Treated K80 Shiplap (ACQ) 25 x 125

Our Treated Shiplap manufactured in whitewood is ideal for many external applications such as sheds, garages, cabins and walls due to its kiln dried process which gives the wood extra durability. It has been machined to form a rebate when fitted together, offering an aesthetically pleasing look to the whole structure. The timber is also pressure treated to ACQ Class 4 which protects the timber against fungal decay and insect attack making it perfect for any outdoor joinery projects.

Key Features

- Excellent quality softwood
- External or internal use
- Minimal warp, twist or shatter
- ACQ treated

Product specification

Width: 125mm	Thickness: 25mm	Finished size: 19 x 119
Material: Whitewood	Finish: Planed	Treatment: ACQ Class 4

TechnoNICOL Standard Series Square Roof Shingles 3m²

If you're looking to replace your existing roof, look no further than Standard Series Square Shingles from Wonderbuild – the leading innovators in roofing technologies. These exceptional roofing materials provide a superb balance between aesthetics, functionality and durability. This makes them the perfect choice for those who wish to feel confident that they are getting the best quality and reliability at a price that is highly affordable.

An issue with traditional asphalt shingles is that they tended to be quite heavy which would place a strain on the structure of the roof. Also, these shingles lacked much in the way of durability and would need to be replaced regularly. These Bituminous roof shingles feature a reinforced, heavyweight glass fibre base, coated with oxidised bitumen. Additionally, there is an upper surface coated with coloured mineral granules consisting of a coarse-grained basalt sprinkling.

As a result, the TechnoNICOL Standard Series Square Shingles boast increased performance and lifespan. They are also far lighter than traditional shingles and are far more attractive, lending themselves well to a whole range of traditional, modern and contemporary properties. The Standard Series Square Shingles will also stand up well to rain, wind, snow and direct sunlight as they feature outstanding weather and UV resistance and are 100% watertight.

These roofing materials also feature a far higher level of fire resistance and are far more cost-effective when compared with other types of roof. The installation process couldn't be simpler and will ultimately depend on the pitch of your roof. For roofs with a pitch of between 15° and 45° shingles are applied directly onto shingle underlay. For steeper roofs, the application is directly onto the roofing structure itself.

Whether you're looking to replace your existing roof or to add a new one entirely, the Standard Series Square Shingles are a fantastic choice. The TechnoNICOL Standard Series Square Shingles feature package dimensions of 100mm x 371mm, a package weight of 28.2kg and a shingle thickness of 0.2mm. This series is available in five different colours – Forest Green, Charcoal Black, Grey, Red and Brown.

So, if you're looking to sling that old leaking roof and replace it with something that is a lot more reliable, choose the Standard Series Square Shingles from TechnoNICOL today.
