Dear Sir,

30 Timbercliffe | Application to Remove 3 Sitca Spruce Trees [T8, T9, T10]

With reference to the above and following my site visit I detail below my comments in relation to the felling of 3No Sitca Spruce trees.

The 3No Sitca spruce trees are in poor condition having previously been topped, as spruce grows with the main leader shoot and with the main central leader shoot having been removed the trees growth will assume a twisted shape [mistakenly planted as a hedge, obviously wrong species]

My recommendation is to remove the 3No Sitca spruce trees and replace them with a native species, the selection of a suitable species would be in accordance with recommendations made by Rochdale BC Planning and Development Department.

Please do not hesitate to contact me if you require any further information.

Yours Faithfully,

Jack Taylor
