PRELIMINARY RISK ASSESSMENT (DESK STUDY)

INTRODUCTION

A residential development is proposed. The objective is to carry out a Preliminary Risk Assessment to consider contamination, landfill gas and geotechnical issues.

SITE DESCRIPTION

The site is an irregular shape, about 52 by 25m, located to the southwest of Castle Hill Crescent in Rochdale and at OS Grid Reference 389160, 412760. The site, inspected on 9/4/25 by Mr M Whitaker, slopes down to the southeast. There is a split level house at the northwest/middle with a partially built extension at its southwest. At the southeast/southwest of the house, is a flagged patio and flat roof, over a lower ground floor room. The southeast of the site is a grass lawn and the northwest is a concrete surfaced area with a storage container and kennel at the northwest. There are no notable trees (not an arboricultural survey).

The site is on the southeast side, and towards the base, of a small hill. The land falls away from the southwest, and site to the southeast then northeast.

PROPOSED DEVELOPMENT

It is proposed to build a three storey apartment block at the centre of the site, at the lower level. There will be car parks at the southeast (at the lower level), and northwest (about 2.5m high than ground floor level), with communal landscaping at the southwest and surrounding landscaped areas.

LEGAL/COPYRIGHT

Material may be included in this report from Ordnance Survey (Licence No. AL100031635), Landmark, Environment Agency, Coal Authority and others. It may be copyright and the usual restrictions apply. This report can only be relied upon if the invoice has been paid promptly and in full. This report may be signed by an individual, but only on behalf of Worms Eye Limited.

NOT INCLUDED IN THE REPORT

- Arboricultural or Invasive Plant Survey (Japanese Knotweed etc.).
- Asbestos Survey
- Mining Risk Assessment.
- Flood Risk Assessment.
- Underground Services Survey.

General comments may be made where they are applicable to the environmental and geotechnical risk assessment. These do not constitute a detailed risk assessment.

DATA SOURCES

The following data sources have been viewed in compiling this report.

- BGS, Geology Map, 1:50000 scale, Solid and Drift Edition
- BGS, on-shore boreholes scans
- Landmark Envirocheck Report, 4/4/25
- Ordnance Survey, Historical Maps, 1:10000 and 1:2500 scale
- Walkover Survey, 10/4/25

This report is referred to as a Preliminary Risk Assessment (PRA), alternative names are 'Phase I' Report (Phase II being the intrusive work involving boreholes etc.) or a Desk Study.

ENVIRONMENTAL DATA

A Landmark Envirocheck report and geological maps have been reviewed, the following is a summary of the combined data. The Envirocheck report indicated none of the following within 250 metres:

- Contaminated land register entries
- Discharge consents
- Substantiated pollution incidents
- Water abstraction points or Source protection zones
- Fuel stations
- Sensitive land uses

Geology of Site

The geological map indicates that the underlying solid rocks are unnamed strata, usually mudstone, of the Pennine Lower Coal Measures Formation.

Surface drift is shown as Glaciofluvial Sand and Gravel of unknown thickness and natural subsidence hazards are shown as very low to no hazard.

Surface Water (Hydrology)

The nearest water course is the River Roch 300m northwest.

There are 2 pollution incidents to surface water listed within 250 metres:

- Minor incident – Unknown pollutant to unknown receiver in 1995, 125m east *
- Minor incident – Oils to tributary Sudden Brook in 1995, 154m west *

The flow of surface water is expected to be to the northeast.

* not relevant due to distance/severity/significance

Flooding (General)

Flooding can occur for many reasons other than those dealt with by the EA maps. These include:

- burst pipes, blocked drains, sewers and culverts
- inadequate drainage, cloudbursts/flash flooding overwhelming drainage systems

Statements in this report such as 'clear of flooding/flood plain' and 'flooding – no further action' are references to the EA river and sea flood maps and are no guarantee that flooding will not occur.

Groundwater Flooding - Limited potential for groundwater flooding to occur.

Flooding from Rivers - Shown to be clear of flooding from rivers.

Surface Water Flooding - Shown to be clear of surface water flooding.

Groundwater (Hydrogeology)

The solid rocks and superficial (drift deposits) under the site are indicated as Secondary A aquifers.

Groundwater flow is likely to follow the topography and move to the northeast.

Landfill Sites

There is a recorded landfill site listed 198m southwest, the first input date is listed as 1969 but no details are given on the final input date or waste types.

Filled Ground

There is a suspected filled feature immediately east.

Hazardous Substances Sites

There are three Control of Major Accident Hazard Sites (COMAH) listed 185-194m northwest *

There are three Planning Hazardous Substance Consents for Liquified extremely flammable gas (including LPG) and natural gas (whether liquefied or not) listed:

- 171m northwest
- 210m north
- 224m north

* not relevant due to distance/severity/significance

Radon

The site is in a lower probability radon area as less than 1% of homes in the area are above the radon action level. Radon protection measures are not required.

Mining

The Coal Authority Interactive Mapping shows:

- Not underlain by probable shallow workings.
- Not underlain by underground workings.
- No nearby coal seams or mine entries.

Nearby Industry

There are 4 trade entry listings within 150m, as follows:

- 49m east, Car breakers and dismantlers, Inactive (3 listings).
- 77m northeast, Hospitals, Active *
- 111m south, Machinery: industrial and commercial, Inactive *
- 114m north, MOT testing centres, Active *

* not relevant due to distance/severity/significance

SITE HISTORY

Date	On Site	Off Site
1851 (1:10,560)	Undeveloped plot, part of sand pit, at the southeast end.	Gas works 190m northeast. Sand pit extends to east. Houses 20m northeast, 30m southeast. Track for colliery 12m south with slope down to track immediately south. Castle Hill 60m north.
1892	Sand pit not present, possibly filled, and site is now a wooded area as part of grounds to Castle Hill.	Church 40m west and vicarage 35m northwest. Gasometers >125m northwest. Road 10m south on former colliery track.
1910 (1:2,500)	Undeveloped plot.	Filled ground 240m south. Housing 15m south.
1930 (1:2,500)	Undeveloped plot.	Filled ground 160m southwest. Field 110m southwest, probably filled.
1956-61 (1:2,500)	House on centre of site.	House 15m northeast. Garage 195m northeast. Gasometer 100m northwest.
1967	Little or no change.	No relevant change.
1988 (1:10,000)	Little or no change.	Landfill >110m southwest. Depot 190m north. House immediately west.
2003 (1:10,000)	Little or no change.	Landfill to southwest complete and School built 195m south.
2025 (1:10,000)	Little or no change.	Part of Gas Work to northwest dismantled/demolished with gasometers removed and voids likely filled.

DISCUSSION

Contamination

The site is a house, not a use from which contaminants would be expected, however, bearing in mind the split level layout there is potential for made ground, with associated low levels of contaminants, to have been imported prior to construction. Furthermore, the site was previously part of a sand pit at the southeast, and made ground may also be present if the sand pit was filled. Low levels of contaminants may also be present from building materials (Asbestos, sulphate, metals, PAHs).

There have been no nearby land uses which will affect the site. The nearest being either too far away for contaminants to migrate over, or down the hydraulic gradient.

The proposed development will be apartments with communal garden, landscaping and car parking. Potential pollutant linkages are considered to be:

- Direct contact with and ingestion of soil.
- Inhalation and ingestion of dust.
- Sulphate attack on buried concrete.
- Contaminants entering drinking water pipes.

High levels of contaminants are not expected, however, low levels may be present which exceed stringent residential thresholds, but are not expected to exceed appropriate thresholds for an apartment block over wide areas and a low risk is anticipated.

Controlled Waters

There is an underlying Secondary A aquifer beneath sand and gravel. There are no nearby water abstraction points or source protection zones.

The River Roch is 300m northwest.

Although the landscaped areas/communal garden will allow rainwater to pass through the surface soils, contamination is not expected at high levels, and bearing in mind the absence of nearby receptors, it is anticipated there will be no risk to controlled waters.

Landfill Gas/Ground Gas

There is a former landfill site 198m southwest, probably part of an area of filled ground >110m southwest. Although no details are known on waste types, the age of known filling post 1969 suggests it may include degradable waste and a high gas generation potential is considered possible.

Smaller filled features within 250 metres (especially gasometers to the northwest) are potential sources of ground gases which could migrate to and present a risk to the development. However, these are considered of less risk than the landfill.

The southeast of the site was shown as part of a sand pit. If filled this may contain made ground which is a possible ground gas source, expected to be very low to low (if any) bearing in mind the age.

Bearing in mind the distances a low to moderate gas risk is considered possible.

Radon

Radon protection measures are not required.

Flooding

The Environment Agency maps show that this site is clear of flooding from rivers and surface water flooding.

The site is shown to be in an area with limited potential for groundwater flooding to occur.

Foundations

Made ground may be present, with underlying sand. This can provide variable conditions for foundations and a range of options may need to be considered.

INDUSTRY PROFILE

The site has had no industrial use but made ground may be present, especially at the southeast.

Source of Contaminants	Possible Contaminants
Made Ground	Metals: copper, zinc, chromium, nickel, lead, cadmium, arsenic, Inorganic compounds: cyanide, sulphates Phenols Mineral oils, fuel oils (TPHs) Asbestos General hydrocarbons (PAHs)

CONCEPTUAL MODEL

A conceptual model based on the source-pathway-receptor concept is included.

Source	Receptors	Pathway	Potential/Likely Pollutant Linkage
Asbestos	End-users	Inhalation	Possible
	Off-site	Migration off-site	Possible
Inorganic contaminants	Householders	Direct contact, ingestion, ingestion and inhalation of dust	Yes
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Sulphate	Building fabric	Concrete directly in contact with soil	Possible
Hydrocarbons	Householders	Direct contact, ingestion, ingestion and inhalation of dust	Yes
	Service pipes	Seeping into drinking water pipes	Possible
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Hydrocarbon vapours	Householders	Inhalation of vapours indoors and outdoors	No
Landfill gas	End-users (inside)	Seeping into buildings, explosion, asphyxiation	Yes
Radon	End-users (inside)	Seeping into buildings	No

CONCLUSION

Bearing in mind the layout of the site we recommend undertaking future investigations after demolition of the existing house, and after on site concrete has been removed.

Contamination

Taking into account the site history it is expected that contaminants will be present at raised levels. High levels are not expected, or expected to exceed appropriate thresholds over a wide area, but levels may exceed thresholds in places. An intrusive investigation is required, consisting of boreholes/ trial holes and tests to confirm the presence/absence and extent of contamination on the site. The southeast (former sand pit) is a specific point sources for contamination and the investigation will need to target this, proposed garden/landscaping, proposed building and provide all round coverage.

Controlled Waters

No risk to controlled water is expected and no further action is considered necessary at this stage. This may need to be reviewed following the soil tests.

Landfill Gas/Ground Gas

There is a nearby landfill site and filled areas from which a low gas risk is considered possible.

A gas testing programme is required.

Radon

Radon protection measures are not required.

Flooding

The EA maps indicate that the area is clear of flooding from rivers and surface water flooding. These maps are fairly crude and it is beyond the scope of this report to provide a comprehensive flood risk assessment. For greater confidence a detailed flood risk assessment should be obtained.

Foundations

A series of boreholes are required in the area of the proposed building to allow the most suitable foundations to be designed.

Yours faithfully

on behalf of Worms Eye Ltd

1. This report should be considered in relation to the objectives agreed between Worms Eye and the Client, outlined in the introduction.
2. For the work, reliance has been placed on publicly available data, obtained from the sources identified in the report. The information is not exhaustive and further information may be available from other sources. When using the information it has been assumed it is correct, and no attempt has been made to verify the information.
3. This report has been produced in accordance with current UK policy and guidelines, for land and groundwater contamination, enforced by the Local Authority and the Environment Agency.
4. During the site walkover, reasonable effort was made to obtain an overview of the site. However, no attempt was made to enter areas that are unsafe, a risk to health and safety, locked, barricaded, overgrown, or areas not made accessible.
5. Access, the presence of services and activities on the site, limited locations where sampling could be carried out and the techniques that could be used.
6. Assessments are based on available information at the time of writing and are ultimately for the decision of the regulatory authorities.
7. The conclusions and recommendations provide an overview and guidance only and should not be specifically relied upon without considering the context of the report in full.
8. Worms Eye cannot be held responsible for any use of the report or its contents for any purpose other than that for which it was prepared. The copyright of this report, and other plans or documents prepared by Worms Eye, is owned by them, and no such plans or documents may be reproduced, published or adapted without written consent. Complete copies may be made and distributed by the client, as expected, in dealing with matters related to its commission. Should the client pass copies of the report to other parties for information, the whole report should be copied, but no professional liability, or warranties, shall be extended to other parties by Worms Eye, without their written agreement.
9. New information, revised practices, or changes in legislation, may necessitate the re-interpretation of the report, in whole or in part.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Lancashire And Furness

Published 1851

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.
