1. INTRODUCTION

Instruction

1.1 BWB Consulting Ltd (BWB) has been appointed by Wilson Bowden Developments (The Applicant) to provide highways and transportation advice in support of a full planning application for 'The erection of two employment buildings (Classes E(g)(iii), B2 and B8) with ancillary office space, new access, car parking, servicing, boundary treatments, hard and soft landscaping and other associated works' located at Kingsway Business Park in Rochdale, Greater Manchester. It should be noted that outline planning permission exists for development on Plot J2 (application reference 14/00542/OUT) and the approved parameters allow for development across the site in accordance with the approved parameters plan shown at drawing number 2013-233/102 Revision A, a copy of which is included at Appendix 1. The only reason that a full planning application is being submitted is because the height of buildings J2-1 and J2-2 have been increased compared to the approved parameters. Appendix 2 includes a copy of the proposed site masterplan, which shows that Plot J2 seeks permission for the following:

- Unit J2-1 – B2/B8 unit of 10,824sqm GFA.
- Unit J2-2 – B2/B8 unit of 8,083sqm GFA.

1.2 This revision of the Travel Plan (Revision P4) includes minor updates to that originally submitted in October 2022 as a result of physical changes to the scheme following various objections and discussions held at Planning Committee on 16 February 2023.

1.3 **Figure 1** shows the location of Plot J2 within the wider Kingsway Business Park.

Figure 1. Indicative Site Location Plan

Definition of a Travel Plan

- 1.4 The Department for Transport's (DfT) 'Good Practice Guidelines: Delivering Travel Plans through the Planning Process' (April 2009) states that a Travel Plan is:

"a long-term management strategy for an occupier or site that seeks to deliver sustainable transport objectives through positive action and is articulated in a document that is regularly reviewed".

- 1.5 At present, there are no end users lined up to occupy any of the two units within Plot J2. Therefore, this document is a Framework Travel Plan which will be taken and built upon by the end occupiers. This document has also been prepared in accordance with BREEAM standards and hence the occupiers (once known) will be involved in the development of the Travel Plan as it moves forward. This Framework Travel Plan and any subsequent Detailed Travel Plans for each unit will be consistent with the already approved site wide Sustainable Travel Plan (November 2010), prepared to discharge Condition 40 of the outline application.
- 1.6 A Transport Statement has also been prepared to support the planning application which can be found under separate cover and should be read in conjunction with this Framework Travel Plan.

Report Structure

- 1.7 This Framework Travel Plan is structured as follows:
- **Section 2: Site Assessment** – provides details of the existing conditions at the site and its accessibility to sustainable modes of travel, including walking, cycling and public transport. It also calculates the BREEAM Accessibility Index;
 - **Section 3: Projected Modal Split** – sets out the initial modal split calculations;
 - **Section 4: Objectives and Targets** – details the objectives of the Travel Plan and the targets in terms of modal shift ambitions;
 - **Section 5: Measures and Incentives** – outlines various measures that could be implemented at the development in order to achieve the targets;
 - **Section 6: Implementation and Monitoring** – details the methodology for obtaining staff travel survey information in order to understand the success of the Travel Plan as well as monitor and review the results against the targets set; and
 - **Section 7: Action Plan** – outlines the tasks (and timescales) that should be implemented to achieve the targets of the Travel Plan.

2. SITE ASSESSMENT

Site Location

- 2.1 Plot J2 comprises an irregular shaped parcel of land with an area of 4.377 hectares and is bound by disused fields to the north which will accommodate future development at Kingsway Business Park, to the east by John Milne Avenue, to the south by James Kearns Avenue and the west by an existing residential area. Junction 21 of the M62 (M62 J21) is located approximately 1.1 kilometres to the east of the site and can be accessed via the A6193.

Local Highway Network

- 2.2 Access to the proposed development will be taken from the northern side of James Kearns Avenue which currently provides access to the large distribution unit to the south of the proposed development site (located at Plot J1 on the parameters plan at **Appendix 1**). James Kearns Avenue measures 7.3 metres wide and provides street lighting along both sides of the carriageway. There is a 2 metres wide footway on the northern edge of the carriageway and a 3 metres wide shared footway/cycleway on the southern edge of the carriageway. At the James Kearns Avenue junction to the east, a dropped kerb pedestrian crossing is provided, which includes a central pedestrian refuge and tactile paving. There are currently double yellow lines on both sides of the carriageway throughout, which ensures HGVs and employees of Kingsway Business Park do not park on either side of the carriageway.
- 2.3 James Kearns Avenue then routes north to the A6193 and south to Dig Gate Lane at a priority-controlled roundabout. It measures 7.3 metres wide and features double yellow lines on both sides of the carriageway. It is well lit and subject to a 30mph speed limit. There is a shared footway/cycleway on the eastern side of the carriageway which measures 4 metres wide. On the western side of the carriageway there is a footway which measures 2 metres wide. There are a number of dropped kerb pedestrian crossings with tactile paving along its length and the cycle facilities connect with those that extend towards the site. At a distance of 90 metres to the north of the James Kearns Avenue junction, access is provided onto an off-road pedestrian bridleway which is lightly trafficked at its western end.

Development Details

- 2.4 A copy of the proposed site masterplan is included at **Appendix 2**. The proposed development seeks full planning permission for three industrial units located on Plot J2 of the wider Kingsway Business Park development. The two units would operate with flexible B2/B8 use and would have the following gross floor areas.
- Unit J2-1 – 10,824sqm GFA.
 - Unit J2-2 – 8,083sqm GFA.
- 2.5 Both units within Plot J2 would be served via new access points from James Kearns Avenue which currently provides vehicular access to the large distribution unit to the south of the site. Both of the units would provide one access point for HGVs to the servicing yard and one point of access to the staff car park. In total three points of

access are to be taken from the northern edge of James Kearns Avenue and one point of access is provided through the continuation of James Kearns Avenue to the west.

- 2.6 The HGV access for unit J2-1 extends perpendicular to main carriageway, the access measures 8.4 metres wide with a 10 metres kerb radius on the western side of the access and a 16 metres kerb radius on the eastern side of the access. The HGV access for Unit 2-2 also has a carriageway width of 8.4 metres with a 10 metres kerb radius on the western side of the junction and a 16 metres kerb radius the eastern side of the junction.
- 2.7 The car park access for unit J2-1 measures 6 metres wide with 6 metres kerb radii provided on both sides of the carriageway. The car park access for unit J2.2 is located at the western end of James Kearns Avenue and is provided by extending the existing carriageway to the west providing a 9.5 metres wide carriageway as it enters the site boundary which then reduces in width to 6 metres.
- 2.8 Pedestrian access to unit J2-1 is provided via the staff car park, where a pedestrian footway is provided along the outside edge of the unit. This footway would provide access for staff parked within the car park. However, there is another pedestrian footway provided which links the entrance of the unit with the existing facilities on James Kearns Avenue. This route comprises a 1.8 metres wide ramped walkway from James Kearns Avenue located adjacent to the staff car park access. Cyclists can also access the secure cycle parking area via the same ramped path (although would need to dismount). Similarly, there are two pedestrian access points within unit J2-2, one provided from the car park and the other which extends to the unit from James Kearns Avenue. The footway from James Kearns Avenue measures 1.8 metres wide. The proposed site masterplan at **Appendix 2** shows the proposed pedestrian access for both units.
- 2.9 Cyclists would access the site using the existing shared footway/cycleway which routes along the southern edge of James Kearns Avenue and joins the segregated footway/cycleway on John Milne Avenue to the east.
- 2.10 To meet the requirements of the Disability Discrimination Act and provide convenient and safe access for disabled and visually impaired users, all crossings within the development would be provided with dropped kerbs and tactile paving. Off-road infrastructure would extend into the site directly to the building entrances and all entrances would be provided with accessibility ramps for wheelchair users.

Sustainable Travel

Introduction

- 2.11 Planning guidance highlights the emphasis being placed on the integration of land uses and sustainable development. The site already has outline planning permission and therefore the principle of sustainability has already been established. However, the following section will set out the future opportunities for staff and visitors to walk, cycle and use public transport to travel to the site. However, employment developments such as Kingsway Business Park are typically located close to the Strategic Road Network (such as the M62 in this instance) where opportunities to access facilities on foot can be more limited.

Amenities

- 2.12 The site is a BREEAM 2018 scheme and as such details of the number and type of existing accessible amenities within 500 metres are required. Table 7.1 of the BREEAM UK New Construction Technical Manual (BRE Global Ltd, 2018) sets out a list of amenities that should be considered. These are shown in **Table 1**.

Table 1. Amenities in Proximity to the Site (copy of Table 7.1 BREEAM 2018)

Amenities
Appropriate food outlet
Access to cash
Access to an outdoor open space (public or private, suitably sized and accessible to building users)
Access to a recreation or leisure facility for fitness or sports
Public available postal facility
Community facility
Over the counter services associated with a pharmacy
Public sector GP surgery or general medical centre
Childcare facility or school

- 2.13 Of the amenity types listed in **Table 1**, there are none located within 500 metres walk of the development site. However, a number of the facilities listed would be accessible within 1000 metres of the development. These can be seen listed below;

- Best One Convenience Store – Turf Hill (900m)
- Cash Machine (900m)
- Neston Road Play Area (950m)
- Kingsway Park High School (1000m)
- Stanney Brook Park (1000m)

Pedestrian Travel

- 2.14 The Guidelines for Providing for Journeys on Foot (GPJF) document describes acceptable walking distances for pedestrians without mobility impairment. GPJF suggests that the maximum walking distance for town centres is approximately 800m, commuting/schools is approximately 2km and for other facilities is approximately 1.2km.
- 2.15 **Figure 2** identifies a 2 kilometres pedestrian isochrone centred on the site, which demonstrates that areas including parts of Rochdale, Milnrow, Balderstone, Kirkholt and Firgrove are within a convenient walking distance. These areas comprise a vast amount

of residential development, which provides a convenient distance for future staff to commute from, as well as other amenities including schools, retail facilities, restaurants, take-aways, Public Houses, sports facilities and public transport stops (including bus and tram stops). Rochdale Train Station is located outside the desirable 2 kilometres walking distance at approximately 3.0 kilometres walk from the site.

Figure 2. 2km Pedestrian Isochrone

- 2.16 The location of the site in context of the wider Rochdale area means it is likely that the main pedestrian desire line would be to the north and west of the site towards Rochdale Town Centre. Staff would be able to walk to these areas via the existing public footpath that routes along the northern boundary of the site (Lower Lane) and continues to the B6194 New Broad Lane to the west of the site. To access Turf Hill Road to travel northbound towards Rochdale, two traffic free alleyways can be used which are accessed from the north-western side of Lower Lane as it enters the residential area.
- 2.17 New Broad Lane routes north to south and can be used to access areas to the south of Rochdale Town Centre. There are 2 metres wide footways on both sides of the carriageway and a number of bus stops, the carriageway is traffic calmed with speed humps along its length. Access can be provided to surrounding off road cycle and pedestrian routes at its southern end. Turf Hill Road extends in a north to south direction on a curved trajectory between New Broad Lane to the west and Rochdale bypass to the north. There is good pedestrian infrastructure providing access to a number of bus stops. The carriageway is traffic calmed with speed humps due to its proximity to Kingsway Park High School. There are also controlled crossing points provided along Turf Hill Road.

Cycle Travel

- 2.18 Local Transport Note (LTN) 1/04 states that there are limits to the distances generally considered acceptable for cycling. The mean average length for cycling is 4km (2.4 miles), although journeys of up to three times this distance are not uncommon for regular commuters. It is widely considered that cycling has the potential to substitute for short car trips, particularly those under 5km and form part of a longer multi modal journey by public transport. Cycling is therefore an important journey to work mode that has the potential to substitute for short car journeys.
- 2.19 **Figure 3** shows a 5 kilometres cycle isochrone centred on the site, which shows that all of Rochdale Town Centre, Firgrove, Milnrow, Newbold Brow, Small Bridge, Sudden, Castleton, Balderstone and Spotland Bridge are within a convenient cycling distance.

Figure 3. 5km Cycle Isochrone

- 2.20 The site does not currently provide any cycle facilities as it is undeveloped. However, there is a footway cycleway provided along the southern side James Kearns Avenue, which leads to the proposed the site accesses. The proposed site masterplan for Plot J2 shows cycle parking spaces at each of the proposed units which are sheltered and secure, in the form of Sheffield Stands.
- 2.21 In terms of offsite infrastructure, there are a number of pedestrian/cycle routes within the vicinity of the site that are easily accessible using the existing facilities. This includes National Cycle Network (NCN) Route 92 and Route 66. **Figure 4** below shows the existing Public Right of Ways (PROWs) and cycle routes which surround the site and could be used for future employees to access the development from local residential areas. The

figure also shows the shared footway cycleways which are being provided within the development.

Figure 4. Existing PROWs and Cycle Facilities

Bus Services

- 2.22 The Guidelines for Planning for Public Transport in Developments, states that “generally walking distances to bus stops in urban areas should be a maximum of 400m and preferably no more than 300m”. However, the Buses in Urban Developments¹ guidance advises a more rigorous approach to catchment area planning as displayed in **Table 2**.

Table 2. Recommended Maximum Walking Distances to Bus Stops

Situation	Maximum Walking Distance
Core bus corridors with two or more high-frequency services	500m
Single high-frequency routes (every 12 minutes or better)	400m
Less frequent routes	300m
Town/city centres	250m

- 2.23 **Figure 5** shows the locations of the nearest bus stops, which are located on John Milne Avenue 250 metres to the southeast from the centre of the site. The bus stops can be accessed using the existing pedestrian infrastructure along John Milne Avenue detailed above. Currently there are no physical bus stop provisions on James Kearns Avenue (i.e.

¹ Buses in Urban Developments, Chartered Institution of Highways and Transportation, 2018

flag and pole), but this is likely to be provided as the development progresses. The stops are served by one public bus routes (R7 'Rochdale Runners'). The bus is a circular and hence only one direction of travel is attainable from these stops (northbound). There are further stops located on Turf Hill Road which is approximately 700 metres to the northwest of the site, where bus routes R9 and R10 can be accessed.

Figure 5. Local Bus Routes

2.24 **Table 3, Table 4 and Table 5** set out a summary of the weekday and weekend bus service frequencies at the local bus stops on John Milne Avenue and Turf Hill Road, whilst **Appendix 3** includes the current bus timetables.

Table 3. Summary of Weekday Bus Services

Service number and route	First Service		Last Service		Daytime Frequency
	'Northbound' Route	'Southbound' Route	'Northbound' Route	'Southbound' Route	
R6	0547	X	2147	X	60 mins
R7	0547	0609	2146	2226	60 mins
R9	0644	X	1914	X	60 mins
R10	X	0711	X	1911	60 mins

Table 4. Summary of Saturday Bus Services

Service number and route	First Service		Last Service		Daytime Frequency
	'Northbound' Route	'Southbound' Route	'Northbound' Route	'Southbound' Route	
R6	0547	X	2147	X	60 mins
R7	0546	0623	2146	2226	60 mins
R9	0809	X	1914	X	60 mins
R10	X	0811	X	1911	60 mins

Table 5. Summary of Sunday Bus Services

Service number and route	First Service		Last Service		Daytime Frequency
	'Northbound' Route	'Southbound' Route	'Northbound' Route	'Southbound' Route	
R6	0547	X	2147	X	60 mins
R7	0546	0626	2146	2226	60 mins
R9	X	X	X	X	X
R10	X	X	X	X	X

Note: Timetable information obtained (March 2023). First/ last service based on time service arrives/leaves the nearest bus stop to the development site.

- 2.25 **Table 3, Table 4** and **Table 5** demonstrate that Route Numbers R6, R7, R9 and R10 operate at a combined maximum frequency of three services per hour between Monday and Saturday and two services per hour on a Sunday. The R9 and R10 do operate any services on Sundays.

Tram Services

- 2.26 The 'Pink Line' tram service operated by Transport for Greater Manchester can be accessed via the Kingsway Business Park stop located approximately 1.5 kilometres northeast of the site via Michael Faraday Avenue. **Figure 6** includes a copy of the Greater Manchester Tram Network Map, which shows the settlements that are served by the Pink Line. This includes but is not limited to; Rochdale Town Centre, Newbold, Milnrow, Newhey, Shaw and Crompton and Oldham.

Figure 6. Greater Manchester Tram Network Map

2.27 The Pink Line operates at a frequency of one service every 12 minutes in both directions 7-days a week.

2.28 As the site is a BREEAM 2018 scheme, the public transport accessibility index is used to recognise and encourage development in proximity to good public transport network, thereby helping to reduce transport-related pollution and congestion.

BREEAM Accessibility Index

2.29 Below is what is needed to calculate the public transport accessibility index:

- Collate the following information to determine the public transport accessibility index (A1) of the assessed building:
 - a) Distance (m) from the main building entrance to each compliant transport node
 - b) Public transport types serving the compliant node, e.g. bus and rail
 - c) Average number of services stopping per hour at each compliant node during the operational hours of the building for a typical day

2.30 J2-1 is located close to a public transport connection along James Kearns Avenue to the east, this is the nearest bus stop to the site which is located 178 metres walking distance from the unit. Plot J2-2 is located 393 metres walking distance from the nearest public transport connection. The walking distance from the different plots to the bus stop have been calculated using a safe pedestrian walking route. There are two public bus service (Rochdale Runners) which operates at a regular frequency of one service per hour 7 days a week. Accessibility Index has been calculated following BREEAM 2018 methodology and a copy of the BREEAM calculators for each unit are included at Appendix 3. The calculation shows that Plot J2-1 site has an Accessibility Index of 1.31, whilst Plot J2-2 has an Accessibility Index of 1.22.

3. PROJECTED MODAL SPLIT

- 3.1 At this stage, there are no end users lined up to occupy any of the two units being proposed at Plot J2. Therefore, to understand a likely modal split for staff commuting to the proposed development and set a benchmark for determining initial targets and objectives for the Travel Plan, 'Method of Travel to Work' data from the 2011 Census has been used (dataset WU03EW). The data provides information on the mode of travel used by all people travelling to the Rochdale 013 Middle Super Output Area (MSOA) for work. The modal split therefore reflects staff working within the wider Kingsway Business Park development and a copy of the output data is included at **Appendix 5. Table 6** shows the initial modal split and person trip generation calculations for the proposed development, which have been established using the peak hour vehicle trip generation calculations within the supporting Transport Statement.

Table 6. Modal Split and Person Trip Generation (staff)

Travel Mode	Mode Share	Person Trip Generation (morning peak hour)	Person Trip Generation (evening peak hour)
Underground, metro, light rail, tram	0%	0	0
Train	0%	0	0
Bus, minibus, coach	5%	8	7
Taxi	1%	2	1
Motorcycle, scooter, moped	1%	2	1
Driving a car or van	73%	112	105
Passenger in car or van	6%	9	9
Bicycle	1%	2	1
On foot	13%	20	19
Other	0%	0	0
Total	100%	230	204

- 3.2 The modal split in **Table 6** shows that car travel is forecast to have the highest mode share at 73%, with walking trips having the second highest mode share at 13%. Passenger car trips are estimated to have a mode share of 6%, whilst bus travel is forecast to comprise 5% of the mode share of staff commuting trips. The above modal split will be confirmed as part of baseline surveys undertaken of all staff once each unit is occupied, as the end user may have different working patterns/operational requirements that mean the modal split differs to the above. Nevertheless, it provides a useful starting point to work from.
- 3.3 The above modal split and person trip generation calculations will be used to identify initial targets for this Framework Travel Plan. The targets can then be refined as part of the Detailed Travel Plan once the site becomes occupied and baseline surveys have been carried out.

4. OBJECTIVES AND TARGETS

Introduction

- 4.1 Introducing targets provides a way of monitoring the success of the Travel Plan and to maximise its impact. Whilst the targets set out below are indicative and will be confirmed once baseline surveys have been carried out at each unit, this section identifies some indicative targets based on Census 'Method of Travel to Work' data.
- 4.2 The number one objective of this Travel Plan is to achieve a 10% reduction in single occupancy car journeys by displacing them into other modes. It will do this in a variety of ways, which include improving access to sustainable modes of transport and also through softer measures that encourage greater take up of non-car modes. The key objectives of this Travel Plan are summarised in **Table 7**.

Table 7. Travel Plan Objectives

Objective No.	Objective
Objective 1	Achieve a 10% reduction in single occupancy car journeys to/from the site by staff and visitors, by promotion of sustainable transport modes.
Objective 2	Improve access to sustainable modes of transport and encourage staff and visitors to make more considered transport journeys where possible.
Objective 3	Achieve a 5% reduction in the total mileage generated by supply/servicing vehicles.
Objective 4	Achieve a 100% Travel Plan awareness amongst staff at the development.

- 4.3 In order to achieve measurable outputs from the Travel Plan process, it is important to set targets from the outset against which progress can be measured. The following targets will be based upon the initial modal split calculations included at **Table 6**. The targets within this Framework Travel Plan are provisional and will be adjusted as a result of staff and visitor surveys once each unit becomes occupied/operational and confirmed as part of the Detailed Travel Plan(s).
- 4.4 The following targets will conform to SMART requirements, that is Specific, Measurable, Achievable, Realistic and Time-bound. This is important so that the targets maintain their validity and credibility during the course of the Travel Plan process.
- 4.5 The targets outlined below aim to deliver an improvement to the baseline position, which will be obtained through various travel surveys undertaken within three months of occupation of each unit. The details of the travel surveys are discussed further within **Section 5**. Targets are intended to cover five years from baseline surveys being carried out for each unit and aimed at generating a lower number of vehicular trips and percentage of car drivers than would be expected from a development without a Travel Plan (with a 10% reduction in single occupancy car trips being the initial target).

Targets – Staff

- 4.6 Initial modal split proportions for staff are shown in **Table 6**. The results identify a 73% modal share of single occupancy car journeys, however the site assessment details in **Section 2** confirm that there are good opportunities to walk and cycle and use public transport when travelling to/from the site.
- 4.7 Whilst details of the future staff travel behaviours are currently unknown, an initial target of achieving a 10% reduction in single occupancy car journeys has been set. This is considered realistic at this stage prior to baseline surveys being carried out based upon existing Census 2011 data but nevertheless can be updated as the Travel Plan progresses. **Table 8** shows how this target could be achieved by displacing a proportion of single occupancy car trips into other modes.

Table 8. Proposed Modal Split Targets

Travel Mode	Existing Mode Share	Proposed Mode Share (% increase)
Car Drivers	73%	65.67% (-7.3%)
Car Passengers	6%	8% (+2%)
Public Transport	5%	6.3% (+1.3%)
Pedestrians	13%	15% (+2%)
Cyclists	1%	3% (+2%)
Motorcycle, scooter, moped	1%	1%
Taxi	1%	1%
Total	100%	100%

Targets – Visitors/Suppliers

- 4.8 The proposed development has the potential to generate some movements by visitors and delivery vehicles. In general terms, there are no clear guidelines on achieving a reduction of single occupancy car journeys by visitors or suppliers and in most situations vehicles are required, for example for the delivery of raw materials or transporting finished products, although there may be scope to reduce the overall mileage made by these vehicles (with Objective 3 of this Travel Plan to reduce overall mileage by 5% - See **Table 7**). Overall, it will be useful to understand how these users are travelling to the site and the modes that they are using, in order to identify whether there are any measures that might encourage them to use more sustainable modes of travel, or to simply reduce the number of trips being generated. Therefore, travel surveys will be undertaken of these users to determine existing modes of travel and hence the potential for modal shift.

Secondary Targets (all modes)

- 4.9 Objective 4 of the Travel Plan (see **Table 7**) will be to achieve a 100% Travel Plan awareness across the development. Hence, every member of staff will be aware of the objectives of the Travel Plan, the opportunities that are available to travel to work and travel options for all types of journeys. This information will be provided to all staff prior to occupation.

- 4.10 By making staff and visitors aware of the Travel Plan, it is anticipated that all users within the development will gain a better understanding of how their travel choices impact society, what they can do to change their travel patterns and what benefits they could gain from using more sustainable modes of transport.

5. MEASURES AND INCENTIVES

Introduction

- 5.1 This section details the measures and incentives that will be implemented at the development in order to achieve the objective of reducing single occupancy car journeys by 10%. This will be achieved by promoting and increasing travel by walking, cycling, public transport and car sharing.
- 5.2 It is expected that the baseline and annual surveys undertaken by staff and visitors will provide a useful indication of travel patterns such that site specific measures and realistic initiatives can be developed across the site to gain the most success through the Travel Plan process. Measures can be fine-tuned to promote particular modes of sustainable travel for specific users. For example, if the surveys identify that the majority of staff travel in excess of 20 kilometres to the site, then walking and cycling measures may be removed and the focus could be on public transport and car sharing.

Travel Plan Coordinator

- 5.3 In 2007, Wilson Bowden Developments appointed a Travel Plan Coordinator (TPC) to implement the Travel Plan across the entire Kingsway Business Park. The role is undertaken by the Kingsway Management Company who have been the point of contact in liaising with business park occupants and their staff, helping businesses develop and monitor their own Travel Plan documents and implementing Travel Plan measures. The Kingsway Management Company would be retained as the TPC for the units at Plot J2.
- 5.4 The role and responsibilities of the TPC is as follows:
- Act as the principal point of contact for staff, visitors and suppliers for all Travel Plan matters.
 - Undertake and coordinate the data gathering exercises and monitoring reviews. This includes commissioning baseline surveys and compiling the results into annual Monitoring Reports (further details of which are provided in **Section 6**).
 - Develop and lead initiatives to promote sustainable travel awareness and sustainable modes of travel amongst staff, visitors and suppliers.
 - Research and promote the Travel Plan and introduce suitable, practical and affordable alternatives to single occupancy car-based travel.
 - Implement and promote the Travel Plan at site level across each of the three units.
 - Give advice and information on the Travel Plan to staff and visitors.

*The Developer/TPC will be responsible for updating RBC of any changes to the TPC's details over the course of the Travel Plan process.

Information Provision/Marketing Material

5.5 The TPC will be responsible for promoting the following measures and marketing material to staff and visitors.

- A Travel Plan Welcome Pack will be issued to all staff on the first day of work. This pack will comprise up-to-date sustainable travel information such as bus/train/tram service timetables, walking/cycling routes, as well as several incentives to influence travel habits - some of which are detailed below.
 - A map showing the location of local facilities such as food shops, cash points, post offices and transport interchanges.
 - Information on the financial incentives available to encourage staff to travel sustainably along with how employees can obtain these incentives. For example, staff who use sustainable modes of transport will be offered a free taxi in the event they require urgent car transport for an emergency, free use of pool cars for staff to be used at lunch times for shopping/leisure trips and also discounted vouchers to be used at local cycle shops.
- Travel information will be provided on the website of the future occupiers.
- Travel information will also be displayed on a noticeboard within the main entrance to each of the units. This will include similar information to the Welcome Pack but will be available continuously as a reminder. The TPC will be responsible for updating the noticeboards.
- Personalised journey planning will also be considered. This will confirm to staff whether they can viably access the site through more sustainable travel modes.
- Every six months, the TPC will liaise with RBC to ensure that the pedestrian, cycle and public transport information provided in the Welcome Packs is up to date.
- All results and progress will be publicised through emails/newsletter. This helps encourage staff to maintain/take up sustainable travel modes and illustrate how a difference is being made.

Parking Management

5.6 The TPC will prepare a Parking Management Plan to control parking at each of the units and help to minimise the disruption caused during shift changeover times. To do this, information/instructions will be provided to all staff that indicates where they should park and how to control movement around the site. Alternatively, parking spaces could be allocated to specific users, for example to those who car share, visitors and for those who fundamentally require a car to travel (i.e. those living in excess of 30 kilometres from the site). This should help to install some control over the car park whilst reducing the

number of vehicles travelling to the site. The TPC could help to manage the process by undertaking the following:

- Obtain details of all staff vehicle registration numbers so that these can be logged onto an internal system.
- Monitoring the car parking areas of Units J2-1 and J2-2 to ensure no vehicles are parked outside of designated parking bays.
- Monitoring the local roads to check whether staff vehicles are being parked off-site in undesignated areas.

5.7 The BREEAM requirements suggest that car parking at new developments be restricted or staff charged to use them. The TPC will liaise with the occupiers of each unit to see whether restricting or charging for the car park is a viable option and whether this could be implemented.

Electric Vehicle Charging

5.8 The provision of electric vehicle charging points will be secured as part of a Condition attached to any consent. This will ensure that each unit at Plot J2 provides the minimum amount of electric vehicle charging points. The TPC will monitor the amount of electric vehicle charging points at each unit to ensure it complies with the requirements. These facilities will allow staff to charge their vehicle whilst at work.

Walking Measures

5.9 Where practical to do so (i.e. 2 km walking radius), the TPC will encourage staff to walk to/from work or combine this as part of a longer journey by public transport. This could be encouraged by implementing the following:

- Promoting the health benefits of walking.
- Use of Google maps (www.maps.google.com) to plan routes and workout distances and journey times.
- Provide plans of walking routes, which would be made available through the Welcome Packs, noticeboards and via emails.
- Establish Walking User Groups.
- Promote the following websites:
 - Living Streets: www.livingstreets.org.uk
 - Walk it: <http://walkit.com/>
 - <http://www.rochdale.gov.uk/health-and-wellbeing/being-active/Pages/walking-for-health.aspx>

- Promote details of downloadable smartphone applications, such as:

Map My Walk (<http://www.mapmywalk.com/app/>), which is a GPS walking and step tracking application that can help identify a suitable route, including tracking duration, distance, pace and calories burned.

Walkmeter GPS Pedometer (<https://abvio.com/walkmeter/>) can be also used to help plan walking routes with maps, graphs, splits, zones and training plans.

- 5.10 The proposed pedestrian footways will be provided with street lighting columns to ensure that the conditions are suitable for night time hours. Details of a scheme of street lighting will be provided during the detailed design stages of the scheme.

Cycling Measures

- 5.11 The proposals include the provision of secure, covered cycle parking which is accessible via cycle on the shared footway/cycleway on the southern side of James Kearns Avenue which ties in with the existing shared footway/cycleways on John Milne Avenue and within the wider Kingsway Development. Suitable crossing points are also provided on Jon Milne Avenue, A664 and A6913 to connect cyclists to settlements in the local area. This infrastructure would provide direct connections to local settlements and amenities as well as public transport stops. There is already suitable signage to inform cyclists of the direction of travel to settlements and amenities and the proposed new infrastructure will tie into the wider facilities.

- 5.12 The TPC will also promote the following measures to encourage staff to cycle to/from work:

- Health benefits of cycling.
- The availability of cycle parking at the site and in the surrounding area, noting that individual cycle storage areas are being proposed at Units J2-1 and J2-2. This would be monitored to determine whether additional cycle parking is required once the units become occupied.
- Plans of cycling routes would be made available through the Welcome Packs, noticeboards and via emails.
- Establish Cycling User Groups.
- The occupier of each unit will sign up to the national 'Cycle2Work' scheme www.cycle2work.info. All staff would be entitled to purchase bicycles or related equipment tax free through monthly instalments.
- Promote the following websites:

- <http://www.cyclestreets.net/> - to plan routes to/from the site and workout distances, best routes, on and off-road routes, health benefits and times for each journey using a bike.
- Cycle Map: www.sustrans.org.uk
- Promote smartphone applications, such as:

Cycle Streets (<http://www.cyclestreets.net/mobile/>) can be used to plan routes from A to B anywhere in the UK, including the option to select routing mode from beginner to regular commuters.

Map My Ride (<http://www.mapmyride.com/app/>) is similar to the Map My Walk application. It also tracks fitness activities, including distance ridden, route planning and duration.

- 5.13 The Kingsway Partnership encourages and supports the development of a Bicycle User Group across Kingsway Business Park, which would be extended to include the occupiers of Plot J2. Bicycle User Groups are groups of people who want to improve facilities for cyclists and encourage others to cycle and provide a means of socialising. Bicycle User Groups can encourage and organise routes for people who live in the same direction to cycle to and from work together. A Bicycle User Group can be supported by the provision of cycle repair kits, training through a partnership with a local cycle hire/sales business or an on-site mechanic.
- 5.14 Each unit at Plot J2 will be provided with a sufficient amount of cycle parking in line with the Councils adopted standards. The masterplan shows cycle parking in excess of the minimum requirement. In addition, shower and changing room facilities will be provided at each unit. These facilities should encourage staff to travel by bicycle however once the units are operating staff should be able to request additional facilities where required for consideration with the business owners and TPC.
- 5.15 The BREEAM requirements require consultation with the local authority on the state of the existing cycle network. However, as this development relates to the wider outline permission where infrastructure improvements were negotiated and agreed, further improvements should not be required at this stage and no further consultation should be required.

Car Sharing Measures

- 5.16 At this stage and prior to end occupiers being identified, it is unknown what hours the units would operate between and whether staff would work within set shift times. However, there is likely to be scope for staff to car share where they live near each other, or the journeys are on-route. The TPC will therefore identify which staff have the potential to car share through a simple postcode survey and encourage this by offering incentives such as allocated parking spaces or ensuring that staff are able to get a free taxi home in the event they require a car or are let down by the driver.
- 5.17 Transport for Greater Manchester has developed a car sharing database for use by businesses in Greater Manchester. The CarShareGM scheme is free to use and can be

used to either review car sharing opportunities within individual businesses or for wider journeys to a specific area. The CarShareGM scheme is promoted to businesses relocating to Kingsway.

- Benefits of car sharing, which include:
 - Financial savings on fuel and mileage.
 - Reduced carbon footprint, congestion and improved journey times.
 - A useful contribution towards reducing parking demand, particularly during shift changeover times.
 - Reduces the need for a private car.
- Promote the following websites:
 - Business Lift Share: <http://business.liftshare.com/>
 - Car Plus: www.carplus.org.uk/
 - Energy Saving Trust: www.energysavingtrust.org.uk/Travel
- Promote smartphone applications, such as:

The Liftshare application, which has to date over 400,000 Liftshare members (<http://blog.liftshare.com/app>)

BlaBlaCar – Trusted Ridesharing (<https://www.blablacar.co.uk/apps-mobile>)

Public Transport Measures

5.18 The site is located within convenient walking distances of regular bus and tram services as well as train services from Rochdale Train Station. Therefore, the TPC will encourage staff to travel using public transport by completing the following:

- Provide staff and visitors with information of public transport services, timetable and ticketing information. This will be included in the Welcome Packs, posted on noticeboards at the entrance to the unit and circulated via email.
- Offer interest free loans to allow employees to purchase bus/train tickets or the TPC can negotiate with local bus operators over the availability of offering staff with discounted tickets.
- The TPC will review the existing bus stops to ensure that the current facilities offer a pleasant waiting area for people catching the bus.
- Promote the following websites:
 - <https://www.thetrainline.com/>
 - <https://www.traveline.info/>
 - www.greenerjourneys.com
- Promote smartphone applications, such as:

The official Trainline application, which provide live train journey times, duration, offers, instant ticket purchase and many other services (<https://www.thetrainline.com/information/apps>).

- 5.19 In the longer term, there is an ambition to secure commercially operated public bus services through Kingsway Business Park. The business case for this will be strengthened as additional businesses relocate to Kingsway and staff travel demands justify the introduction of a new or amended service(s) to the business park. The TPC will then be able to negotiate with local bus operators to improve bus connectivity through the development.
- 5.20 With the future introduction of bus services through the business park, new stop and passenger waiting facilities will be required, including new shelters, seating, lighting and CCTV. The Kingsway Partnership and TP will therefore maintain discussions with bus service operators regarding the potential for new/re-routing of new public bus services to the business park.
- 5.21 In August 2017, Transport for Greater Manchester introduced smart ticketing across Greater Manchester. The 'Get Me There' smart card is used for tickets and travelcards and is currently available for use across bus local link and tram within Greater Manchester. Opportunities to provide discounted or preloaded 'Get Me There' cards will be discussed with businesses occupying the units at Plot J2 as part of their Travel Plan requirements.

Taxi

- 5.22 The car parks for each individual unit will provide space for taxis to collect and drop off staff. If taxis are required to wait on-site before collection, then they will be entitled to use one of the car parking bays or wait on the access road, which will not have parking restrictions. There are suitable turning facilities on the access road or within the car parks for taxis to manoeuvre safely.

Long Term Measures

- 5.23 To ensure the continuation of the Travel Plan in the long term, all of the immediate and short-term measures will be reviewed and updated as required. This will ensure effective measures are promoted, less effective measures are stopped or improved and new measures are implemented.
- 5.24 All staff will be encouraged to promote sustainable transport ideas and share any information or new ideas they may have to improve the Travel Plan with the TPC. By encouraging everyone to take an active role in the implementation of the Travel Plan, people are more likely to make changes to their travel habits and be conscious of the travel choices. This can be done through promotion material.
- 5.25 The TPC will contact RBC's Travel Plan Officer to ask for advice regarding travel measures, discuss any new measures that are being implemented and discuss any changes to the transport facilities in the vicinity of the development.

6. IMPLEMENTATION AND MONITORING

Monitoring

- 6.1 The Travel Plan is a 'live document' and a continuous process for improvement/refinement which requires regular monitoring, review and revision to ensure that it remains relevant to the site and those using it.
- 6.2 In line with national travel planning guidance, monitoring will take place over a 5-year cycle from baseline surveys being undertaken (which would commence within three months of initial occupation of each unit – subject to it being a neutral month). Annual surveys would then be undertaken thereafter, again during a neutral month. It will be the responsibility of the TPC to oversee the Travel Plan process and implement the measures and monitoring surveys, however these could be carried out by an independent third-party company/consultant.
- 6.3 The staff travel surveys will be agreed with RBC prior to being distributed. They will contain multiple choice questions asking staff for details on their home postcode, main mode of travel to the site, main reason for using that mode, and what would encourage them to use an alternative mode. **Appendix 6** includes an example template of a staff travel to work survey.
- 6.4 In addition to the travel surveys, other key indicators will be measured such as the success of the Parking Management Plan, uptake of measures such as the car sharing scheme and demand within the cycle parking facilities. Information will also be obtained from staff to monitor the rates of awareness to ensure that the 100% objective of being achieved.
- 6.5 The results of the surveys will be collated by the TPC and presented in a short report to RBC for discussion and agreement within one month of the surveys forms being collected. The surveys will identify whether the initial targets are likely to be met and whether any revised or new targets should be introduced. The setting of any new or altered targets will be first agreed with RBC prior to their inclusion in the Travel Plan.

Annual Monitoring Report

- 6.6 Monitoring Reports will be produced on an annual basis and issued to RBC's Travel Plan Officer. The reports will identify future initiatives/measures and targets that are specific to each unit and the current staff so that the measures and targets are specific and realistic for those particular users. RBC will provide comments on the report, which will be incorporated into the Travel Plan document. As mentioned, the annual monitoring will take place for a period of 5-years following baseline surveys of staff at each unit to tie in with the timescales of achieving the Travel Plan targets.
- 6.7 The Annual Monitoring Report will include the annual survey results, analysis of trends against previous years and brief details of any new measures undertaken throughout the past year. The document will also include any relevant information on changes of personnel and brief details of plans for the coming year. The TPC will be responsible for producing the Annual Monitoring Reports.

6.8 The Monitoring Report should comprise the following:

- 1) A survey of staff and visitor travel patterns, (main and preferred travel modes and home postcodes).
- 2) An analysis of the survey data.
- 3) Current travel issues.
- 4) An update of work carried out over the year to promote sustainable travel at the site.
- 5) Up to date information on the current opportunities for sustainable travel, including the latest public transport timetable details.
- 6) An action plan of what is to happen the following year, including a marketing plan of how the initiatives have been/are to be promoted e.g. Welcome Packs, noticeboards, posters, newsletters, emails etc. with examples.
- 7) Modal split targets to indicate how successful the plan has become.
- 8) Up to date contact details for the TPC.
- 9) Appendices to contain any meeting notes, letters to staff, memos, internet information etc.

6.9 The above surveys and monitoring practices will help identify what initiatives are 'working', any barriers to using any particular mode and identify whether any further action is required to encourage particular modes of travel. For example, the surveys may identify a need for more cycle parking due to higher demands, which can then be implemented the following year to further increase the rates of cycling.

Remedial Actions

6.10 It is important that the targets set within the Travel Plan are met. The TPC would liaise with RBC to outline additional actions should this not prove to be the case and determine what else may be required to ensure the success of the Travel Plan.

6.11 The need for any remedial measures will be established following the production of the Annual Monitoring Reports. If the targets are not met the TPC will review and identify which measures are contributing and which are not, to help achieve the overall target. Remedial actions could include one or a combination of the following:

- Monitoring period of the Travel Plan may be increased if targets are not reached.
- Further funding and resourcing could be allocated to support the TPC and promotional actions that are inclined towards the promotion of sustainable travel.
- Personal Journey Planning would be offered to all staff/visitors.
- Include those 'additional measures/areas for action as outlined in Section 6.

6.12 The requirements of any remedial measures will depend on how much effort has been made to ensure the success this Travel Plan. If, for reasons outside of the occupier's control, the Travel Plan targets have not been achieved, any additional measures proposed should not be overly onerous to implement.

7. ACTION PLAN

7.1 **Table 9** provides a timetabled Action Plan setting out when each element of the Travel Plan should be completed. This will give the Travel Plan the best chance of achieving its targets and to effectively manage/monitor the rates of car travel to and from the site. The Action Plan identifies how the measures set out in this document will be implemented at the timescales anticipated, to meet the targets set.

Table 5. Action Plan

Proposed Measures & Actions		Timetable for Implementation
Initiating the Travel Plan	Preparation of Travel Plan to outline measures to be taken forward	Completed
	Appointment of TPC – end occupier(s) to provide adequate funding to support role of the TPC, subsequent monitoring surveys and implementation of any measures for a minimum of five years	Prior to Occupation
Information Provision	Preparation of Travel Welcome Packs	Prior to Occupation
	Distribution of Travel Welcome Packs	On occupation and ongoing
	Prepare an information pack for the noticeboard at reception of each unit	On occupation and ongoing
	Update Transport Information	Ongoing
	Travel Plan update newsletter	Periodically/annually
	Offer staff with the possibility of obtaining discounted/free bus/tram tickets	Within Welcome Pack on occupation
General Promotion of Sustainable Travel	Provide location/contact details within Travel Welcome Packs of local amenities such as retail shops, public transport stops, restaurants/pubs/takeaways that are likely to be used by staff on a regular basis	On occupation
	TPC to promote and actively encourage participation in national events, such as national Walk to Work week (April); Bike Week (June); Green Transport Week (June/July); and Liftshare Week (October)	Ongoing
Promotion of Walking	Provide maps and information on walking routes, including key destinations and public transport links	On occupation
	Promote the health benefits of walking	On occupation
	Promote the concept of walking groups	On occupation
	Highlight facilities within 2km of the site	On occupation
Promotion of Cycling	Provide maps and information on local cycle routes	On occupation
	Offer staff with the option to sign up to the national cycle2work scheme	On occupation
Promotion of Public Transport	Provision of public transport information to staff with a summary of local bus services and bus stop locations	On occupation
	Provision of up-to-date timetable information to all staff	On occupation

Promotion of Car Sharing	Inclusion of car sharing information in Travel Welcome Packs	On occupation
	Promotion of the car share website	On occupation
Monitoring, Evaluation and Marketing	Baseline travel survey agreed with RBC and completed by TPC using industry-standard compliant survey methodology.	Within three months of initial occupation
	Detailed Travel Plan to be prepared which includes the results of travel surveys and finalises targets. To be submitted for approval by the planning authority	Within one month of receiving baseline survey results
	Undertake annual surveys for a period of 5 years of initial occupation of each unit following baseline surveys being undertaken to establish changes in travel patterns/modal split and quantify achievements	Within the same month for a period of 5-years
	Review modal split and identify measures/remedial actions to implement where appropriate	Annually
	Produce Monitoring Reports and distribute to RBC	Annually
	Publicise results and progress	Within one month of receiving annual surveys
	Review and update Action Plan	Following survey results

Operated by
Rosso

Additional information

Alternative format

To ask for leaflets to be sent to you, or to request large print, Braille or recorded information phone 0161 244 1000 or visit www.tfgm.com

Easy access on buses

Journeys run with low floor buses have no steps at the entrance, making getting on and off easier. Where shown, low floor buses have a ramp for access and a dedicated space for wheelchairs and pushchairs inside the bus. The bus operator will always try to provide easy access services where these services are scheduled to run.

Using this timetable

Timetables show the direction of travel, bus numbers and the days of the week.

Main stops on the route are listed on the left.

Where no time is shown against a particular stop, the bus does not stop there on that journey.

Check any letters which are shown in the timetable against the key at the bottom of the page.

Where to find information about service changes

www.tfgm.com

Bus station posters

Leaflets from outlets.

Tickets and information

Bus companies offer a range of tickets for use on their own buses. For travel on any service in the County, use System One tickets, including DaySaver. Travelshops provide tickets, information and journey planning advice on buses, trains and trams for work and pleasure.

Using the 24 hour clock

Times are shown in four figures. The first two are the hour and the last two are the minutes.

0753 is 53 minutes past 7am

1953 is 53 minutes past 7pm

This diagram shows the R6 route in Rochdale. It starts at Rochdale Town Centre, goes to Drake Street, then to Milnrow Road, and finally to Rochdale Railway Station. From Rochdale Railway Station, the route continues to Oldham Road, then to Lower Place, and finally to Kingsway. The map also shows connections to Trains to Manchester, Trains to Halifax, and Trains to Manchester. Other landmarks include Rochdale, Rochdale Station, and Rochdale Town Centre.

This diagram shows the R6 route in Ladyhouse. It starts at Ladyhouse, goes to Egremont Road, then to Beechfield Road, and finally to Harbour Lane. From Harbour Lane, the route continues to Elizabethan Way, then to Dale Street, and finally to Cornfield Street. The map also shows connections to Trams to Rochdale, Trams to Manchester, and Trams to Manchester. Other landmarks include Ladyhouse, Egremont Road, Beechfield Road, Harbour Lane, Elizabethan Way, Dale Street, and Cornfield Street.

This diagram shows the R6 route in Kingsway. It starts at Kingsway, goes to Sir Isaac Newton Way, then to Kingsway Business Park, and finally to John Milne Avenue. From John Milne Avenue, the route continues to Asda, then to Sir Isaac Newton Way, and finally to Kingsway. The map also shows connections to Trams to Rochdale, Trams to Manchester, and Trams to Manchester. Other landmarks include Kingsway, Sir Isaac Newton Way, Kingsway Business Park, John Milne Avenue, Asda, and Sir Isaac Newton Way.

Buses run via John Milne Avenue
on journeys both to and from Rochdale

Additional information

Alternative format

To ask for leaflets to be sent to you, or to request large print, Braille or recorded information phone 0161 244 1000 or visit www.tfgm.com

Easy access on buses

Journeys run with low floor buses have no steps at the entrance, making getting on and off easier. Where shown, low floor buses have a ramp for access and a dedicated space for wheelchairs and pushchairs inside the bus. The bus operator will always try to provide easy access services where these services are scheduled to run.

Using this timetable

Timetables show the direction of travel, bus numbers and the days of the week.

Main stops on the route are listed on the left.

Where no time is shown against a particular stop, the bus does not stop there on that journey.

Check any letters which are shown in the timetable against the key at the bottom of the page.

have been swapped between different geographic areas. Some counts will
be affected, particularly small counts at the lowest geographies

APPENDIX 6: Staff Travel to Work Survey Template

Workplace Travel Survey

The purpose of this survey is to identify existing and future travel patterns, to allow identification of possible targets and measures to increase sustainable travel. All information you provide will be strictly confidential, and will be used to develop the Travel Plan.

The questionnaire will only take two to three minutes to fill out, and we would be grateful if you could answer the questions and return it to **XXXXX**. If you have any queries about this questionnaire or the proposed development please contact **XXX**.

1. How did you travel to work today?

- ☐ Bus
 - ☐ Train
 - ☐ Bicycle
 - ☐ On foot
 - ☐ Car (drive alone)
 - ☐ Car (drive with others)
 - ☐ Car passenger with friend/family
 - ☐ Car passenger with colleague
 - ☐ Motorbike/moped
 - ☐ Taxi
 - ☐ Other (please specify)
-

2. Which of the following would you occasionally use instead of your usual mode of travel?

- ☐ Bus
 - ☐ Train
 - ☐ Bicycle
 - ☐ On foot
 - ☐ Car (drive alone)
 - ☐ Car (drive with others)
 - ☐ Car passenger with friend/family
 - ☐ Car passenger with colleague
 - ☐ Motorbike/moped
 - ☐ Taxi
 - ☐ Other (please specify)
-

3. If you intend to use a car, what is the main reason for using a car to travel to work?

- ☐ Car essential to perform job e.g. travel to meetings/between sites
- ☐ Car is the cheapest means of travel
- ☐ Car is the fastest means of travel
- ☐ Need car for activities before and after work e.g. dropping off/collecting children
- ☐ I get a lift
- ☐ Health reasons
- ☐ Lack of an alternative
- ☐ Other (please specify)

4. What would make you shift to another method of travel to get to and from work?

- ☐ Worsening traffic conditions
- ☐ Discounts on bus travel cards
- ☐ Improvements to existing alternatives
- ☐ Lack of parking spaces
- ☐ Parking charges
- ☐ Other (please specify)

5. Would you be prepared to car share to travel to and from work provided that it is convenient to you to do so?

- ☐ Yes
- ☐ No

If your answer is no, please state why:

6. Which of the following would most encourage you to car share?

- ☐ Help in finding car share partners with similar work patterns
- ☐ Free taxi home if let down by car driver
- ☐ Reserved parking for car sharers
- ☐ Reduced car parking charges for car sharers
- ☐ Other (please specify)?.....
- ☐ None of these

7. For those of you who currently use a car to travel to work, do you think you could realistically use an alternative mode of transport to the retail park?

- ☐ Yes
- ☐ No

If **Yes** which mode could you use

- ☐ Car share
- ☐ Bus
- ☐ Train
- ☐ Bicycle
- ☐ On foot
- ☐ Car passenger with friend/family
- ☐ Car passenger with colleague
- ☐ Motorbike/moped
- ☐ Taxi
- ☐ Other (please specify) _____

If **No** please state why _____

8. Are you:

- ☐ Male
- ☐ Female

9. Your age?

- ☐ Under 25
- ☐ 25-34
- ☐ 35-44
- ☐ 45-54
- ☐ 55 or over

10. What is your home postcode? (this information is used to determine walking/cycling distances to work and not to identify individuals)

Thank you for taking the time to fill in this questionnaire. If you have any further comments to add on your travel to work, please write them below.
