

Hollingworth Fold Glamping - Parking management plan

The site will be committed to reducing the number of cars associated with the development where possible. The following plan indicates the various methods of travel and the parking provisions available on and off the site.

On-site parking:

A total of 9 no parking bays will be provided on-site. One will be an accessible parking bay to provide efficient space for any wheelchair users and blue badge holders. The spaces will be dedicated to the glamping pods and tents with each unit being allocated one bay each. It is only expected for one car to be associated with each pod/tent however in the rare case there will be more than one car per pod/tent, the additional cars will be directed to alternative off-site parking detailed below.

This information will all be displayed on the booking platforms to ensure guests are well aware of where to park and what to expect.

It is not expected for all units to have full capacity all year round therefore we don't believe there will be 9 cars associated with the development all year round. As to be expected, this will fluctuate depending on the season. As the tents will be seasonal and taken down in the winter months, additional spaces will be available to cater for the 6 pods.

Off-site parking:

In the event of more than one vehicle arriving per unit, additional overflow parking is available at the Hollingworth Country Park/Visitor Centre. Parking passes will be provided to guests so no additional payment is required.

Any additional cars associated with the tent pitches will also be directed to these facilities.

This information will also be provided on the booking platforms and will require guests to agree to the conditions before booking.

Secure bike storage:

A secure bike store will be sited next to the parking bays to provide safe bike storage for guest use. Guests will require to bring their own personal bike lock to ensure their bikes are secure in the storage container. A key will be required to open the door, this will be safe in a code-protected lock box with the key attached so it cannot be lost by any guests. The code will be given upon arrival to the guests who have requested use before arrival.

The code will be changed and reset every week as a safety precaution.

A bike repair station will be situated outside the storage unit for guest use when necessary.

Public Transport options:

As there are a number of alternative transport options in the area, such as trains and buses, a discount will be given to those guests who choose not to travel by private car. This is to help encourage sustainable transport methods and reduce the reliance on private vehicles.

This information will all be provided on the booking platforms and through the general website.
