APPENDIX A	-	DRAWINGS
APPENDIX B	-	LANDMARK ENVIROCHECK REPORT
APPENDIX C	-	LANDMARK HISTORICAL MAPS
APPENDIX D	-	COAL AUTHORITY CONSULTANTS MINING REPORT
APPENDIX E	-	ZETICA UNEXPLODED BOMB RISK MAP
APPENDIX F	-	PRELIMINARY RISK RATING GUIDANCE

1.0 INTRODUCTION

- 1.1 The Land Consultancy Limited (TLC) has been commissioned by Mr Imran Mohammed, of Avanti Developments Ltd (e-mail dated 7th February 2023), to complete a Phase 1 geo-environmental desk study report for land associated with the following property: 3 Clover Street, Rochdale OL12 6TP. The site boundary (edged in red) is indicated on Drawing No. TLC1216/02a in Appendix A.
- 1.2 The site is scheduled to be developed out with a 3/4 storey apartment block. No landscaping or managed garden areas are scheduled. Proposed development plans/elevations are presented in Drawing Nos. TLC1216/03a to 03d in Appendix A.
- 1.3 The main aim of a Phase 1 desk study is to identify potential environmental issues that may represent a constraint to the proposed redevelopment of a site. The findings of this assessment can be used to determine the scope of a follow-on Phase 2 intrusive site investigation. Geotechnical and mining risks can also be assessed using the desk study report.
- 1.4 TLC's remit for the geo-environmental desk study included the following:
 - Review contemporary and historical Ordnance Survey and geological publications, conduct an environmental database search and obtain and review a Coal Authority Consultants mining report;
 - Complete a site walkover survey;
 - Prepare a conceptual site model and Preliminary Risk Assessment with respect to contamination, shallow mining, geotechnical and ground gas risks; and,
 - From the findings of the conceptual model, determine whether and to what extent site investigation and laboratory testing work are required to enable advice to be given with respect to foundation, floorslab and buried concrete design and mining.

1.5 Limitations

- 1.5.1 The assessment and interpretation of the factual data obtained as part of this desk study has been undertaken in accordance with generally accepted standard consulting practice and with current national and international guidance.
- 1.5.2 This report presents the observations made during the desk study and the factual data obtained. The conclusions and recommendations in this report are limited to those which can be made based on the findings of the survey and information provided by third parties. TLC assumes all third-party data to be true and correct. No responsibility can be accepted by TLC for inaccuracies in the information supplied by any other party.
- 1.5.3 This report is written in the context of an agreed scope of work and should not be used in a different context. Furthermore, new information, improved practices and changes in legislation may require a re-interpretation of the report in whole or in part after its original issue. TLC reserves the right to alter their conclusions and recommendations in the light of further information that may become available. This report is provided for the sole use of the Client and is confidential to them and their professional advisers unless agreed otherwise in writing.

2.0 SITE LOCATION AND DESCRIPTION

- 2.1 The site is located within a mixed residential/commercial setting and is situated $\approx 385\text{m}$ NW of Rochdale town hall. The property can be centred at the following coordinates: 389340E, 413570N, and is accessed directly from Clover Street which forms the site's northern boundary. Holland Street is located $\approx 20\text{m}$ south-east of the property.
- 2.2 General site location plans are presented in Drawing Nos. TLC1216/01a and 01b in Appendix A; a site boundary plan is presented in Drawing No. TLC1216/02a and a recent Google Earth image of the site, dated April 2021, is presented in Drawing No. TLC1216/02b.
- 2.3 The site is square in shape, orientated NW to SE, and has an area of $\approx 95\text{m}^2$.
- 2.4 The site is situated at an altitude of $\approx 135\text{m}$ AOD. The topography of the site and immediate surrounding area site slopes gently/moderately down to the SE.
- 2.5 A site walkover survey was undertaken on 9th February 2021. The main findings of this survey are presented below:
- A 2/3-storey commercial building resides on the property which was, until recently, occupied by a company called Avanti. This company specialised in colour printing and sign making.
 - The site is completely covered with the building or external hardstanding (rear). 2no. small dilapidated lean-to buildings occupy the rear yard area. The rear yard area is partly overgrown and contains numerous young trees (possible willow).
 - A church building is located immediately to the east. Land adjacent west comprises of tarmacadam hardstanding. Office space is situated just to the south-west; a taxi rank is also situated to the south-west which appears to be occupying a former garage area. A laundrette is located just beyond Clover Street to the north-east of the site.
 - No potentially invasive plant species were observed to be growing (e.g. Japanese Knotweed, Himalayan Balsam, Giant Hogweed etc).
 - No asbestos containing materials were observed during the site walkover. No ashy Made Ground deposits were observed.
 - No visible or olfactory evidence for the presence of mobile contamination (e.g. hydrocarbons/solvents) was recorded.
- 2.6 Selected site photographs taken during the walkover survey are presented in Drawing No. TLC1216/04 in Appendix A.

3.0 SITE HISTORY

3.1 Copies of the following Ordnance Survey (OS) plans have been sourced from Landmark and are reproduced in Appendix C.

3.2 The site history is summarised below:

Date	Historical Land use	
	Site	Adjacent areas (compass dir ⁿ) – within 250m
1851	Site is undeveloped – falls within a field.	Fields – 0m N, 0m E, 0m S & 0m W. Land 0m SW labelled as a Rope Walk. Church – 15m E; associated Graveyard – 20m E. Timber Yard – 40m NE. Gravel Pit – 40m N. Mills (cotton & woollen, or just cotton) – 80m S, 120m NE, 170m S & 210m SW. Mill Reservoir – 130m NE. Town Mill – 150m SW. Brewery – 210m SW. Dye Works – 150m SW.
1892 & 1893	Site contains 2no. adjoining small buildings adjacent to Clover Street which together make an 'L' shape. Remainder of the site likely to contain a path and possible landscaping.	Extensive development works have taken place around the site. Clover Street – 0m NW. School – 0m NE. Paths/possible landscaping – 0m SE. Buildings of unknown usage – 0m SW. Gravel Pit, Timber Yard, Rope Walk & Graveyard 20m E not shown/labelled. Brewery now a Dye Works. Works building – 30m S. Timber Yards – 95m NE & 185m N.
1910 & 1911	Little significant change.	Works 30m S labelled as a 'Doffing Plate etc' works. Cotton Waste Mill – 105m NW. Warehouses – 115m S & 125m NW. Reservoir to 130m NE has halved in size. Small Reservoir – 200m SW. Corporation Yard – 115m SE. Joinery Factory – 115m NE. Printing Works – 150m E. Smithy – 150m N. Saw Mill – 205m N. Engineering Works – 225m N. Timber Yards 95m NE & 185m N not shown. Dye Works not labelled.
1930 & 1931	No apparent change.	Reservoir to SW not shown. Printing Works to E not shown. Engineering Works and Smithy to N not shown. New Printing Works – 120m NE. Saw Mill – 150m NE. Shirt Factory – 150m E.
1938	No apparent change.	Little significant change within 250m.
1956	No apparent change.	Little significant change within 250m.
1959 & 1960	Small new building added adjacent to NE boundary.	Works – 25m W, several Works >110m N, several Works >125m NE, 135m W, 205m SW, and several Works >230m S. Nature of works not indicated. Warehouses – 120m, 165m W & 240m S. Numerous Allotments – 130m SW. Garage – 160m N. Infilling/upfilling activity has taken place – 110m E, 135m NE (the reservoir is being infilled) & 150m SW. Car Parks – 165m E & 180m S. Abattoir – 195m E. Saw Mills not shown.

Date	Historical Land use	
	Site	Adjacent areas (compass dir ⁿ) – within 250m
1966 - 1968	A small extension has been added to the rear of the building fronting onto Clover Street. The previous small new building is not shown.	Sign Making Works – 0m W. Telephone Exchange – 120m S. All Works/Mill buildings > ≈125m S & SW have been cleared to make way for Rochdale College and a new road layout. The local road network has been significantly modified to the SW, S, SE & E of the site; large amounts of ground reprofiling have taken place to accommodate the new road layout. Closest earthworks to site - ≈35m SE. Many of the Works buildings that do remain are labelled as Engineering Works. Reservoir to NE not shown. Brass Foundry – 180m W. Silk Mill – 190m NE. Water Works Depot – 180m SE.
1972 & 1974	No apparent change.	Garage – 15m SW. Car Park – 205m SW.
1977	No apparent change.	Little significant change within 250m.
1988 & 1990	No apparent change.	Depot – 140m W.
1992 & 1993	No apparent change.	Little significant change within 250m.
1999	No apparent change.	Little significant change within 250m.
2023	No apparent change.	Little significant change within 250m.

- 3.3 Google Earth historical imagery was available to view for the following years: 2000, 2003, 2005, 2013, 2016, 2017, 2018, 2019, 2020, 2021 and 2022.
- 3.4 The imagery indicates that the layout of the site has remained unchanged from 2000 to the present day and that no potentially contaminative new development has taken place in the immediate vicinity of the site during this time.

4.0 ENVIRONMENTAL SETTING

4.1 Data Sources

4.1.1 Unless indicated, the data which has been used to establish the environmental setting of the site has been obtained from the Landmark Envirocheck report presented in Appendix B.

4.2 Geology, Coal Mining, Quarrying and Ground Stability

4.2.1 Geological information pertaining to the site has been obtained from the following sources:

- The British Geological Survey (BGS) 1:50,000 scale Bedrock map for Rochdale (sheet 76) dated 2008;
- The BGS 1:50,000 scale Bedrock and Superficial map for Rochdale (sheet 76) dated 2008;
- The 1:10,560 scale geology plan covering the site (Lancashire Sheet 88NE) dated 1928;
- A Coal Authority CON29M coal mining report (this is presented in Appendix D); and the
- BGS online map viewer (www.mapapps.bgs.ac.uk/geologyofbritain/home.html).

4.2.2 The table below summarises the site geology findings:

MADE GROUND	None indicated on geological mapping.
DRIFT	Devensian Glaciofluvial Deposits Likely to comprise of undifferentiated SAND and GRAVEL with lenses of clay and stony clay. The Glaciofluvial Deposits may be underlain by Devensian Glacial Till (Boulder Clay) at depth. Glacial Till is likely to comprise of a brown sandy gravelly CLAY with variable cobble and boulder content. The drift is likely to be penetrated at depths of between 12-14m (see paragraph 4.2.3 below)
SOLID	Pennine Lower Coal Measures Strata – Undifferentiated strata. Undifferentiated strata often comprise of cyclical sequences of sandstone, siltstone, mudstone, coal seams and seat earths; marine bands and ironstone horizons are also occasionally present.
FAULTING	The property and immediate surrounding area are not affected by known faulting.
ROCK DIP	No BGS rock dips are indicated within at least 1km of the site. However, rock dip is likely to be southerly and shallow (perhaps $\approx 10^\circ$) – from rock dips in the general area.
COAL SEAMS AND COAL MINING	No coal seams are shown to sub-crop beneath the drift within or adjacent to the site boundary. No coal seams are indicated to sub-crop for at least 1km up-dip of the site. It is therefore highly unlikely that shallow coal seams will be present beneath the site. Nearest sub-cropping coal seam - The Arley Coal seam (≈ 70m SW). The strike of this coal seam is NW-SE. This coal seam will not be present beneath the site due to the southerly rock dip. The Coal Authority (CA) Consultants coal mining report indicated that: • No known past underground mining has taken place beneath the site. • The site is not at risk from probable unrecorded shallow workings. • There are no known mine entries recorded within at least 100m of the site. • There are no coal mining related fissures/ breaklines, or known geological faults within the site boundary. • There are no Coal Authority opencast coal mine sites or managed tips within at least 500m of the site. • The CA has not received a damage notice or claim for the site, or any property within 50m of the site boundary, since 31st October 1994. • No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence. • No mine gas emissions have been recorded within at least 500m of the site. It should be noted that CA records are incomplete prior to 1872.

4.2.3 Selected BGS borehole log findings are summarised below:

BGS Log Referenced SD81SE171 – BH22 (Positioned ≈90m to NE)

Cable tool percussion borehole sunk to 12.19m depth by Holst & Co. Ltd in 1968.

g.l. to 0.76m	-	Bricks and Soil. (MADE GROUND)
0.76 to 4.27m	-	Medium dense SAND and GRAVEL.
4.27 to 4.88m	-	Firm brown boulder CLAY.
4.88 to 7.32m	-	Firm brown laminated CLAY.
7.32 to 8.99m	-	Laminated CLAY with sand pockets.
8.99 to 11.88m	-	Stiff brown boulder CLAY.
11.88 to 12.19m	-	SANDSTONE.

No groundwater strikes recorded.

BGS Log Referenced SD81SE169 – BH20 (Positioned ≈100m to NNE)

Cable tool percussion borehole sunk to 12.19m depth by Holst & Co. Ltd in 1968.

g.l. to 0.30m	-	Ash. (MADE GROUND)
0.30 to 1.52m	-	Medium dense SAND and GRAVEL.
1.52 to 3.66m	-	Medium dense SAND and GRAVEL. Occasional large gravel.
3.66 to 4.72m	-	Stiff grey boulder CLAY and sand.
4.72 to 6.40m	-	Loose brown SAND.
6.40 to 8.53m	-	Grey laminated CLAY and bands of sand.
8.53 to 10.21m	-	Grey silty SAND.
10.21 to 11.73m	-	Stiff grey boulder CLAY.
11.73 to 12.19m	-	Hard yellow SANDSTONE.

No groundwater strikes recorded.

BGS Log Referenced SD81SE168 – BH19 (Positioned ≈100m to N)

Cable tool percussion borehole sunk to 12.19m depth by Holst & Co. Ltd in 1968.

g.l. to 0.23m	-	Stone sets. (MADE GROUND)
0.23 to 3.05m	-	Loose SAND and GRAVEL.
3.05 to 3.66m	-	Fine SAND and a little gravel.
3.66 to 4.88m	-	Medium dense SAND and GRAVEL.
4.88 to 6.10m	-	Firm brown boulder CLAY.
6.10 to 7.62m	-	Firm brown boulder CLAY with lenses of fine sand.
7.62 to 8.84m	-	Compact SAND.
8.84 to 10.97m	-	Firm brown laminated CLAY.
10.97 to 12.19m	-	Stiff brown boulder CLAY.
12.19 to 12.50m	-	SANDSTONE.

Groundwater strike made at 7.77m depth.

BGS Log Referenced SD81SE11 – BH9 (Positioned ≈125m to SW)

Hole sunk to 67.77m depth on behalf of Wimpey. Cable tool percussion boring used to penetrate the drift; rock penetrated using rotary coring. Hole sunk in 1962.

g.l. to 13.41m	-	Drift. <No description provided>
13.41 to 64.77m	-	Bedrock – comprised of horizons of MUDSTONE, SANDSTONE and SILTSTONE. Occasional ironstone bands and some fossiliferous zones recorded. No coal seams observed.

No groundwater observations recorded on the log.

4.2.4 No BGS recorded mineral sites have been identified within at least 500m of the site.

4.2.5 According to the BGS, the property is at no or very low risk of being affected by the following potential ground stability hazards: collapsible or compressible ground, landslip, ground dissolution, running sand or shrinking/swelling clay.

4.3 Hydrogeology

4.3.1 In terms of groundwater quality vulnerability, the strata (drift and rock) beneath the site have been designated as a high vulnerability Secondary Aquifers.

- 4.3.2 The Pennine Lower Coal Measures strata has been designated as a Secondary A Aquifer.
- 4.3.3 The Glacial deposits have also been designated as a Secondary A Aquifer.
- 4.3.4 The site does not lie within, or within at least 1km of, an Environment Agency (EA) defined groundwater source protection zone.
- 4.3.5 No EA licenced groundwater abstraction boreholes have been identified within 565m of the site.

4.4 Hydrology and Flooding

- 4.4.1 The nearest watercourse to the site is the River Roch – 210m SW. The closest approach of the River Spodden to the site is at the point where it joins the River Roch, some 430m SW.
- 4.4.2 The River Roch was given an EA General Quality Assessment (GQA) grade of C (fairly good) in the year 2000. The River Spodden was given an EA GQA grade of B (good) in 2000.
- 4.4.3 The EA gave the River Spodden a river quality chemistry GQA grade of A (very good) in 2009.
- 4.4.4 No EA licenced surface water abstraction points have been identified within 622m of the site.
- 4.4.5 The site is not indicated to be at risk from sea or river related flooding. The site is at very low risk of being affected by surface water flooding (source: www.check-long-term-flood-risk.service.gov.uk).
- 4.4.6 According to the BGS, the site is located within an area where there is limited potential for groundwater flooding to occur. This is the lowest groundwater flooding risk rating given by the BGS.

4.5 Radon

- 4.5.1 The property is located within a lower probability radon area (where <1% of homes are estimated to be at or above the Action Level).
- 4.5.2 In accordance with BRE publication BR211, no radon gas protection measures need to be installed into proposed developments falling within lower probability radon areas.

4.6 Landfills and Waste Related Industry

- 4.6.1 No landfills or waste related industry have been identified within at least 344m of the site.
- 4.6.2 Areas of upfilling/infilling were identified on historical mapping within 250m of the site. These are listed below:
- A gravel pit 40m N. The gravel pit is not shown on mapping ≥1892.
 - Former mill reservoirs (closest 130m NE). Likely to have been infilled by 1968.
 - Upfilling activity – 110m E & 150m SW. Likely to have been completed by 1968.
 - A large amount of ground reprofiling was carried out around the site between 1960-1968 associated with creating a new road layout. The closest earthworks to the site appear to have taken place ≈35m SE.

4.7 Other Relevant Environmental Information

4.7.1 14no. contemporary trade directory entries are listed within 250m of the site; these are:

- 3no. used car dealers: 11m SW – no longer trading, 26m SW – still trading, 89m W – no longer trading.
- A printers (Avanti Creative) - 84m W & no longer trading.
- A paint manufacturers (94m W) – still trading.
- Lubrication services (97m SE) – no longer trading.
- A car manufacturers (147m W) – no longer trading.
- An exhaust & shock absorber centre (159m W) – still trading.
- A vacuum cleaners sales and service centre (148m SE) – no longer trading.
- A bags, belts & accessories manufacturer & supplier (148m SE) – no longer trading.
- A cheese makers & suppliers (148m SE) – no longer trading.
- A distribution services business (189m NE) – no longer trading.
- 2no. garages: 231m & 232m NE – no longer trading.

4.7.2 The site does not lie within a nitrate vulnerable zone.

4.7.3 No fuel stations have been identified within 455m of the site.

4.7.4 4no. EA recorded pollution incidents to controlled waters are listed within 250m of the site (closest is 146m SW). These all occurred in 1995 or 1996 and the pollutant typically involved oil. The incidents are all listed as being Category 3 (i.e. minor) incidents.

4.7.5 None of the following were identified within influencing distance of the site:

- Wastewater discharge consents.
- Prosecutions relating to controlled waters.
- Integrated pollution prevention and control authorisations.
- Local authority pollution prevention and control authorisations.
- Local authority pollution prevention and control enforcements.
- Prosecutions relating to authorised processes.
- Substantiated pollution incident register entries.
- Contaminated land register entries and notices.
- Enforcement notices and prohibition notices.
- Integrated pollution controls.
- Pollution prevention and control authorisations.
- Registered radioactive substances.
- Water industry act referrals.
- Integrated pollution control registered waste sites.
- Control of major accident hazard sites.
- Explosive sites.
- Notification of installations handling hazardous substances sites.
- Planning hazardous substance consent sites.
- Planning hazardous substance enforcement sites.
- Sensitive land usage sites (e.g. green belt, nature reserves, SSSIs etc).

4.8 Unexploded Bomb Risk

- 4.8.1 According to Zetica, the site and surrounding area are at low risk of being affected by unexploded bombs which were dropped during WWII (see Appendix E). This information was obtained using the following link: <https://zeticauxo.com/download3ads-and-resources/risk-maps/>.
- 4.8.2 Zetica grades WWII bomb risk as being either low, medium or high.

5.0 PRELIMINARY RISK ASSESSMENT

5.1 Introduction

- 5.1.1 In statutory guidance regarding potentially contaminated land, risk assessments are used as a site-specific generic technique to identify potential environmental issues.

5.2 Risk Assessment Methodology

- 5.2.1 The purpose of a Phase 1 Environmental Assessment (desk study) is to obtain information regarding the site or property to gain a preliminary understanding of potential environmental issues. This information includes existing or proposed use, site history and environmental setting. The information obtained is used to develop a conceptual model, which describes potential hazards (sources), pathways and receptors, which may be relevant to a property or site. The following definitions have been adapted from Part IIA of the Contaminated Land Regulations 2000:

Source: A substance or condition that has the potential to cause harm.

Pathway: One or more routes by which a receptor is being or could be exposed to or brought into contact with a source of contamination.

Receptor: A living organism or group of living organisms, an ecological system or property that could be detrimentally affected by the source.

Figure 5.1 depicts a conceptual model, which shows the stages of a risk assessment via source – pathway – receptor methodology to produce a pollutant linkage.

Figure 5.1: Risk assessment conceptual model.

- 5.2.2 A risk may be considered significant if all three of the above stages are present and thereby forming a pollutant linkage. Geotechnical and mining risks can also be considered using the source, target, pathway model.

5.3 Conceptual Site Model (CSM)

- 5.3.1 The table below summarises the potential pollutant linkages/geotechnical/mining risks that have been identified (risks have assumed that no remedial works have taken place); Appendix F presents guidance as to how the CSM preliminary risk ratings have been derived):

Outline Conceptual Site Model		
Source of Contamination/Other	Pathway	Receptor & Preliminary Risk Rating + Notes
<u>Site Borne Contamination</u> The property has been developed since at least 1892 to the present day. Although the usage is largely unknown during this time, it may have been affiliated with an adjacent sign making works after ≈1960/1966. The site has most recently been used as a printers and sign makers. Ash and cinder (from coal burning) was historically commonly used as a sub-base to hardstanding. Ash and cinder can contain elevated concentrations of some determinands (e.g. arsenic, lead and benzo(a)pyrene) when compared to guideline levels for the protection of human health in the residential setting. If Made Ground is present beneath the site, it may contain some of the determinands indicated in table footnote (1).	Ingestion of soil Inhalation of dust Inhalation of vapours Dermal contact	<u>End users</u> – at low to medium risk The site will be completely covered with buildings or hardstanding. These will remove the pathways for end users to come into direct contact with potentially contaminated soil beneath the site. A low to medium risk has been given as organic vapours could enter the building and build up in confined areas. <u>Construction/future maintenance workers</u> – at medium risk These potential receptors could also come into direct contact with any contaminated soil underlying the site. <u>Nearby residents, workers, worshippers</u> – at low risk Risk is principally from organic vapours migrating beyond the site boundary.
	Leaching from contaminated soils into groundwater with vertical and lateral migration. Impacted perched groundwater. Lateral and vertical migration.	<u>Surface Waters</u> (nearest ≈210m away – River Roch) – At very low risk. A very low risk given due to the distance of the watercourse from the site and the fact that it is unlikely that significant amounts of potentially mobile contamination are present beneath the property. <u>Aquifers – (Drift – Secondary A Aquifer)</u> – At low to medium risk. The aquifer is expected to lie immediately beneath the Made Ground and is therefore unprotected. Any mobile contamination at the surface therefore has the potential to impact on the water quality of the drift aquifer. However, due to the small size of the site, it is considered unlikely that significant amounts of potentially mobile contamination will be present beneath the site. <u>Aquifers – (Bedrock – Secondary A Aquifer)</u> – At very low risk. Nearby BGS borehole logs suggest that the granular drift strata beneath the site will be underlain by horizons of Glacial Till and laminated CLAY. These low permeability horizons will serve to protect the underlying bedrock aquifer from any downward percolating mobile contamination. It is noted that no groundwater source protection zones or groundwater abstractions have been identified within influencing distance of the site.
	Plant Uptake	<u>Plants & Native Grasses</u> – at no risk. No garden areas/areas of planting are scheduled.
<u>Asbestos Containing Materials (ACMs)</u> The nature of any Made Ground material beneath the site is not known. Any Made Ground present could contain ACMs.	Inhalation of fibres	<u>End users</u> – at negligible risk. <u>Construction/future maintenance workers</u> – at low to medium risk. <u>Nearby residents</u> – at negligible risk.
<u>Site Borne Contamination/Leachate Contaminated Perched Groundwater/Aggressive natural ground conditions (high sulphate and/or low pH)</u>	Reaction	<u>Below ground services</u> (including buried concrete and water supply pipes) – at medium risk.
<u>Offsite Contamination</u> The topography in the general area slopes down gently/moderately to the SE. The nearest potentially contaminative land usages (historical and contemporary within 250m) which could credibly affect the site include the following: • A sign making works – 0m W. • A laundrette – 10m N. • Garages - 15m SW & 160m N. • A potentially infilled gravel pit – 40m N. • Timber yards – 40m NE, 95m NE & 185m N. • A cotton mill – 120m NE. • A cotton waste mill – 105m NW. • Warehouse – 125m NW • A joinery factory – 115m NE. • Saw mills – 150m NE & 205m N. • A smithy – 150m N. • A printing works – 120m NE. • Engineering works – several >110m N & >125m NE. • A silk mill – 190m NE. • Mill reservoir infilling – 135m NE.	Leaching from contaminated soils into groundwater with and lateral migration. Inhalation of vapours Dermal contact	<u>End users</u> – at low to medium risk. <u>Construction/future maintenance workers</u> – at low to medium risk.
	Leaching from contaminated soils into groundwater with and lateral migration. Reaction	<u>Below ground services</u> – at low to medium risk
<u>Hazardous Gases</u> – see table footnote (2) No landfills or waste related industry have been identified within at least 344m of the site. The historical map study identified a number of areas where infilling/upfilling activities are likely to have taken place: • A gravel pit 40m N. Not shown on mapping ≥1892. Possibly infilled. • Former mill reservoirs (closest 130m NE). All likely to have been infilled by 1968. • Upfilling activity – 110m E & 150m SW. Likely to have been completed by 1968. • The road network in the near vicinity of the site was altered between 1960-1968 which involved a large amount of ground reprofiling. Closest earthworks to the site are likely to have taken place ≈35m SE. There is potential for organic contamination to be present beneath/adjacent to the site.	Migration into buildings followed by build-up in poorly ventilated confined areas and inhalation/explosion.	<u>End users</u> – at low risk. <u>Construction/future maintenance workers</u> – at low risk. <u>Nearby residents</u> – at very risk (from site derived gases). <u>Buildings/services</u> – at very low risk. The potentially infilled gravel pit is expected to have a very low generation potential. This is due to the age of infilling. Unlikely to present a risk to the site. The potentially infilled mill reservoirs and areas of upfilling are likely to have low gas generation potential. This is due to their relatively small size and age that they would have been infilled/upfilled. They are unlikely to present a significant gas risk due to their likely low gas generation potential and distance from the site. The materials used to construct the new road layout in the near vicinity of the site are likely to have been inert. The gas generation potential of this material is therefore likely to be very low. The risk to end users from the materials used to construct the new road layout is considered to be very low. Elevated concentrations of landfill type gases could be generated through the biodegradation of any organic contamination present beneath/adjacent to the site. The generation potential of this source is considered to be low.

Outline Conceptual Site Model		
Source of Contamination/Other	Pathway	Receptor & Preliminary Risk Rating + Notes
Shallow coal seams are not expected to be present beneath the site. Large quantities of organic rich soil (e.g. peat) are not anticipated to be present in the near vicinity of the site.		Although the gas generation potential of coal is very low, large volumes of mining gas can build up in workings/shafts which can then be emitted very quickly to the surface (e.g. through collapsed overlying strata/fault zones following a rapid fall in atmospheric pressure). However, no shallow coal seams/workings are anticipated to be present beneath the site and the bedrock strata is not known to be faulted. The risk from coal derived gases is considered to be negligible. The gas generation potential of natural organic rich soil (e.g. peat) is very low to low. Significant deposits of natural organic rich soil are not anticipated to be present in the near vicinity of the site. The landfill gas risk from organic rich natural soil is considered to be negligible. Note – Gas generation potential has been assessed in line with CIRIA C665 and BS8576:2013 - see table footnote (3) & (4).
<u>Radon gas</u> <1% of homes in the area are expected to be at or above the Action Level.	Migration into buildings followed by build-up in poorly ventilated confined areas and inhalation.	<u>End users</u> – at very low risk.
<u>Shallow Coal Mining</u> The site is not located within a Coal Authority defined development high risk area and is not shown to be a risk from probable unrecorded shallow coal workings. It is highly unlikely that shallow worked coal seams will be present beneath the site.	Collapse with excessive total and differential settlements.	<u>Structures/Services</u> – at negligible risk.
<u>Mine Entries</u> No known mine entries are listed within at least 100m of the site.	Collapse with excessive total and differential settlements.	<u>End users</u> – at very low risk. <u>Construction/future maintenance workers</u> – at very low risk. <u>Nearby residents</u> – at very low risk. <u>Buildings/services</u> – at very low risk.
<u>Flooding</u>	River related Sea related	<u>Property</u> – At very low risk.
	Surface water related	<u>Property</u> – At very low risk.
	Groundwater	<u>Property</u> (below ground) – at low risk. The BGS indicates that the site is located within an area where there is limited potential for groundwater flooding to occur.
<u>Geotechnical properties of the ground.</u>	Failure of foundations/floorslabs. Excessive total and differential settlement.	<u>Structures/Services</u> – at moderate risk. Foundations used to support any new development on the site should be designed to support the scheduled loadings after the geotechnical properties of the soils beneath the site have been determined by a suitable ground investigation. If foundations are designed without taking the ground conditions into account, the development would be at risk from unacceptable amounts of total and differential settlement occurring and/or foundation failure.
<u>Invasive Plants</u> No invasive plant species were observed growing over the site during the site walkover survey.	Movement of affected soil across the site/off site during site preparation works.	<u>Structure/Services</u> – at negligible risk. <u>Ecology</u> – at negligible risk.
<u>Unexploded Bomb Risk</u>	Encountering unexploded WWII bombs during the site investigation or building works followed by explosion.	<u>Structures/Services/Human Health</u> – at low risk. According to Zetica the site is at low risk of being affected by unexploded WWII ordnance; unexploded bomb risk is graded by Zetica from low to high.
(1) The most likely contaminants that could be present beneath the site include metals and metalloids, inorganic compounds, polynuclear aromatic hydrocarbons (PAHs), sulphate, petroleum hydrocarbons and asbestos fibres. Any perched groundwater present could also contain a similar suite of contaminants (except asbestos). (2) Methane, carbon dioxide, carbon monoxide and hydrogen sulphide. (3) British Standards Institute guidance document BS8576:2013 entitled 'Guidance on investigations for ground gas – Permanent gases and Volatile Organic Compounds (VOCs).' (4) CIRIA guidance document C665, dated 2007 and entitled 'Assessing risks posed by hazardous ground gases to buildings'.		

6.0 RECOMMENDATIONS

6.1 Following completion of the preliminary risk assessment, the following site investigation related phase 2 works are recommended:

- The sinking of several boreholes (with in-situ testing) is advised to help determine the thickness, strength and nature of soil deposits beneath the property and to allow for the installation of monitoring wells. Due to lack of access, this work will need to take place after the existing development has been removed.
- Groundwater level monitoring and sampling should take place on 1no. occasion.
- The need for gas monitoring should be assessed after the thickness, nature and TOC content of the Made Ground has been determined.
- Soil and groundwater samples taken during the site investigation will need to be sent to a chemical testing laboratory for analysis to help to confirm the contamination risk.
- Chemical testing of the Made Ground, natural soil and groundwater should also take place for buried concrete design purposes.
- Plasticity testing should be carried out at a geotechnical testing laboratory on samples of Glacial Till (if encountered) to determine its shrinkage potential.

6.2 Once the above site investigation works have been completed, a Phase 2 geo-environmental report would need to be produced; this report should provide:

- Advice as to whether and to what extent remedial works need to be undertaken to reduce risks to human health and the environment; as well as
- Foundation, floorslab and buried concrete design advice.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice
Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

Lancashire And Furness

Published 1893

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Additional SIMs

Published 1959 - 1985

Source map scale - 1:1,250

The SIM cards (Ordnance Survey's `Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Ordnance Survey Plan
Published 1967 - 1989
Source map scale - 1:1,250

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Additional SIMs

Published 1978 - 1990

Source map scale - 1:1,250

The SIM cards (Ordnance Survey's `Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1992

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Lancashire And Furness

Published 1851

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping
Published 1999
Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

Envirocheck®

LANDMARK INFORMATION GROUP®

Lancashire And Furness

Published 1851

Source map scale - 1:1,056

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Lancashire And Furness

Published 1892

Source map scale - 1:500

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to complement the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Ordnance Survey Licence number: 100020315

Section 1 – Mining activity and geology

Past underground mining

No past mining recorded.

Probable unrecorded shallow workings

None.

Spine roadways at shallow depth

No spine roadway recorded at shallow depth.

Mine entries

None recorded within 100 metres of the enquiry boundary.

Abandoned mine plan catalogue numbers

The following abandoned mine plan catalogue numbers intersect with some, or all, of the enquiry boundary:

16820	PO0	115
-------	-----	-----

Please contact us on 0345 762 6848 to determine the exact abandoned mine plans you require based on your needs.

Outcrops

No outcrops recorded.

Geological faults, fissures and breaklines

No faults, fissures or breaklines recorded.

Opencast mines

None recorded within 500 metres of the enquiry boundary.

Coal Authority managed tips

None recorded within 500 metres of the enquiry boundary.

Section 2 – Investigative or remedial activity

Please refer to the 'Summary of findings' map (on separate sheet) for details of any activity within the area of the site boundary.

Site investigations

None recorded within 50 metres of the enquiry boundary.

Remediated sites

None recorded within 50 metres of the enquiry boundary.

Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

Mine gas

None recorded within 500 metres of the enquiry boundary.

Mine water treatment schemes

None recorded within 500 metres of the enquiry boundary.

Section 3 – Licensing and future mining activity

Future underground mining

None recorded.

Coal mining licensing

None recorded within 200 metres of the enquiry boundary.

Court orders

None recorded.

Section 46 notices

No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

Withdrawal of support notices

The property is not in an area where a notice to withdraw support has been given.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

Payments to owners of former copyhold land

The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Section 4 – Further information

Based on the responses in this report, no further information has been highlighted.

Future development

If development proposals are being considered, technical advice relating to both the investigation of coal and former coal mines and their treatment should be obtained before beginning work on site. All proposals should apply specialist engineering practice required for former mining areas. No development should be undertaken that intersects, disturbs or interferes with any coal or coal mines without first obtaining the permission of the Coal Authority.

MINE GAS: Please note, if there are no recorded instances of mine gas within 500m of the enquiry boundary, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded. Developers should be aware that the investigation of coal seams, mine workings or mine entries may have the potential to generate and/or displace underground gases. Associated risks both to the development site and any neighbouring land or properties should be fully considered when undertaking any ground works. The need for effective measures to prevent gases migrating onto any land or into any properties, either during investigation or remediation work, or after development must also be assessed and properly addressed. In these instances, the Coal Authority recommends that a more detailed Gas Risk Assessment is undertaken by a competent assessor.

Section 5 – Data definitions

The datasets used in this report have limitations and assumptions within their results. For more guidance on the data and the results specific to the enquiry boundary, please **call us on 0345 762 6848** or **email us at groundstability@coal.gov.uk**.

Past underground coal mining

Details of all recorded underground mining relative to the enquiry boundary. Only past underground workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination, will be included.

Probable unrecorded shallow workings

Areas where the Coal Authority believes there to be unrecorded coal workings that exist at or close to the surface (less than 30 metres deep).

Spine roadways at shallow depth

Connecting roadways either, working to working, or, surface to working, both in-seam and cross measures that exist at or close to the surface (less than 30 metres deep), either within or within 10 metres of the enquiry boundary.

Mine entries

Details of any shaft or adit either within, or within 100 metres of the enquiry boundary including approximate location, brief treatment details where known, the mineral worked from the mine entry and conveyance details where the mine entry has previously been sold by the Authority or its predecessors British Coal or the National Coal Board.

Abandoned mine plan catalogue numbers

Plan numbers extracted from the abandoned mines catalogue containing details of coal and other mineral abandonment plans deposited via the Mines Inspectorate in accordance with the Coal Mines Regulation Act and Metalliferous Mines Regulation Act 1872. A maximum of 9 plan extents that intersect with the enquiry boundary will be included. This does not infer that the workings and/or mine entries shown on the abandonment plan will be relevant to the site/property boundary.

Outcrops

Details of seam outcrops will be included where the enquiry boundary intersects with a conjectured or actual seam outcrop location (derived by either the British Geological Survey or the Coal Authority) or intersects with a defined 50 metres buffer on the coal (dip) side of the outcrop. An indication of whether the Coal Authority believes the seam to be of sufficient thickness and/or quality to have been worked will also be included.

Geological faults, fissures and breaklines

Geological disturbances or fractures in the bedrock. Surface fault lines (British Geological Survey derived data) and fissures and breaklines (Coal Authority derived data) intersecting with the enquiry boundary will be included. In some circumstances faults, fissures or breaklines have been known to contribute to surface subsidence damage as a consequence of underground coal mining.

Opencast mines

Opencast coal sites from which coal has been removed in the past by opencast (surface) methods and where the enquiry boundary is within 500 metres of either the licence area, site boundary, excavation area (high wall) or coaling area.

Coal Authority managed tips

Locations of disused colliery tip sites owned and managed by the Coal Authority, located within 500 metres of the enquiry boundary.

Site investigations

Details of site investigations within 50 metres of the enquiry boundary where the Coal Authority has received information relating to coal mining risk investigation and/or remediation by third parties.

Remediated sites

Sites where the Coal Authority has undertaken remedial works either within or within 50 metres of the enquiry boundary following report of a hazard relating to coal mining under the Coal Authority's Emergency Surface Hazard Call Out procedures.

Coal mining subsidence

Details of alleged coal mining subsidence claims made since 31 October 1994 either within or within 50 metres of the enquiry boundary. Where the claim relates to the enquiry boundary confirmation of whether the claim was accepted, rejected or whether liability is still being determined will be given. Where the claim has been discharged, whether this was by repair, payment of compensation or a combination of both, the value of the claim, where known, will also be given.

Details of any current 'Stop Notice' deferring remedial works or repairs affecting the property/site, and if so the date of the notice.

Details of any request made to execute preventative works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991. If yes, whether any person withheld consent or failed to comply with any request to execute preventative works.

Mine gas

Reports of alleged mine gas emissions received by the Coal Authority, either within or within 500 metres of the enquiry boundary that subsequently required investigation and action by the Coal Authority to mitigate the effects of the mine gas emission. Please note, if there are no recorded instances of mine gas reported, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded.

Mine water treatment schemes

Locations where the Coal Authority has constructed or operates assets that remove pollutants from mine water prior to the treated mine water being discharged into the receiving water body.

These schemes are part of the UK's strategy to meet the requirements of the Water Framework Directive. Schemes fall into 2 basic categories: Remedial – mitigating the impact of existing pollution or Preventative – preventing a future pollution incident.

Mine water treatment schemes generally consist of one or more primary settlement lagoons and one or more reed beds for secondary treatment. A small number are more specialised process treatment plants.

Future underground mining

Details of all planned underground mining relative to the enquiry boundary. Only those future workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination will be included.

Coal mining licensing

Details of all licenses issued by the Coal Authority either within or within 200 metres of the enquiry boundary in relation to the under taking of surface coal mining, underground coal mining or underground coal gasification.

Court orders

Orders in respect of the working of coal under the Mines (Working Facilities and Support) Acts of 1923 and 1966 or any statutory modification or amendment thereof.

Section 46 notices

Notice of proposals relating to underground coal mining operations that have been given under section 46 of the Coal Mining Subsidence Act 1991.

Withdrawal of support notices

Published notices of entitlement to withdraw support and the date of the notice. Details of any revocation notice withdrawing the entitlement to withdraw support given under Section 41 of the Coal Industry Act 1994.

Payment to owners of former copyhold land

Relevant notices which may affect the property and any subsequent notice of retained interests in coal and coal mines, acceptance or rejection notices and whether any compensation has been paid to a claimant.

The map highlights any specific surface or subsurface features within or near to the boundary of the site.

APPENDIX E
ZETICA BOMB RISK MAP

UNEXPLODED BOMB RISK MAP

SITE LOCATION

Location: OL12 6TP,
Map Centre: 389336,413570

LEGEND

-  **High:** Areas indicated as having a bombing density of 50 bombs per 1000acre or higher.
-  **Moderate:** Areas indicated as having a bombing density of 15 to 49 bombs per 1000acre.
-  **Low:** Areas indicated as having 15 bombs per 1000acre or less.

- | | | |
|--|--|--|

|  transport |  dock |  Luftwaffe targets |
|  utilities |  Bombing decoy |  other |

How to use your Unexploded Bomb (UXB) risk map?

The map indicates the potential for Unexploded Bombs (UXB) to be present as a result of World War Two (WWII) bombing.

You can incorporate the map into your preliminary risk assessment* for potential Unexploded Ordnance (UXO) for a site. Using this map, you can make an informed decision as to whether more in-depth detailed risk assessment* is necessary.

What do I do if my site is in a moderate or high risk area?

Generally, we recommend that a detailed UXO desk study and risk assessment is undertaken for sites in a moderate or high UXB risk area.

Similarly, if your site is near to a designated Luftwaffe target or bombing decoy then additional detailed research is recommended.

More often than not, this further detailed research will conclude that the potential for a significant UXO hazard to be present on your site is actually low.

Never plan site work or undertake a risk assessment using these maps alone. More detail is required, particularly where there may be a source of UXO from other military operations which are not reflected on these maps.

If my site is in a low risk area, do I need to do anything?

If both the map and other research confirms that there is a low potential for UXO to be present on your site then, subject to your own comfort and risk tolerance, works can proceed with no special precautions.

A low risk really means that there is no greater probability of encountering UXO than anywhere else in the UK.

If you are unsure whether other sources of UXO may be present, you can ask for one of our **pre-desk study assessments (PDSA)**

If I have any questions, who do I contact?

tel: **+44 (0) 1993 886682**

email: **uxo@zetica.com**

web: **www.zeticauxo.com**

The information in this UXB risk map is derived from a number of sources and should be used in conjunction with the accompanying notes on our website: (<https://zeticauxo.com/downloads-and-resources/risk-maps/>)

Zetica cannot guarantee the accuracy or completeness of the information or data used and cannot accept any liability for any use of the maps. These maps can be used as part of a technical report or similar publication, subject to acknowledgment. The copyright remains with Zetica Ltd.

It is important to note that this map is not a UXO risk assessment and should not be reported as such when reproduced.

*Preliminary and detailed UXO risk assessments are advocated as good practice by industry guidance such as CIRIA C681 'Unexploded Ordnance (UXO), a guide for the construction industry'.

APPENDIX F
PRELIMINARY RISK RATINGS

GUIDANCE ON PRELIMINARY RISK RATINGS

CIRIA document C552 dated 2001 and entitled 'Contaminated Land Risk Assessment', 'A Guide to Good Practice', provides advice on the development of the Conceptual Site Model (CSM) and preliminary risk ratings. Risk ratings are derived by assessing the likelihood of the risk occurring in conjunction with the magnitude of the potential consequence of the risk should it occur.

The table below has been taken from C552 and has been used to develop the CSM presented in section 5.0.

Preliminary Risk Rating	Action Required
Very High	Extensive ground investigation required. There is a high probability that sever harm could arise to a designated receptor from an identified hazard, or there is evidence that sever harm to a designated receptor is currently happening. The risk, if realised, is likely to result in a substantial liability. Urgent investigation (if not undertaken already) and remediation are likely to be required.
High	Extensive ground investigation required. Harm is likely to arise to a designated receptor from an identified hazard. Realisation of the risk is likely to present a substantial liability. Urgent investigation (if not undertaken already) is required and remedial works may be necessary in the short term and are likely over the long term.
Moderate	Ground investigation required. It is possible that harm could arise to a designated receptor from an identified hazard. However, it is either relatively unlikely that any such harm would be severe, or if any harm were to occur, it is more likely that the harm would be relatively mild. Investigation (if not already undertaken) is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the long term.
Low	Nominal ground investigation required. It is possible that harm could arise to a designated receptor from an identified hazard, but it is likely that this harm, if realised, would at worst normally be mild.
Very Low	No ground investigation required.* There is a low probability that harm could arise to a receptor. In the event of such harm being realised it is not likely to be severe.
Negligible	No ground investigation required.* There ia a very low possibility that harm could arise to a receptor. In the event of such harm being realised it is not likely to be severe.

* - No further action required unless unforeseen contaminated ground conditions are encountered.
