased haulage traffic.

Based on the above there is an overriding need for the housing development, and mineral extraction cannot be achieved in an environmentally acceptable or economically viable manner.

END OF REPORT

APPENDIX I

LIMITATIONS

1. This report and its findings should be considered in relation to the terms of reference and objectives agreed between E3P and the client as indicated in Section 1.2.
2. For the work, reliance has been placed on publicly available data obtained from the sources identified. The information is not necessarily exhaustive and further information relevant to the site may be available from other sources. When using the information, it has been assumed it is correct. No attempt has been made to verify the information.
3. This report has been produced in accordance with current UK policy and legislative requirements for land and groundwater contamination which are enforced by the local authority and the Environment Agency. Liabilities associated with land contamination are complex and requires advice from legal professionals.
4. During the site walkover, reasonable effort has been made to obtain an overview of the site conditions. However, during the site walkover, no attempt has been made to enter areas of the site that are unsafe or present a risk to health and safety, are locked, barricaded, overgrown, or the location of the area has not been made known or accessible.
5. Access considerations, the presence of services and the activities being carried out on the site limited the locations where sampling locations could be installed and the techniques that could be used.
6. Site sensitivity assessments have been made based on available information at the time of writing and are ultimately for the decision of the regulatory authorities.
7. Where mention has been made to the identification of Japanese Knotweed and other invasive plant species and asbestos or asbestos-containing materials, this is for indicative purposes only and do not constitute or replace full and proper surveys.
8. The executive summary, conclusions and recommendations sections of the report provide an overview and guidance only and should not be specifically relied upon without considering the context of the report in full.
9. E3P cannot be held responsible for any use of the report or its contents for any purpose other than that for which it was prepared. The copyright in this report and other plans and documents prepared by E3P is owned by them and no such plans or documents may be reproduced, published or adapted without written consent. Complete copies of this may, however, be made and distributed by the client as is expected in dealing with matters related to its commission. Should the client pass copies of the report to other parties for information, the whole report should be copied, but no professional liability or warranties shall be extended to other parties by E3P in this connection without their explicit written agreement there to by E3P.
10. New information, revised practices or changes in legislation may necessitate the re-interpretation of the report, in whole or in part.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
