

T1 (Common ash) -
Ash dieback within canopy, approx >75%
of canopy remaining

Ceriporus squamosus fungal fruiting
body found on old wound at base. Decay
appears localised

T2 (Common ash) -
Ash dieback within canopy, approx 50%
of canopy remaining

Picture 1 - Eastern view of tree

Picture 2 - Western view of tree

T4 (Common ash) -
Ash dieback within canopy, approx 50%
of canopy remaining

Previous failure within canopy.
Large limb has snapped out and
lies on ground at base.

Recent failure likely due to
overextension/top heavy limb as
no sign of weak union or fungus
at time of survey.

T5 (Common ash) -
Ash dieback within canopy, approx <25%
of canopy remaining

Large deadwood associated with canopy
Saprophytic fungus associated with limbs
indicating disfunctional wood.
