

Extension to Village Hotel Bury, Waterfold Business Park, Rochdale Rd, Bury, BL9 7BQ

Report Prepared for: VUR Village Trading No 1 Limited
Report Reference: AEL-5055-PPI-1027983v2
Current use: Part of hotel car park

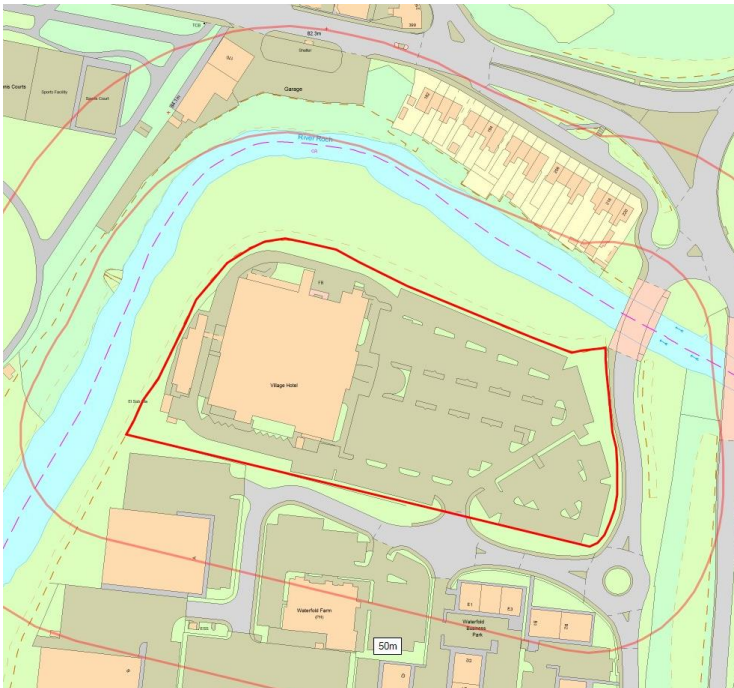

Client Reference: N/A
Date: 21/10/2024
Proposed use: Hotel extension

Planning Liabilities

Low risk

Executive Summary

Landmark Information Group Limited, trading as Argyll Environmental, was commissioned by VUR Village Trading No 1 Limited to conduct a Phase One Planning report for Extension to Village Hotel Bury, Waterfold Business Park, Rochdale Rd, Bury, BL9 7BQ (the Site). This report assesses qualitatively whether there are any potentially unacceptable risks in regards to land contamination through the creation of an initial conceptual site model.

Key findings

Introduction

The Site is Village Hotel Manchester Bury and is in use as a purpose-built hotel and associated activities. There are proposals to extend the existing hotel to comprise a 34-bedroom extension, including the reconfiguration of the existing car park, landscaping, and associated works. This assessment is required in support of the planning application.

Summary

The Site remained as open land until the early 2000s when it was developed as a hotel. The hotel has no oil/diesel storage and no generator, and so no credible source of contaminants have been identified on Site.

Some historic and current sources of contaminants have been identified in proximity to the Site. However, upon review of these sources in conjunction with the hydrogeological characteristics of the Site and wider area, no plausible significant contaminant linkage has been identified.

Recommendation

1. The Phase I should be submitted to the Local Authority for consideration.
2. If any contamination is identified during re/development, all work must cease and you must alert the Local Authority.

Low risk

Note: This Executive Summary forms part of Landmark Information Group's Phase One Planning report (Ref. AEL-5055-PP1-1027983) and should be read in conjunction with the main body of the report.

Introduction

Understanding this report

The Phase One Planning report is a preliminary risk assessment. This report identifies potential contamination issues and other constraints associated with proposed re/development, in line with Land Contamination Risk Management guidance published by the Environment Agency. Please refer to the methodology section at the end of the report for more details.

Context and scope of works

Argyll Environmental, part of Landmark Information Group, has been instructed by VUR Village Trading No 1 Limited to carry out the below scope of works for Extension to Village Hotel Bury, Waterfold Business Park, Rochdale Rd, Bury, BL9 7BQ (the 'Site'):

- A review of the historical development of the Site and surrounding area, by reference to current and historical Ordnance Survey maps and plans and other sources of historical information (e.g. aerial photographs where available);
- A review of information contained within a Landmark environmental data pack and other relevant environmental information held on publicly available databases (including environmental permits and licences, discharge consents, pollution incidents, waste management facilities, etc.);
- Targeted review of the Local Planning Authority's planning records;
- A study of the environmental sensitivity of the Site, with reference to the local geological, hydrological and hydrogeological setting from BGS and EA information;
- Review of existing third party reports (e.g. Phase 2) and correspondence if appropriate and limited to 3hrs;
- Overview of other constraints that may impact upon the re/development such as mining, radon risk and Unexploded Ordnance (UXO) in accordance with LCRM guidance;
- A site walkover and discussions with current owner (where available) by an environmental auditor;
- The derivation of a Conceptual Site Model (CSM), identifying potential contaminant linkages at the Site based on Land Contamination Risk Management (LCRM) 2020 guidance;
- The provision of a fully interpretative report, including a qualitative risk assessment to determine if further Investigations are required under the planning regime and to protect clients from any future liabilities. The report will include an executive summary Identifying key Issues and detail 'next step' recommendations.
- Aftercare, including a detailed discussion with the Contaminated Land Officer/planning officer to discuss the proposed methodologies and scope of such works of further works (if required), to ensure that planning conditions relating to land contamination can be met and complied with fully.

We have been informed that there are proposals to extend the existing hotel to comprise a 34-bedroom extension, including the reconfiguration of the existing car park, landscaping, and associated works. This assessment is required in support of the planning application.

Summary of Findings

Summary - Historical Review

This section includes a review of available historical mapping and recent aerial photography for the Site and surrounding area. A review of Landmark data (ref. 351381504) has also been carried out, with pertinent information summarised below.

Overview	Details
Historical on-site	A review of historical maps, dating from 1851, indicates that at this time, the Site formed part of open land. This remained until the 2006 map edition when the current hotel was developed in the west with the east occupied by the associated car park. In the 2024 map edition, a separate extension to the hotel was noted in the west of the Site. Aerial photograph dated 2001 indicates that the Site was being prepared for development. Pre-application advice from the Local Planning Authority (LPA) reviewed that the current hotel was developed under planning consent 99/D336905. The extension was developed under consent 04/D44181 permitted in 2004. A review of the environmental data pack has reviewed no records of former waste facilities, landfilling, permits, pollution incidents, or inactive contemporary trade directories on Site.
Historical off-site	A review of historical maps dating from 1851 shows the following potentially contaminative uses within 250m of the Site: • Fustian Mill 238m west in the 1851 map edition, noted as a cotton mill from the 1930 map edition, in disuse in the 1937 map edition, and demolished in the 1956 map edition • A builder's yard 238m west in the 1984 map edition to current mapping. • A woollen water mill with associated tanks, filter beds, tenters, and reservoirs 90m east in the 1893 map edition, entering disuse in the 1930 map edition, and then demolished in the 1959 map edition. • A tanning extract mill 87m east in the 1937 map edition, noted as a works in the 1959 map edition, and then demolished in the 1975 map edition. • A filling station 68m north in the 1958 map edition, noted as a garage in the 1982 map edition to current mapping. • Another filling station 107m north in the 1982 map edition to current mapping. The following pertinent former permits, historical landfills/waste facilities, and inactive trade directories have been identified in proximity to the Site: • A revoked environmental permit for a petrol filling station 118m north associated with Rock Service Station (Shell). • A registered landfill buffer 164m west associated with Clough Mill Reservoir under licence 00615/90. This dated 01/10/80, the license is inactive and authorised waste included uncontaminated excavated natural spoil. This likely related to a reservoir 288m west noted in the 1851 map edition. This is beyond 250m and so has not been considered further in our assessment. • Inactive notable contemporary trade directories include engineering services (IPM) 84m south, printing equipment manufacturers and machinery - industrial and commercial (The Mailing Room) 84m south, mailing machines and equipment (The Mailing Room) 85m south, a petrol filling station (Esso) 101m north, cutlery manufacturers (Zeva Mundial) 97m southeast, and chemical manufacturers (Cognis UK) 117m south.

Summary - Current Review

This section includes a current overview of the Site and surrounding area using information gathered from the Site walkover (undertaken by Samuel Hackett on 09/07/24) and Landmark data (ref. 351381504).

Summary of Findings

Overview

On-Site Overview - Site Description

The Site is occupied by Village Hotel Manchester Bury, and is in use as a purpose-built hotel and associated activities (e.g., gym)

The hotel is in the west separated into the main hotel and an extension, linked by an overhead bridge.

The main hotel comprises of 98-bedrooms, reception, café, restaurant with associated kitchen, service areas, and a gym/leisure area. This has two waste areas, one in the north associated with a delivery area, and another in the south enclosed by a timber fence. Both waste areas are occupied by general waste wheelie bins and smaller recycling wheelie bins.

The extension consists of 28-bedrooms only.

A single-storey service building is in the southwest, occupied by two electrical sub stations and a gas governor room.

The hotel is surrounded by an access road which links to the car park occupying the east of the Site.

Development area

Specifically for the development area, this forms part of the above access road, car parking spaces, and the timber fenced waste area.

The Site representative confirmed that there had been no pollution incidents or major flooding issues at the Site.

Surface Conditions

All internal areas are covered in hardstanding. The car park and access road are covered in good quality tarmac. The Site has a vegetative border and more open space in the west.

No evidence of vegetative die-back was identified.

No evidence of contamination was identified.

Site Topography

The Site is generally flat.

Drainage and Services

The Site is connected to mains and the foul sewer network.

No drainage plan has been made available for review.

Environmental data

A review of the environmental data pack has reviewed no records of current waste facilities, landfilling, or permits.

One contemporary trade directory was identified as follows: Distribution Services, Roptec Ltd, at Unit C1, Waterfold Park. Having reviewed this entry, this relates to premises off-Site.

Off-site overview

Adjacent and nearby land uses include:

- North: Adjacent is vegetation with the River Roch 10m north. Beyond the River Roch it slopes upwards with housing 53m north, a garage 64m north, Rochdale Road 94m north, a filling station 107m north, and then housing and a school.
- South: Adjacent is Waterford Business Park.
- East: Adjacent is an access road, then the M66 71m east with open land and housing beyond.
- West: Adjacent is vegetation with the River Roch 10m west. Beyond the River Roch is a park 67m west and a school 150m west.

Summary of Findings

The following pertinent current permits, historical landfills/waste facilities, and inactive trade directories have been identified in proximity to the Site:

- An active permit for a filling station 120m north associated with Motorway Filling Service Station.
- A fuel station entry 119m north associated with Motorway Filling Station.
- Notable active contemporary trade directories include scientific apparatus and instruments – manufacturers (Sympatec) 36m southeast, engineering services (IPM) 36m southeast, printing equipment manufacturers (The Mailing Room) 84m south, industrial sewing machines (College Sewing Machine Parts Ltd) 50m southwest, car dealers (Motorpark Bury) 85m north, another (Renault Bury) 86m northwest, and a petrol filling station (Esso) 119m north.

Below we have detailed potential contamination sources identified from the Site visit.

Feature

Above-ground Storage Tanks (ASTs)

None identified.

The Site representative confirmed that the Site has no oil/diesel ASTs and/or associated generators.

Underground Storage Tanks (USTs)

None identified.

The Site representative confirmed that the Site has no oil/diesel USTs.

Other Hazardous Material Storage

None identified.

The Site representative confirmed that no bulk use of hazardous materials/substances are used.

Hazardous Waste Storage and Disposal

None identified.

The Site representative confirmed that no hazardous wastes are generated.

Asbestos Containing Materials (ACMs) in Building

ACMs are not expected as the current hotel was developed after 1999.

Regulatory Consultation

This section details the responses from consultation with the appropriate authorities along with any pertinent planning information.

Regulator	Response
Local Authority: Online planning records	We reviewed Bury Council's online planning portal. The following pertinent consents were identified: • Ref 43380 for a 28-bedroom 4-storey link extension to rear of existing hotel. This was approved 06/10/24. No documentation was available to review.

Summary of Findings

Third party report review

This section details the review of any pertinent third-party reports either provided by the client or obtained from a public source.

Document	Details
Pre-application advice	Bury Council provided pre-application advice to Pegasus Group 05/02/24 regarding a proposed extension to the existing hotel. This provided the following pertinent information: • There are no environmental designations or listed buildings at the Site. • The hotel was developed under planning permission 99/D336905 for a 98-bedroom hotel and leisure facilities with associated parking. • Following this, an extension to the hotel, to accommodate 28 bedrooms to the rear of the existing hotel was permitted in September 2004 (reference 04/D44181). This was a revised proposal from an application permitted in 2003 (reference 03/D42737).

Other considerations

Our assessment is focussed on the risk from contaminants in, on, or under the ground. However, the following aspects have been considered to meet the requirements of LCRM guidance.

Item	Details
Mining (including coal)	The Site lies within a Coal Mining Affected Area. No other mining feature has been identified.
General natural background contamination	The BGS Estimated Soil Chemistry data indicates the following background concentrations expected at the Site: • Arsenic: 15-25 mg/kg • Cadmium: <1.8 mg/kg • Chromium: 60-90 mg/kg • Lead: <100 mg/kg • Nickel: 30-45 mg/kg Background contamination levels for the above contaminants are below relevant Generic Assessment Criteria (GACs) (S4ULs and C4SL) for a commercial end use. As such, we have not considered these sources further.
Radon gas	Radon is a colourless, odourless radioactive gas, formed by the radioactive decay of small amounts of uranium that occur naturally in all rocks and soils. The property is in a Lower probability radon area (less than 1% of homes are estimated to be at or above the Action Level). No radon protective measures are necessary in the construction of new dwellings or extensions You should consult your Local Building Control department about specific requirements in your area.
Invasive species	No obvious signs of invasive species* were identified during the Site walkover, and the Site representative/client is not aware of the presence of any invasive species. However, you would need a specialist to confirm this. *Invasive species we have limited to Japanese Knotweed, Himalayan balsam, New Zealand pigmyweed and Giant hogweed

Summary of Findings

Potential for Asbestos Containing Materials (ACMs) in buildings	ACMs are not expected as the current hotel was developed after 1999.
Unexploded ordnance (UXO)	The Construction (Design and Management) Regulations require the identification of health and safety hazards and risks, which includes assessing the potential for the Site to contain or have been affected by unexploded ordnance. A preliminary UXO assessment should be carried out as part of the re/development of the Site to identify if a detailed unexploded risk assessment is needed. Following this, you may need to put relevant measures in place.

Site Sensitivity

The following information on site sensitivity has been obtained from BGS online geological map viewer, as well as Landmark data (data pack ref. 351381504).

Geology

Feature	Details
Made Ground	A significant thickness of made ground is not expected at the Site. Any made ground will likely comprise of unsorted anthropogenic material including natural soils, tarmac, concrete, and possible brick/glass fragments.
Superficial Deposits	Alluvium - General term for clay, silt, sand and gravel. It is the unconsolidated detrital material deposited by a river, stream or other body of running water as a sorted or semi-sorted sediment in the bed of the stream or on its floodplain or delta, or as a cone or fan at the base of a mountain slope.
Bedrock Geology	Pennine Lower Coal Measures Formation - Interbedded grey mudstone, siltstone and pale grey sandstone, commonly with mudstones containing marine fossils in the lower part, and more numerous and thicker coal seams in the upper part.
BGS Borehole Records	No boreholes have been recorded on Site.
Geological Faults	The Site is not near a geological fault.

Hydrogeology and Hydrology

Feature	Details
Superficial deposits	Secondary Aquifer - A (moderate permeability) Comprise permeable layers that can support local water supplies and may form an important source of base flow to rivers.
Bedrock geology	Secondary Aquifer - A (moderate permeability) Comprise permeable layers that can support local water supplies and may form an important source of base flow to rivers.
Groundwater vulnerability	The combined groundwater vulnerability to pollutants has been identified as low.
Abstractions	There are currently no licensed groundwater and surface water abstractions located within 250m of the Site.
Source Protection Zones and Safeguard Zones	The Site does not lie within a groundwater Source Protection Zone or safeguard zone.

Summary of Findings

Water features	The nearest water feature is the River Roch 10m north. This river snakes around the Site, with flow from northeast to southwest. Shallow groundwater on Site is anticipated to flow towards the River Roch.
-----------------------	--

Human Health and Eco Receptors

Feature	Details
Site Users	An extension is proposed on Site. Therefore, groundworkers and end users are considered sensitive receptors.
Buildings/Services	The Site is connected to mains water supply.
Third Parties	The nearest residential properties are located 53m north. These are the opposite bank of the River Roch.
Eco Receptors	No designated eco receptors were identified within 500m.
Other Sensitive Land Uses	No archaeological or heritage sites such as scheduled ancient monuments, have been identified on Site.

Risk Assessment

Potential Contamination Sources

The following potential contamination sources have been identified.

Source	Associated contaminants
On Site	
None identified	
Off Site	
Fustian Mill/cotton mill 238m west c.1851-c.1937.	Petroleum hydrocarbons (PHs), polycyclic aromatic hydrocarbons (PAHs), volatile/semi-volatile organic compounds (V/SVOCs) (e.g., solvents), heavy metals, inorganic compounds (e.g., borates), acids, and alkalis.
A builder's yard 238m west c.1984 to present day.	PHs, PAHs, V/SVOCs, and heavy metals.
A woollen water mill 90m east c.1893-c.1930.	
A tanning extract mill/works 87m east c.1937-c.1975.	PHs, PAHs, V/SVOCs (e.g., solvents), heavy metals, acids, and alkalis.
A filling station 68m north c.1958 later a garage c.1982 to present day.	PHs, V/SVOCs, BTEXs, asbestos, heavy metals, inorganic compounds, anti-freeze (e.g., ethylene glycol), brake fluids (e.g., polymerised glycols and ethers), acids and alkalis.
Filling station with an environmental permit 107m north c.1982 to present day.	PHs, V/SVOCs, and lead
Current and former businesses associated with Waterford Business Park including engineering services, printing equipment manufacturers, machinery - industrial and commercial, mailing machines and equipment, cutlery manufacturers, chemical manufacturers, scientific apparatus and instruments – manufacturers, industrial sewing machines, and car dealers.	PHs, PAHs, V/SVOCs (e.g., solvents), heavy metals, acids, and alkalis.

Potential Pathways and Receptors

Potential pathways considered are human uptake (dermal contact, ingestion, inhalation), diffusion, vertical migration, lateral migration, surface run-off, building contact, and plant uptake. In addition, shallow groundwater in the area is anticipated to be flowing towards the River Roch in a northwesterly/westerly direction.

The following receptors have been identified.

Receptor	Comments
Human Health	The Site is currently in use as a hotel. An extension is proposed on Site. Therefore, groundworkers and end users are considered sensitive receptors. The nearest residential properties are located 53m north. These are the opposite bank of the River Roch.
Buildings/services	The Site is connected to the mains water supply.

Summary of Findings

Groundwater	The superficial and bedrock hydrogeology are classified as Secondary Aquifers – a (Alluvium and Pennine Lower Coal Measures Formation). No groundwater abstractions have been identified within 250m. The Site does not lie within a groundwater Source Protection Zone or Safeguard Zone. Shallow groundwater on Site is anticipated to flow towards the River Roch.
Surface water	The nearest water feature is the River Roch 10m north. This river snakes around the Site, with flow from northeast to southwest. No surface water abstractions have been identified within 250m.
Eco receptors	No designated eco receptors were identified within 500m.
Other sensitive land uses	No archaeological or heritage sites such as scheduled ancient monuments, have been identified on Site.

Conceptual Site Model

Below is the Conceptual Site Model which explores the environmental risk at the Site. For the statutory definition of contaminated land, a Very High or High risk are most likely to represent contaminated land, a Moderate or Moderate/Low risk represents potentially contaminated land, and a Low and Very Low risk represents land which is unlikely to be designated contaminated land.

Contaminant	Pathway	Receptor	Severity	Probability	Risk
Fustian Mill/cotton mill 238m west c.1851-c.1937. A builder's yard 238m west c.1984 to present day. <i>PHs, PAHs, V/SVOCs (e.g., solvents), heavy metals, inorganic compounds (e.g., borates), acids, and alkalis.</i>	Vertical migration Lateral migration	Human Health Buildings/ services Groundwater Surface water	Mild	Unlikely	Very Low
Comment A review of historic mapping identified the following potentially contaminative land uses to the west and within 250m of the Site: Fustian Mill/cotton mill 238m west c.1851-c.1937, and a builder's yard 238m west c.1984 to present day. Upon review, no plausible significant contaminant linkage has been identified for the following reasons: - Contaminants arising from these premises would need to have a high mobility in groundwater (e.g., dissolvable) to migrate onto the Site within the aquifer. Therefore, contaminants with low mobility (e.g., benzo(a)pyrene) could not impact the Site. - The sources are 238m away. Therefore, any contaminants within the aquifer are likely to have undergone natural attenuation processes and dispersion. This significantly reduces the probability of contaminants migrating onto the Site in significant concentrations. - The River Roch lies between the Site and these sources. This would act as a significant barrier for contaminants to migrate onto the Site and shallow groundwater is likely to have some hydraulic connection with the River Roch.					

Contaminant	Pathway	Receptor	Severity	Probability	Risk
A woollen water mill 90m east c.1893-c.1930. A tanning extract mill/works 87m east c.1937-c.1975.	Vertical migration Lateral migration	Human Health Buildings/ services Groundwater Surface water	Mild	Unlikely	Very Low

Summary of Findings

PHs, PAHs, V/SVOCs (e.g., solvents), heavy metals, acids, and alkalis.

Comment

A review of historic mapping identified the following potentially contaminative land uses to the east and within 250m of the Site: a woollen water mill 90m east c.1893-c.1930, a tanning extract mill/works 87m east c.1937-c.1975. Contaminants have the potential to migrate onto the Site within the underlying aquifer. Therefore, a plausible contaminant linkage was initially identified.

Upon review, no plausible significant contaminant linkage has been identified for the following reasons:

Significance of sources

The woollen water mill ceased operations at least 90 years ago, with the tanning extract mill/works demolished ~50 years ago. As such, it is expected that some contaminants (e.g., PHs) have natural attenuation processes and dispersion. This significantly reduces the probability of contaminants migrating onto the Site in significant concentrations.

Risk to human health

Should any residual contaminants be present in the ground, the whole Site is covered in concrete hardstanding. This would act as an effective barrier between any residual contaminants in the ground and Site users.

In addition, groundworkers are expected to wear appropriate PPE as required under the Construction (Design and Management) Regulations 2015.

Contaminant	Pathway	Receptor	Severity	Probability	Risk
A filling station 68m north c.1958 later a garage c.1982 to present day.	Vertical migration	Human Health	Medium	Unlikely	Low
Filling station with an environmental permit 107m north c.1982 to present day.	Lateral migration	Buildings/ services			
PHs, V/SVOCs, BTEXs, asbestos, heavy metals, inorganic compounds, anti-freeze (e.g., ethylene glycol), brake fluids (e.g., polymerised glycols and ethers), acids and alkalis.		Groundwater			
		Surface water			

Comment

A filling station was 68m north c.1958 before becoming a garage c.1982 and is there to present day. In addition, a current filling station is 107m north. Contaminants have the potential to migrate onto the Site within the underlying aquifer. Therefore, a plausible contaminant linkage was initially identified.

Upon review, no plausible significant contaminant linkage has been identified for the following reasons:

- These premises are located above the Site and the River Roch lies between the Site and these premises. These factors would act as a significant barrier for contaminants to migrate onto the Site.
- Shallow groundwater is likely to have some hydraulic connection with the River Roch, and so dissolvable contaminants (e.g., PHs) would likely flow directly into the River Roch rather than migrate to the Site (preferential pathway).

Contaminant	Pathway	Receptor	Severity	Probability	Risk
Current and former businesses associated with Waterford Business Park including engineering services, printing equipment manufacturers, machinery - industrial and commercial, mailing machines and equipment, cutlery	Vertical migration	Human Health	Mild	Unlikely	Very Low
	Lateral migration	Buildings/ services			
		Groundwater			
		Surface water			

Summary of Findings

manufacturers, chemical manufacturers, scientific apparatus and instruments – manufacturers, industrial sewing machines, and car dealers.

PHs, PAHs, V/SVOCs (e.g., solvents), heavy metals, acids, and alkalis.

Comment

Waterford Business Park is located adjacent south. While this is predominantly occupied for office space, some buildings are in light industrial use. Current and former businesses associated with Waterford Business Park include engineering services, printing equipment manufacturers, machinery - industrial and commercial, mailing machines and equipment, cutlery manufacturers, chemical manufacturers, scientific apparatus and instruments – manufacturers, industrial sewing machines, and car dealers. Contaminants have the potential to migrate onto the Site within the underlying aquifer. Therefore, a plausible contaminant linkage was initially identified.

Upon review, no plausible significant contaminant linkage has been identified for the following reasons:

Significance of sources

Waterford Business Park is purpose built and developed around the same time as the current hotel. Therefore, it is expected that the entire estate has appropriate hardstanding to minimise contaminants entering the ground, along with appropriate drainage. This significantly reduces the probability of contaminants migrating onto the Site in significant concentrations.

In addition, it is not expected that any significant operations have occurred, given the size of the light industrial buildings.

Risk to human health

Should any residual contaminants be present in the ground, the whole Site is covered in concrete hardstanding. This would act as an effective barrier between any residual contaminants in the ground and Site users.

In addition, groundworkers are expected to wear appropriate PPE as required under the Construction (Design and Management) Regulations 2015.

Conclusion

Low risk

Summary of Risk Assessment

The Site remained as open land until the early 2000s when it was developed as a hotel. The hotel has no oil/diesel storage and no generator, and so no credible source of contaminants have been identified on Site.

Some historic and current sources of contaminants have been identified in proximity to the Site. However, upon review of these sources in conjunction with the hydrogeological characteristics of the Site and wider area, no plausible significant contaminant linkage has been identified.

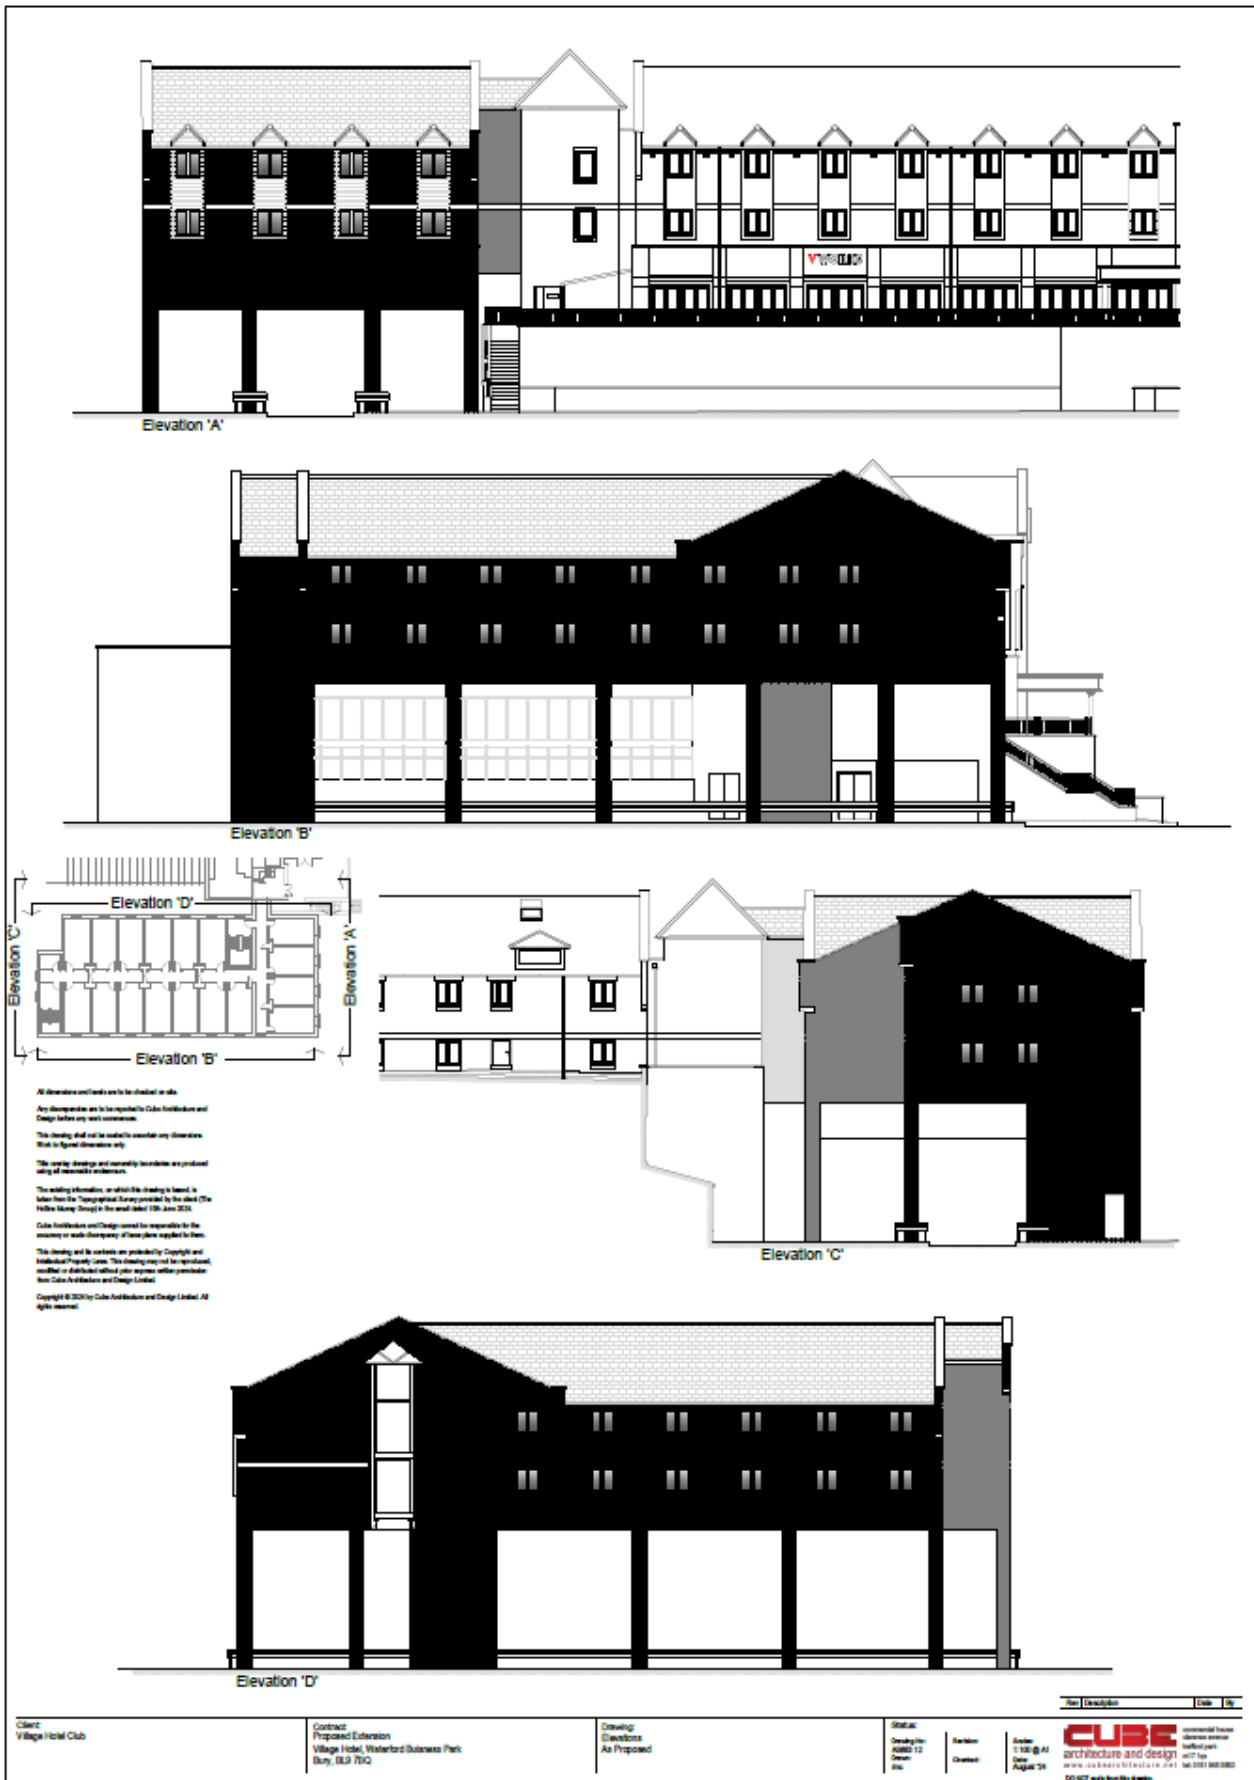

Recommendations

Actions

1. The Phase I should be submitted to the Local Authority for consideration.
2. If any contamination is identified during re/development, all work must cease and you must alert the Local Authority.

Data

Risk Analysis Methodology

Our Phase One Planning report is a Preliminary Risk Assessment designed in line with Land Contamination Risk Management (LCRM) published by the Environment Agency. It has been carried out with due regard to industry guidance and code of practices including, but not limited to, CIRIA C552 (Contaminated land risk assessment. A guide to good practice), and BS 10175:2011+A2:2017 (Investigation of potentially contaminated sites) and associated guidance documents published by the British Standards Institute (the BSI). We follow an evidence and risk-based approach in our assessment.

Liabilities for contaminated land in England and Wales are primarily set out under Part 2A of the Environmental Protection Act 1990. Where re/development is taking place, the assessment and any necessary remediation is carried out under the statutory planning regime. The main policy document is the National Planning Policy Framework (NPPF) which sets out the principles that local planning authorities should follow when determining planning applications for contaminated or potentially contaminated land. The key paragraphs for contamination are 189 and 190 which read:

'189. Planning policies and decisions should ensure that:

- a) a site is suitable for its proposed use taking account of ground conditions and any risks arising from land instability and contamination. This includes risks arising from natural hazards or former activities such as mining, and any proposals for mitigation including land remediation (as well as potential impacts on the natural environment arising from that remediation);*
- b) after remediation, as a minimum, land should not be capable of being determined as contaminated land under Part IIA of the Environmental Protection Act 1990; and*
- c) adequate site investigation information, prepared by a competent person, is available to inform these assessments.*

190. Where a site is affected by contamination or land stability issues, responsibility for securing a safe development rests with the developer and/or landowner.'

The interpretation of the wording "significant risk" within the context of existing legislation is based on the following:

'Significant harm is being caused or there is a significant possibility of such harm being caused, (where harm is defined as harm to health of living organisms or other interference with the ecological systems of which they form a part and, in the case of man, includes harm to his property); and/or, significant pollution of Controlled Waters is being caused or there is a significant possibility of such pollution being caused'.

We assess potential risks qualitatively using the 'contaminant-pathway-receptor linkage' concept introduced in the EPA 1990. Where a 'source' is a source of contaminants, a 'pathway' a medium through which the contamination can mobilise, and 'a receptor' a person or entity that could be detrimentally affected by the contamination. Where each of these elements is present, it is considered that a potential contaminant linkage exists at the Site.

Methodology

CIRIA 552 Contaminated Land Risk Assessment Guide and NHBC Guidance for the Safe Development of Housing on Land Affected by Contamination.

Classification of consequence:

Classification	Definition
Severe	Highly elevated concentrations likely to result in "significant harm" to human health as defined by the EPA 1990, Part 2A, if exposure occurs. Equivalent to EA Category 1 pollution incident including persistent and/or extensive effects on water quality; leading to closure of a potable abstraction point; major impact on amenity value or major damage to agriculture or commerce. Major damage to aquatic or other ecosystems, which is likely to result in a substantial adverse change in its functioning or harm to a species of special interest that endangers the long-term maintenance of the population. Catastrophic damage to crops, buildings or property.
Medium	Elevated concentrations which could result in "significant harm" to human health as defined by the EPA 1990, Part 2A if exposure occurs. Equivalent to EA Category 2 pollution incident including significant effect on water quality; notification required to abstractors; reduction in amenity value or significant damage to agriculture or commerce. Significant damage to aquatic or other ecosystems, which may result in a substantial adverse change in its functioning or harm to a species of special interest that may endanger the long-term maintenance of the population. Significant damage to crops, buildings or property.
Mild	Exposure to human health unlikely to lead to "significant harm". Equivalent to EA Category 3 pollution incident including minimal or short lived effect on water quality; marginal effect on amenity value, agriculture or commerce. Minor or short lived damage to aquatic or other ecosystems, which is unlikely to result in a substantial adverse change in its functioning or harm to a species of special interest that would endanger the long-term maintenance of the population. Minor damage to crops, buildings or property.
Minor	No measurable effect on humans. Equivalent to insubstantial pollution incident with no observed effect on water quality or ecosystems. Repairable effects of damage to buildings, structures and services.

Classification of probability:

Category	Definition
High likelihood	There is pollutant linkage and an event would appear very likely in the short-term and almost inevitable over the long-term, or there is evidence at the receptor of harm or pollution.
Likely	There is pollutant linkage and all the elements are present and in the right place which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short-term and likely over the long-term.
Low likelihood	There is pollutant linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a long period such an event would take place, and is less likely in the shorter term.
Unlikely	There is pollutant linkage but circumstances are such that it is improbable that an event would occur even in the very long-term.

Note: A pollution linkage must first be established before probability is classified. If there is no pollution linkage then there is no potential risk. If there is no pollution linkage then there is no need to apply tests for probability and consequence.

Methodology

Classification of risk:

Probability (Likelihood)	Consequence			
	Severe	Medium	Mild	Minor
High likelihood	Very high risk	High risk	Moderate risk	Low risk
Likely	High risk	Moderate risk	Moderate/Low risk	Low risk
Low likelihood	Moderate risk	Moderate/Low risk	Low risk	Very low risk
Unlikely	Moderate/Low risk	Low risk	Very low risk	Very low risk

Description of the classified risks:

Term	Description
Very high risk	There is a high probability that severe harm could arise to a designated receptor from an identified hazard at the site without remediation.
High risk	Harm is likely to arise to a designated receptor from an identified hazard at the site without appropriate remediation action.
Moderate risk	It is possible that without appropriate remediation action harm could arise to a designated receptor. It is relatively unlikely that any such harm would be severe, and if any harm were to occur it is more likely that such harm would be relatively mild.
Low risk	It is possible that harm could arise to a designated receptor from an identified hazard. It is likely that, at worst if any harm was realised any effects would be mild.
Very low risk	The presence of an identified hazard does not give rise to the potential to cause harm to a designated receptor.

Reliance

Argyll Environmental (part of Landmark Information Group Limited) has prepared this Phase One Planning report with all reasonable skill, care and diligence under: Argyll Environmental Conditions of Contract for Environmental Consultancy Services, January 2022, Version 3. This report has been prepared solely and exclusively for VUR Village Trading No 1 Limited. If reliance on this report is required by a third party, this may be arranged for an agreed fee.

Limitations

We have exercised such professional skill, care and diligence as expected by a 'competent person' as defined in the National Planning Policy Framework. However, we give no warranty, representation, or assurance as to the accuracy or completeness of any information, assessments or evaluations presented within this report. We accept no liability whatsoever for any loss or damage arising from the interpretation or use of the information contained within this report.

We accept no responsibility for the accuracy or completeness of third-party data reviewed within this assessment. Copies of the third-party data used in this report can be provided upon request (subject to any copyright limitations).

We do not include a physical investigation of the ground beneath the Site or its infrastructure. Therefore, it cannot be guaranteed that all land uses, or issues of concern will have been identified by this report.

Where we have provided budget estimates, the figures we have identified are based on documentation gathered on the Site and discussions with Site management. We are unable to warrant the accuracy of these figures and you are recommended to seek appropriate quotations where reliance on a budget estimate is required.

Methodology

The scope of our report does not include an assessment of the presence of asbestos containing materials within or below buildings at the Site, geotechnical considerations, buried services, unexploded ordnance, or invasive plants.

Complaints

This search has been produced by Landmark Information Group Limited, trading as Argyll Environmental, 1st Floor, 98 - 99 Queens Road, Brighton, BN1 3XF.

Tel: 0330 036 6115

Email: argyll@landmark.co.uk

If you have a query or complaint about your search, you should raise it directly with the search firm, and if appropriate ask for any complaint to be considered under their formal internal complaints procedure.

Argyll Environmental Complaints Procedure

If you want to make a complaint to Argyll Environmental (Part of Landmark Information Group), we will:

- Acknowledge it within 5 working days of receipt
- Normally deal with it fully and provide a final response, in writing, within 20 working days of receipt
- Keep you informed by letter, telephone or e-mail, as you prefer, if we need more time
- Provide a final response, in writing, at the latest within 40 working days of receipt
- Liaise, at your request, with anyone acting formally on your behalf

Complaints should be sent to:

Landmark Information Group Limited, trading as Argyll Environmental
1st Floor
98 - 99 Queens Road
Brighton
BN1 3XF

Tel: 0330 036 6115

Email: argyll@landmark.co.uk

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

	County & Civil Parish Boundary				
	Administrative County & Civil Parish Boundary				
	County Borough Boundary (England)				
	County Burgh Boundary (Scotland)				
	Rural District Boundary				
	Civil Parish Boundary				

Ordnance Survey Plan 1:10,000

	Chalk Pit, Clay Pit or Quarry		Gravel Pit
	Sand Pit		Disused Pit or Quarry
	Refuse or Slag Heap		Lake, Loch or Pond
	Dunes		Boulders
	Coniferous Trees		Non-Coniferous Trees
	Orchard		Scrub
	Bracken		Heath
	Marsh		Reeds
	Building		Glasshouse
	Sloping Masonry		Pylon
	Cutting		Embankment
	Road Under		Road Over
	Level Crossing		Foot Bridge
	Standard Gauge Multiple Track		Standard Gauge Single Track
	Siding, Tramway or Mineral Line		Narrow Gauge
	Geographical County		Administrative County, County Borough or County of City
	Municipal Borough, Urban or Rural District, Burgh or District Council		Borough, Burgh or County Constituency
	Civil Parish		
	BP, BS Boundary Post or Stone		Police Station
	Church		Post Office
	Club House		Public Convenience
	Fire Engine Station		Public House
	Foot Bridge		Signal Box
	Fountain		Spring
	Guide Post		Telephone Call Box
	Mile Post		Telephone Call Post
	Mile Stone		Well

1:10,000 Raster Mapping

	Gravel Pit		Refuse tip or slag heap
	Rock		Rock (scattered)
	Boulders		Boulders (scattered)
	Shingle		Mud
	Sand		Sand Pit
	Slopes		Top of cliff
	General detail		Underground detail
	Overhead detail		Narrow gauge railway
	Multi-track railway		Single track railway
	County boundary (England only)		Civil, parish or community boundary
	District, Unitary, Metropolitan, London Borough boundary		Constituency boundary
	Area of wooded vegetation		Non-coniferous trees
	Non-coniferous trees (scattered)		Coniferous trees
	Coniferous trees (scattered)		Positioned tree
	Orchard		Coppice or Osiers
	Rough Grassland		Heath
	Scrub		Marsh, Salt Marsh or Reeds
	Water feature		Flow arrows
	Mean high water (springs)		Mean low water (springs)
	Telephone line (where shown)		Electricity transmission line (with poles)
	Bench mark (where shown)		Triangulation station
	Point feature (e.g. Guide Post or Mile Stone)		Pylon, flare stack or lighting tower
	Site of (antiquity)		Glasshouse
	General Building		Important Building

Published 1851

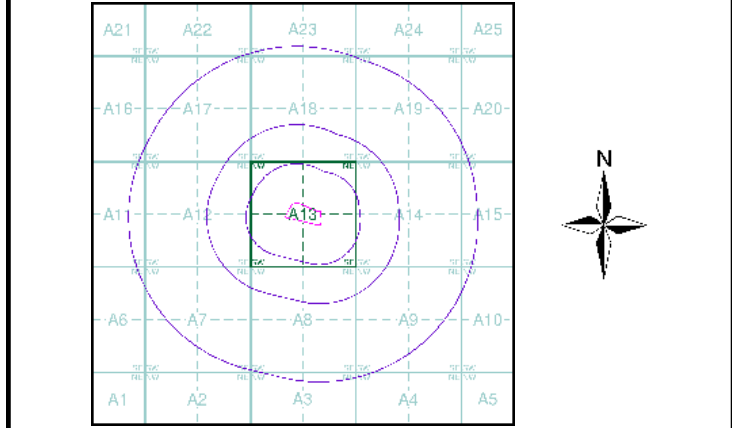

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.
