PHASE 1: DESK TOP STUDY & COAL MINING RISK ASSESSMENT **REPORT**

PROPOSED COMMERCIAL DEVELOPMENT

473 - 475 OLDHAM ROAD

ROCHDALE

OL16 4TD

Project No: 22-562

Prepared By:

Nicole Laing

A handwritten signature in dark ink, appearing to read 'Nicole Laing', written over a light blue grid background.

Date: 9th September 2022

Approved By:

Matt Bradford

A handwritten signature in dark ink, appearing to read 'Matt Bradford', written over a light blue grid background.

Date: 9th September 2022

The information and / or advice contained in this Phase 1: Desk Top Study and Coal Mining Risk Assessment Report is based solely on, and is limited to, the boundaries of the site, the immediate area around the site, and the historical use(s) unless otherwise stated. This 'Report' has been prepared to collate information relating to the physical, environmental and industrial setting of the site, and to highlight, where possible, the likely problems that might be encountered when considering the future development of this site for the proposed end use. All comments, opinions, diagrams, cross sections and / or sketches contained within the report, and / or any configuration of the findings is conjectural and given for guidance only and confirmation of the anticipated ground conditions should be considered before development proceeds. Agreement for the use or copying of this report by any Third Party must be obtained in writing from Arc Environmental Limited (ARC). If a change in the proposed land use is envisaged, then a reassessment of the site should be carried out.

1.0 Introduction

September 2022

Arc Environmental Limited (ARC), were instructed by Wrightson Associates, to undertake a Phase 1: Desk Top Study & Coal Mining Risk Assessment Report for a vacant parcel of land off Oldham Road, Rochdale, where proposals have been made to redevelop the site with two new retail units and associated carparking, with a small, landscaped area adjacent to Oldham Road.

The primary objectives of the report are to assess the geological and land contamination conditions on and beneath the surface, and a preliminary Conceptual Site Model (CSM) has been developed to define the scope and extent of investigation works deemed necessary, prior to commencing with any future developments. A site reconnaissance (walkover) survey was undertaken as part of this report which involved an inspection of the site and its vicinity. Site photographs were taken during the survey, and these can be seen attached in Appendix I, with all relevant observations noted in Section 2.1.

2.0 Physical Setting

2.1 Site Details: -

Table 2.1

Site Name & Address:	473 – 475 Oldham Road, Rochdale, OL16 4TD.
National Grid Reference:	390460, 411760 – representative for the centre of the site.
Description of Location:	The site is located within a semi-industrial / residential setting, situated south off the A664, c.1km to the southeast of Rochdale City Centre and c.9km to the east of Bury.
Site Boundaries:	N = Rochdale Scout Group & fast-food restaurants, with rear of Watkin Street beyond, E = Watkin Street, with Clarendon Street beyond, S = Public house (The Plough Inn), with Argyle Street beyond, W = Oldham Road, with Burlington Street beyond.
Site Shape & Area:	The site is roughly square in shape and occupies an approximate area of c.0.14 Hectares.
Proposed Development Details:	Proposals have been made to redevelop the site with two new retail units (1,050sq. ft & 4,000sq.ft) and associated carparking, with a small, landscaped area adjacent to Oldham Road.
General Topography:	No topographical survey was available at the time of writing this report. BGS maps indicate that the site is generally level, at c.139m AOD, with a slight incline towards the north-eastern portion, where it is recorded as c.140m AOD. Site reconnaissance confirms this, with a very slight incline towards the east – northeast.
Site surfacing:	The site consists of asphalt / concrete / paving slabs, with patchy surfacing areas (infilling), including a range of mixed shrubbery around the site. There is a service cover, with metal fencing visible to the western boundary. A brick-built wall to a height of a c.2m, with a metal fence above along the eastern boundary, with the north and south boundaries adjacent to neighbouring dwellings.
Above Ground Structures:	There are no building structures on the site, however the boundary wall to the east appears to be a retaining wall for Watkin Street beyond, as the street is higher than Oldham Road. There is also a relic metal pipe insitu upon the northwest portion of the site, believed to be connected to UST's / former UST's.
Below Ground Structures:	A drain is present across the entrance / exit portions along the western border of the site. Storage fuel tanks (petroleum / diesel) and associated piping may be situated below the site, corresponding with historical use (garage), with services (i.e., drains, water, electric, gas, etc.) likely to be present associated with historical and current off-site buildings.

3.0 Environmental Setting

3.1 Site Geology: -

The geological assessment for this site has been based on records produced by the British Geological Survey (BGS). The following documents have been reviewed.

- BGS Sheet 85, Manchester, Solid and Drift, 1:50 000 scale, 2011
- BGS Boreholes SD91SW/123 & SD91SW/102

3.0 Environmental Setting (Cont'd)

3.1 Site Geology (Cont'd): -

- Envirocheck Report (297493381_1_1)
- GeolIndex Onshore Online Interactive Map Viewer
- Coal Authority Online Interactive Map Viewer
- Coal Consultants Coal Mining Report; 51003214052001

3.1.1 Made Ground: -

According to published BGS maps the site is not recorded to be underlain by a significant thickness of made ground deposits, however made ground is expected across most of the site from previous historical structures. Published historical Ordnance Survey (OS) maps show the site to have been a previous garage, with features indicating a former forecourt with fuel pumps. Therefore, deep made ground is anticipated to be present on the central / western portion of the site associated with a historically recorded garage and possible underground storage tanks (UST's), with associated pipework and vents. Any made ground is likely to comprise disturbed natural strata, with anthropogenic debris (i.e., brick, concrete etc), with possible contaminated hotspot areas.

3.1.2 Superficial Deposits: -

Published BGS maps indicate the site is underlain by Hummocky (moundy), glacial deposits, comprising of rock debris, clayey till, with poorly to well layered sand and gravels, which is characterised to have a moundy topographic feature. A BGS borehole (SD91SW/123), c.210m to the south / southwest of the site records medium dense silty sand and clays from c.1.25m to a depth of c.8.00m bgl, with stiff to firm laminated silty clay, with gravel bands to a depth c.11.60m bgl, recorded to be the base of the borehole log. A further BGS borehole (SD91SW/102), c.251m to the west of the site records medium dense sand and gravels with occasional cobbles to a depth of c.8.70m bgl, with medium dense fine to medium sand from c.8.70m bgl to the base of the borehole record at c.12.00m bgl.

3.1.3 Solid Geology: -

In accordance with the published BGS maps and Envirocheck report, the solid geology underlying the site is recorded to be Old Lawrence Rock, a sandstone sedimentary bedrock (part of the Pennine Lower Coal Measures Formation) (PLCM), formed during the Carboniferous Period, comprising of grey – green, fine-grained sandstone (Old Lawrence Rock), with interbedded grey mudstone, siltstone, pale grey sandstones, with productive coal seams (PLCM) below.

3.2 Coal Mining Risk Assessment & Mineral Extraction: -

Published BGS maps indicate the site is underlain by Old Lawrence Rock with the Pennine Lower Coal Measures Formation, containing productive coal seams below.

In accordance with the Coal Authority (CA – interactive map viewer), the site is recorded to lie within a 'Coal Mining Reporting Area', however does not lie within a defined 'Development High Risk Area' (DHRA), or an area of 'Past / Probable Shallow Coal Workings' and there are no shafts or adits within proximity to the site.

To assist with this coal mining risk assessment (CMRA) a Consultants Coal Mining Report (reference 51003214052001) has been obtained from the CA for this site, and a copy of which is attached in Appendix II.

3.0 Environmental Setting (Cont'd)

3.2 Coal Mining Risk Assessment & Mineral Extraction (Cont'd): -

From information included within the Coal Mining Report there are no past underground mining recorded, no probable unrecorded shallow workings, no spine roadways recorded at shallow depth, no mine entries within c.100m of the site boundary, no outcrops, geological faults, fissures or breaklines recorded and no opencast mines recorded within c.500m of the site.

Therefore, the site is not thought to be at risk from potential future surface stability issues that can arise from shallow coal mining activities. As such no further assessment or intrusive works are required with regards this potential geohazard.

In accordance with the new CL:AIRE guidance 'Good practice for Risk Assessment for Coal Gas Emissions (October 2021), Figure 13.1: Decision support tool for mine gas risk assessment there is a negligible risk from hazardous ground gases at this site therefore no further assessment or monitoring will be required.

There are two recorded historical sand / gravel pits within proximity of the site, c.10m to the southeast and c.210m to the northwest of the site, both sites showing date of mapping as c.1989.

3.3 Potential Geological Hazards: -

Table 3.1

Potential Geological Hazard:	Comments
Land Slip:	Very low risk.
Shrinkable Soils:	low risk.
Collapsible Soils:	Very low risk.
Compressible Soils:	No hazard.
Running Sand:	Very low risk.
Dissolution:	No hazard.

3.4 Site Hydrogeology: -

- The site is not located in or within c.1km of a Source Protection Zone (SPZ).

Table 3.2

STRATA	Aquifer / Soil Leachability EA Classification	Comments
Groundwater Vulnerability:	Productive Bedrock Aquifer & Productive Superficial Aquifer - Soluble rock risk - None	High Vulnerability – Combined (High pollutant speed), dilution >550mm/year. Well-connected Fractures, superficial thickness >10mm, high superficial recharge.
Superficial Deposits: (Hummocky – Glacial Deposits)	Secondary Aquifer - A	Principal and secondary aquifers provide significant quantities of drinking water, and water for business needs. They may also support rivers, lakes, and wetlands.
Solid Geology: (Old Lawrence Rock & Pennine Lower Coal Measures Formation)	Secondary Aquifer – A	Principal and secondary aquifers provide significant quantities of drinking water, and water for business needs. They may also support rivers, lakes, and wetlands.

3.0 Environmental Setting (Cont'd)

3.5 Site Hydrology: -

- There are two Water Abstractions recorded within c.250m of the site, both correspond to the same site, Dunphy Oil & Gas Burners / Dunphy Combustion Ltd (licence -2569002178), c.242m to the west of the site (permit start date 27/03/1981 & 12/02/1991), groundwater source - surface.
- There is one surface water feature within c.250m of the site, situated c.76m to the southwest of the site, corresponding with an inland river (Sudden Brook), GQA Grade - B.

Table 3.3

<u>SURFACE WATER FEATURE</u>	<u>Location</u>	<u>Comments</u>
GQA Classified River:	One recorded within c.250m.	EC Ref. 32 – 35, corresponds to one river feature (Sudden Brook), c.77m to c.217m to the southwest / south of the site, GQA Grade – B.
Unclassified Watercourse(s), Canals, Ponds & Lakes:	None recorded within c.250m.	~
Flooding:	The site does not fall within a designated Flood Zone II or III.	Although the site does not fall within a designated Flood Zone II or III, it is recommended that further consultation with the Local Authority (LA) and Environment Agency (EA) should be made with respect to the potential for flood events in this area and to establish local knowledge of periodic flooding problems.
Surface Water Flooding (EA):	The site is shown within an area with possible low risk from surface water flooding – 1000-year return.	Surface water flooding occurs when rainwater does not drain away through the standard drainage systems or soak into the ground but lies on or flows over the ground instead. However, flooding events, considered a very low risk, may still occur.
Groundwater Flooding at Surface (BGS):	The site is recorded as being within an area of limited potential for groundwater flooding to occur	Information obtained from Landmark, indicating the potential for groundwater flooding at surface and below ground level, proposed by the British Geological Survey (BGS). This information is based on areas which may be potentially influenced by geological factors.
<u>RAINFALL</u>	<u>Measurements (mm)</u>	<u>Comments</u>
Annual	1197.22	Based on 'station average' records from Rochdale, dated from 1991 - 2020
Precipitation: Max (Dec)	138.88	
Precipitation: Min (May)	65.67	

3.6 Site Ecology: -

Table 3.4

<u>FEATURES</u>	<u>Location</u>	<u>Comments</u>
Local Nature Reserves:	None recorded within c.250m.	~
Areas of Adopted Green Belt:	None recorded within c.250m.	~
Special Protection Areas:	None recorded within c.250m.	~
Nitrate Vulnerable Zone:	None recorded within c.250m.	~
Other:	~	~

There was no visual evidence to suggest the site was affected by the presence of invasive weed species (i.e., Japanese Knotweed, Giant Hogweed or Himalayan Balsam) at the time of the site walkover survey. However, a detailed invasive weed survey has not been undertaken, therefore, site awareness during future investigation works and during the construction phase for any potential invasive weed species would be considered prudent. No ecological surveys have been completed as part of this report.

3.0 Environmental Setting (Cont'd)

3.7 Estimated Soil Chemistry: -

Data provided by the BGS in relation to estimated soil chemistry for several key metals and metalloid elements are summarised in Table 3.5 below. Note: the references to the anticipated background concentrations of contaminants, sourced from the BGS, should not be relied upon. They are not site-specific and do not represent the condition of the ground at the proposed development site.

Table 3.5

<u>Element</u>	<u>Soil Type</u>	<u>Estimated Soil Concentrations (mg/kg)</u>
Arsenic	Rural Soil	15 – 25
Cadmium	Rural Soil	<1.8
Chromium (total)	Rural Soil	90 – 120
Lead	Rural Soil	100 – 200
Nickel	Rural Soil	<30 – 45

3.8 Radon Assessment: -

The site is recorded to lie within a lower probability radon area, with less than 1% of homes estimated to be at or above the action level, in accordance with the BGS, National Geoscience Information Service, and their assessment suggests that no radon protective measures are necessary in the construction of new dwellings or extensions. This corresponds with the BRE Digest, BR211 (2007) Radon: Guidance on protective measures for new buildings, the site is situated within a clear grid square (1km), and therefore no radon protective measures are required for the site.

3.9 Correspondence with Greater Manchester Fire and Rescue Service: -

As part of this Phase 1: Desk Top Study Report, Greater Manchester Fire and Rescue Service have been contacted so that information on the status of any potential Underground Storage Tanks (UST's) could be obtained. After consultation with the Petroleum Licencing Officer, they have concluded that after reviewing their site historical files, they have not identified any evidence that petroleum spirit has been stored on this site. However, they do not hold records for the site prior to 1986, when the site was under the responsibility of the Local Authority Trading Standards. The OS historical plans show that the garage was no longer in use around c.1984 – c.1985.

Although the Greater Manchester Fire and Rescue hold no historical details for this site, anecdotal records show fuelling pumps situated to the west of the site, which would concur with evidence during site reconnaissance that show infilling of the ground in the area where probable UST's would have been stored. In addition, a vent pipe was also observed on the north-western portion of the site.

It is therefore concluded that there may be UST's still on-site, with due care and caution paramount before any future works are undertaken, with any such findings / evidence of UST's or fuels present to be reported to the Authority with immediate effect. Any work being carried out on or near to tank(s) or the tank removal, should only be carried out by people that are competent to carry out this type of work and who have the necessary skills and knowledge to take the appropriate precautions necessary to deal with potential flammable atmospheres.

A copy of the report from the Greater Manchester Fire and Rescue Service can be found in Appendix II.

4.0 Industrial Setting

4.1 Recent Site History: -

Copies of historical OS maps covering this site and adjacent land are included in Appendix III, and a summary of the site history based on these plans is provided in Table 4.1 below.

Table 4.1

Significant features / potentially contaminative uses highlighted in **bold text**.

Date	Site	Adjacent Areas
c.1851 – c.1893	From c.1851 a Methodist chapel is recorded to be on the northern boundary of the site. By c.1892 a Sunday School is recorded along the eastern boundary of the site.	From c.1851 a road is recorded adjacent to the site boundary from the west, traversing north to south, with gravel pits recorded just beyond the site boundary to the southeast and c.210m to the northwest of the site. Residential property is recorded surrounding the site from the north and west, with an inland river (Sudden Brook), c.200m and woollen mills recorded, c.400m to the northwest and field troughs recorded, c.400m to the northeast. By c.1892 the gravel pit to the south of the site is no longer recorded (infilled) and has residential housing recorded on the site, the road is recorded as a tramway and a Cart & Wagon Works is recorded, c.200m to the south, a reservoir is recorded, c.400m to the northwest and further cotton / woollen mills are recorded, c.150m – c.200m to the west - southwest of the site by c.1893.
c.1894 - 1911	By c.1910, some trees are recorded to the southwestern portion of the site.	From c.1894, reservoirs are recorded, c.400m to the southwest, adjacent to the cotton / woollen mills (Eagle Mill & Green Mill) , with some further residential and commercial developments within proximity surrounding the site. By c.1910 filter tanks / filter beds are also recorded within proximity of the mills to the west and northwest, however no longer recorded by c.1911 (infilled) and the gravel pit to the northwest is now recorded as a sand pit .
c.1930 – c.1968	By c.1956 the Sunday School on site is no longer recorded, however the Methodist chapel has been extended to cover the area of the Sunday school and now called Lowerplace Methodist Church . By c.1967 the trees are no longer recorded.	From c.1930, bowling greens are recorded, c.150m to the southeast, tennis grounds are recorded, c.200m to the south – southwest and field springs are now recorded to the east of the site (former field troughs). By c.1931 the tramway is recorded as a road (Oldham Road). By c.1956 The tennis grounds are recorded as playing fields and one of the reservoirs to the west is recorded as ' old ' reservoir (infilled) . There is also a Pavilion recorded within the bowling ground to the southeast and a Public House (Pub) , is now recorded to the southern boundary of the site. By c.1968 another further reservoir to the southwest is recorded as disused (infilled) .
c.1973 – c.1988	From c.1973 a garage is recorded centrally on the site, with what appears to be two smaller structures along the western boundary (possible fuel pumps)	From c.1973 a Telephone Engineering Centre is recorded, c.200m to the west of the site, adjacent to the cotton and woollen mills . Residential and community properties continue to expand surrounding the site. The Green Mill (woollen) to the west is no longer recorded (disused), with a Scout Hall now recorded adjacent to the north-eastern portion of the site. The Cart & Wagon Works are now recorded as a works , the sand pit to the northwest and field springs to the east are no longer recorded (infilled). By c.1984 the Eagle Mill (cotton) is no longer recorded (demolished), however by c.1988 a depot is recorded on the former site, with a works recorded c.120m to the west of the site.
c.1992 – 2022 (present day)	By c.1993 the garage and former fuel pumps are no longer recorded (demolished) and remain undeveloped until present day.	By c.1992, the Scouts Hall is recorded as a hall. By c.1996 the former Eagle Cotton Mill site is now recorded as Eagle Technology Park . From c.1999 the works to the southeast of the site is no longer recorded (demolished). Residential and community properties continue to expand surrounding the site until present day.

4.2 Landfill & Waste: -

The following information relating to Landfill and Waste has been obtained from Landmark Information Group, the Environment Agency and walkover survey completed.

4.0 Industrial Setting (Cont'd)

4.2 Landfill & Waste (Cont'd): -

- There are no BGS Recorded Landfill Sites, Historical Landfill Sites, Licensed Waste Management Facilities, Local authority recorded landfill sites, Registered Landfill Sites, Registered Waste Transfer sites or Registered Waste Treatment or Disposal Sites within c.250m of the site.
- There are two areas of potentially infilled land (non-water) recorded within c.250m, situated c.9m to the southeast of the site (EC Ref. 102 – Infilled gravel pit) and c.209m to the northwest of the site (EC Ref. 103 – Infilled sand pit), date of mapping 1989.
- There are two areas of potentially infilled land (water) recorded within c.250m, situated c.163m to the northwest of the site (EC Ref. 108 – Infilled reservoir / filter beds) and c.241m to the southeast (EC Ref. 109 – Potentially culverted inland river (Sudden Brook), date of mapping 1894.
- The site is recorded to have been a historical garage with probable UST's (fuelling station).
- Deep infilled land associated with previous land uses.

Following a review of OS maps and other site-specific data, the site is at risk from Hazardous Ground Gas migration associated with on-site (former garage, with UST) and off-site sources. It is recommended that a programme of ground gas monitoring is undertaken, as part of any intrusive investigation works in accordance with CIRIA 665 and BS8485:2015+A1:2019.

4.3 Unexploded Ordnance (UXO) Risk: -

According to the Unexploded Bomb Risk Map produced by ZeticaUXO, the site lies within a low-risk area in terms of unexploded ordnance (areas indicated as having 15 bombs per 1000 acre or less). Given the nature of the proposed development, it is felt that a Detailed UXO Risk Assessment is not required. A copy of the ZeticaUXO Unexploded Bomb Risk Map can be seen attached in Appendix III.

4.4 Statutory Requirements / Authorisations: -

Table 4.2

Type	Location	Comments
Pollution Prevention and Controls	One recorded within c.250m.	EC Ref. 6, corresponding to Shell Eagle Service Station, c.239m to the northwest of the site – Authorised – Permit Ref. 91/09.
Registered Radioactive Substances	None recorded within c.250m.	~
Prosecutions Relating to Authorised Processes	None recorded within c.250m.	~
Enforcement and Prohibition Notices	None recorded within c.250m.	~
Planning Hazardous Substances Consents / Enforcements	None recorded within c.250m.	~
COMAH / NIHHS Sites	None recorded within c.250m.	~
Contemporary Trade Entries	Sixteen recorded within c.250m.	EC Ref. 145 - 153 – Eight active entries, c.8m to c.249m from the site, corresponding to The Wandrus Store (hardware), Shepherd Printers (printers), Fishers Cleaning Services (commercial cleaning), Rochdale Royale (catering equipment), Stampede Cleaning (cleaning services), Autocare Rochdale Ltd (MOT testing centre), Decidebloom (car dealers) & Stoneacre Rochdale (car dealers). Eight inactive entries.
Fuel Station Entries	None recorded within c.250m.	~

4.0 Industrial Setting (Cont'd)

4.5 Pollution Incidents and Discharge Consents: -

Table 4.3

Type	Location	Comments
Discharge Consents	None recorded within c.250m.	~
Water Industry Act Referrals	None recorded within c.250m.	~
Prosecutions Relating to Controlled Waters	None recorded within c.250m.	~
Pollution Incidents to Controlled Waters	None recorded within c.250m.	~
Substantiated Pollution Incident Register	None recorded within c.250m.	~

5.0 Preliminary Risk Assessment Summary

5.1 Preliminary Conceptual Site Model (CSM): -

The Conceptual Site Model (CSM) is one of the primary planning tools that can be used to support the decision-making process of managing contaminated land and groundwater on any given site and allows a better understanding of what needs to be done to achieve risk management, and from this appropriate remediation techniques, if required for those risk management goals can be chosen.

This can be done by undertaking a *source-pathway-receptor* analysis of the site. The anticipated sources, pathways and receptors for this site are summarised in Table 5.1 below and are a graphical representation of the preliminary CSM has been produced for this site and is attached in Appendix IV.

Table 5.1

* = Not included in the Human Health & Controlled Waters Risk Assessment

	Sources (S)		Pathways (P)		Receptors (R)
S1	Made ground associated with the historical development of the site and surrounding areas.	P1	Ingestion & Dermal Contact.	R1	Human health – Future end users.
		P2	Air – Inhalation of vapours (indoor & outdoors) and contact with dust.	R2	Controlled Waters: Groundwater within the underlying solid geology (Identified as a Secondary A – Aquifer) and within the superficial geology (Secondary A - Aquifer). Surface water feature: c.76m to the southwest of the site, corresponding with an inland river (Sudden Brook), GQA Grade - B.
S2	Possible on-site / off-site sources of hazardous ground gases (made ground, infilled land and former garage (UST's)).	P3	Plant uptake and attached soils.		
		P4	Migration through existing services.	R3	
S3	Possible localised contamination associated with the former on-site garage (UST's - fuels, oils, asbestos & solvents)	P5	Direct contact with building materials.	R4	Adjacent sites.
		P6	Surface run off & Infiltration.	R5	Flora and fauna*.

5.2 Geotechnical Considerations: -

The following potential geotechnical issues and hazards have been identified for this site, and these issues should be considered before future development of the site is to take place:

5.0 Preliminary Risk Assessment Summary (Cont'd)

5.2 Geotechnical Considerations (Cont'd): -

- Difference in ground levels between the existing boundary wall to the east and adjacent road.
- Thickness, type, variability and condition of made ground deposits present across the site. There is the potential for significant depths of made ground (>3m) to be present associated with the removal of the former UST's.
- Geotechnical parameters of the natural deposits (superficial and solid geology) underlying the site and depth to suitable load bearing founding strata, particularly with respect to the design of foundations and hardstanding areas (car parking).
- Possible relic foundations / buried structures below the site, (i.e., building foundations, tanks, ducts etc).
- Potential presence of buried services below the site, (i.e., water, electricity etc.).
- Control of surface water drainage.
- Stability of excavations within any natural granular deposits and made ground present.
- Chemical attack on buried concrete (pH and sulphate testing).

To determine the geotechnical considerations above with more certainty, it is recommended that a programme of intrusive geotechnical investigation works is undertaken on this site with associated in-situ geotechnical testing, to aid in assessing the extent of any potential issues prior to commencing with any development in the future.

The information reviewed indicates that the site can be considered as being located within a
LOW to MODERATE geotechnical risk setting.

5.3 Sources of Contamination and Probable Contaminants: -

The historical Ordnance Survey maps, Landmark Envirocheck Report and other environmental information reviewed indicates that the site was recorded as a Methodist chapel / church / Sunday School (with trees recorded from c.1910 – c.1967); from c.1851 until c.1973, when it was recorded as a garage (with on-site fuelling pumps) until c.1993. From c.1993 the site has remained undeveloped until present day. As a result, ground contamination testing will need to be incorporated into the design of any intrusive investigation works to confirm the level of risk from on-site contamination (ground level and UST's)

In addition, laboratory testing should also be undertaken on representative samples taken from site for naturally aggressive chemicals which could have a detrimental effect on building materials (i.e., pH value and soluble sulphate).

Consideration should also be given to the protection of any new service pipes for the proposed development, and a suite of contamination testing (UKWIR suite) may be required in order to meet the requirements of the local utilities service provider for their 'pipe selection risk assessment' (PSRA), once the location and depth of future services have been determined.

5.3.1 Soils – Human Health:

In consideration of the above, if made ground is recorded during any future intrusive investigation / construction works, it would be prudent to test selected samples of soil from this site for the following analytes below:

5.0 Preliminary Risk Assessment Summary (Cont'd)

5.3 Sources of Contamination and Probable Contaminants (Cont'd): -

5.3.1 Soils – Human Health (Cont'd):

- Generic contamination suite, typically comprising; Arsenic, Cadmium, Chromium, Copper, Lead, Mercury, Nickel, Selenium, Zinc, Total Organic Carbon, (TOC) and pH.
- Asbestos screening (and quantification if encountered)
- Speciated Polyaromatic Hydrocarbons (PAHs) and Total Petroleum Hydrocarbons (TPHs & BTEX) should be undertaken if there is any visual or olfactory evidence of fuels/oils or other wastes, e.g., ash present in the ground.
- Screening for solvents (VOC / SVOC) & PCB's, if suspected.

Waste Acceptance Criteria (WAC) testing may be required to aid in off-site disposal classification of waste soils.

The information reviewed indicates that the site can be considered as being located within a **MODERATE to HIGH** ground contamination risk setting for Human Health.

5.3.2 Groundwater / Leachate – Controlled Waters: -

The following factors have been taken into consideration when assessing the risks posed towards Controlled Waters:

- Historically significant contaminative land uses on-site (former garage, with associated fuelling pumps – UST's)
- The site is not recorded as being in or within c.1km of a Source Protection Zone (SPZ).
- There are two Water Abstractions recorded within c.250m of the site, c.242m to the to the west of the site, groundwater source - surface.
- There is one surface water feature within c.250m of the site, situated c.76m to the southwest of the site, corresponding with an inland river (Sudden Brook), GQA Grade - B.
- The solid geology on site is a Secondary Aquifer – A
- The superficial aquifer designation on site is Secondary Aquifer – A.

Depending on the results of any soil contamination screening, leachate / water screening may be required on selected samples, if necessary, to determine the risk to Controlled Waters (i.e., groundwater). Similarly, this work should be incorporated within the design of any intrusive ground investigation works.

The information reviewed indicates that the site can be considered as being located within a **MODERATE** ground contamination risk setting for Controlled Waters.

6.0 Recommendations for Phase 2 Intrusive Investigation Works

The conclusions contained within this report have been based on a review of geological plans, historical plans and available environmental data relating to the site and nearby adjacent land and forms the basis of a preliminary risk assessment. The primary benefits of undertaking this report are as follows:

6.0 Recommendations for Phase 2 Intrusive Investigation Works (Cont'd)

- (i) Identify the geotechnical and/or geo-environmental characteristics of the ground in sufficient detail to quantify the groundwater flood risk at the site and for the economic design of any future site / proposed development, construction or associated remedial works.
- (ii) Minimise the risk of unforeseen ground conditions which might cause increased costs and / or programme (construction) delays later.

Therefore, it is recommended that a programme of Phase 2: Ground Investigation (intrusive investigation) works are completed for this site to provide an assessment of the geo-environmental characteristics of the site. These intrusive investigation works should be completed prior to commencing with any future development works and should include for the following or a similar scope of investigation works:

- Undertake a series of exploratory boreholes within proximity of the former fuelling pumps to determine extent of potential ground contamination corresponding with historical land uses.
- A series of trial pits to check for relic buried structures / UST's.
- A series of boreholes, including in-situ geotechnical testing and sampling targeting the proposed development areas to aid with future foundation and hardstanding designs.
- Installation of combined ground gas & groundwater monitoring wells accompanied by an appropriate number of monitoring visits (in accordance with CIRIA C665 & BS8485), in order to determine the ground gas and groundwater regime below the site.
- Appropriate laboratory geotechnical testing on the samples recovered from the site, including chemical testing for concrete classification.
- Completion of insitu variable (falling) head permeability tests to determine the suitability of SUDS drainage system.
- Appropriate laboratory contamination screening on samples recovered from the investigation to assess the risks to Human Health and Controlled Waters. As highlighted in section 5.3.
- Site supervision and production of RAMS and production of interpretive Phase 2: Ground Investigation Report, including a Ground Contamination Risk Assessment.

Prior to site investigation works commencing on site, all existing utilities / services should be identified and recorded, such that any potential damage to services crossing the site can be prevented, as well as ensuring the health and safety of future site workers.

Approximate position of property

Reproduced by permission of Ordnance Survey on behalf of HMSO. © Crown copyright and database right 2018. All rights reserved.

Ordnance Survey Licence number: 100020315

Section 1 – Mining activity and geology

Past underground mining

No past mining recorded.

Probable unrecorded shallow workings

None.

Spine roadways at shallow depth

No spine roadway recorded at shallow depth.

Mine entries

None recorded within 100 metres of the enquiry boundary.

Abandoned mine plan catalogue numbers

None available.

Outcrops

No outcrops recorded.

Geological faults, fissures and breaklines

No faults, fissures or breaklines recorded.

Opencast mines

None recorded within 500 metres of the enquiry boundary.

Coal Authority managed tips

None recorded within 500 metres of the enquiry boundary.

Section 2 – Investigative or remedial activity

Please refer to the 'Summary of findings' map (on separate sheet) for details of any activity within the area of the site boundary.

Site investigations

None recorded within 50 metres of the enquiry boundary.

Remediated sites

None recorded within 50 metres of the enquiry boundary.

Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

Mine gas

None recorded within 500 metres of the enquiry boundary.

Mine water treatment schemes

None recorded within 500 metres of the enquiry boundary.

Section 3 – Licensing and future mining activity

Future underground mining

None recorded.

Coal mining licensing

None recorded within 200 metres of the enquiry boundary.

Court orders

None recorded.

Section 46 notices

No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

Withdrawal of support notices

The property is not in an area where a notice to withdraw support has been given.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

Payments to owners of former copyhold land

The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Section 4 – Further information

Based on the responses in this report, no further information has been highlighted.

Section 5 – Data definitions

The datasets used in this report have limitations and assumptions within their results. For more guidance on the data and the results specific to the enquiry boundary, please **call us on 0345 762 6848** or **email us at groundstability@coal.gov.uk**.

Past underground coal mining

Details of all recorded underground mining relative to the enquiry boundary. Only past underground workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination, will be included.

Probable unrecorded shallow workings

Areas where the Coal Authority believes there to be unrecorded coal workings that exist at or close to the surface (less than 30 metres deep).

Spine roadways at shallow depth

Connecting roadways either, working to working, or, surface to working, both in-seam and cross measures that exist at or close to the surface (less than 30 metres deep), either within or within 10 metres of the enquiry boundary.

Mine entries

Details of any shaft or adit either within, or within 100 metres of the enquiry boundary including approximate location, brief treatment details where known, the mineral worked from the mine entry and conveyance details where the mine entry has previously been sold by the Authority or its predecessors British Coal or the National Coal Board.

Abandoned mine plan catalogue numbers

Plan numbers extracted from the abandoned mines catalogue containing details of coal and other mineral abandonment plans deposited via the Mines Inspectorate in accordance with the Coal Mines Regulation Act and Metalliferous Mines Regulation Act 1872. A maximum of 9 plan extents that intersect with the enquiry boundary will be included. This does not infer that the workings and/or mine entries shown on the abandonment plan will be relevant to the site/property boundary.

Outcrops

Details of seam outcrops will be included where the enquiry boundary intersects with a conjectured or actual seam outcrop location (derived by either the British Geological Survey or the Coal Authority) or intersects with a defined 50 metres buffer on the coal (dip) side of the outcrop. An indication of whether the Coal Authority believes the seam to be of sufficient thickness and/or quality to have been worked will also be included.

Geological faults, fissures and breaklines

Geological disturbances or fractures in the bedrock. Surface fault lines (British Geological Survey derived data) and fissures and breaklines (Coal Authority derived data) intersecting with the enquiry boundary will be included. In some circumstances faults, fissures or breaklines have been known to contribute to surface subsidence damage as a consequence of underground coal mining.

Opencast mines

Opencast coal sites from which coal has been removed in the past by opencast (surface) methods and where the enquiry boundary is within 500 metres of either the licence area, site boundary, excavation area (high wall) or coaling area.

Coal Authority managed tips

Locations of disused colliery tip sites owned and managed by the Coal Authority, located within 500 metres of the enquiry boundary.

Site investigations

Details of site investigations within 50 metres of the enquiry boundary where the Coal Authority has received information relating to coal mining risk investigation and/or remediation by third parties.

Remediated sites

Sites where the Coal Authority has undertaken remedial works either within or within 50 metres of the enquiry boundary following report of a hazard relating to coal mining under the Coal Authority's Emergency Surface Hazard Call Out procedures.

Coal mining subsidence

Details of alleged coal mining subsidence claims made since 31 October 1994 either within or within 50 metres of the enquiry boundary. Where the claim relates to the enquiry boundary confirmation of whether the claim was accepted, rejected or whether liability is still being determined will be given. Where the claim has been discharged, whether this was by repair, payment of compensation or a combination of both, the value of the claim, where known, will also be given.

Details of any current 'Stop Notice' deferring remedial works or repairs affecting the property/site, and if so the date of the notice.

Details of any request made to execute preventative works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991. If yes, whether any person withheld consent or failed to comply with any request to execute preventative works.

Mine gas

Reports of alleged mine gas emissions received by the Coal Authority, either within or within 500 metres of the enquiry boundary that subsequently required investigation and action by the Coal Authority to mitigate the effects of the mine gas emission.

Mine water treatment schemes

Locations where the Coal Authority has constructed or operates assets that remove pollutants from mine water prior to the treated mine water being discharged into the receiving water body.

These schemes are part of the UK's strategy to meet the requirements of the Water Framework Directive. Schemes fall into 2 basic categories: Remedial – mitigating the impact of existing pollution or Preventative – preventing a future pollution incident.

Mine water treatment schemes generally consist of one or more primary settlement lagoons and one or more reed beds for secondary treatment. A small number are more specialised process treatment plants.

Future underground mining

Details of all planned underground mining relative to the enquiry boundary. Only those future workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination will be included.

Coal mining licensing

Details of all licenses issued by the Coal Authority either within or within 200 metres of the enquiry boundary in relation to the under taking of surface coal mining, underground coal mining or underground coal gasification.

Court orders

Orders in respect of the working of coal under the Mines (Working Facilities and Support) Acts of 1923 and 1966 or any statutory modification or amendment thereof.

Section 46 notices

Notice of proposals relating to underground coal mining operations that have been given under section 46 of the Coal Mining Subsidence Act 1991.

Withdrawal of support notices

Published notices of entitlement to withdraw support and the date of the notice. Details of any revocation notice withdrawing the entitlement to withdraw support given under Section 41 of the Coal Industry Act 1994.

Payment to owners of former copyhold land

Relevant notices which may affect the property and any subsequent notice of retained interests in coal and coal mines, acceptance or rejection notices and whether any compensation has been paid to a claimant.

The map highlights any specific surface or subsurface features within or near to the boundary of the site.

Request for historical petroleum storage information under the Environmental Information Regulations 2004

Re Site Address: 473-475 Oldham Road, Rochdale OL16 4TD

I am writing on behalf of Greater Manchester Combined Authority (the Authority) which is the Fire Authority for Greater Manchester and the enforcing authority for the Petroleum (Consolidation) Regulations 2014 and the Dangerous Substance and Explosives Atmosphere Regulations 2002. Greater Manchester Fire and Rescue Service (GMFRS) carries out these functions on behalf of the GMCA.

The Authority has reviewed the site historical files and records for any past or current licensed storage of petroleum within the site address above. The review has not identified any evidence that petroleum spirit was stored at this site.

However, if whilst undertaking future works and at any time it becomes apparent to contractors that above or underground petroleum tanks are present, which may not have been rendered permanently safe, the Authority must be informed immediately.

Please be aware that disused petrol tanks that have been certified as having been made safe by the use of resin generated foam may still be in an unsafe condition. It has been proven that foam filled underground tanks may be dangerous if disturbed due to the foam degrading over time and the risk of ullage spaces in the tanks filling with explosive, flammable and hazardous atmospheres. Any work being carried out on or near to tank(s) or the tank removed, should only be carried out by people that are competent to carry out this type of work and who have the necessary skills and knowledge to take the appropriate precautions necessary to deal with potential flammable atmospheres.

It should also be noted that the Authority only took over responsibility for petroleum licensing in 1986. Prior to this date the licensing was carried out by the Local Authority Trading Standards. Whilst every endeavour has been made to search back, we cannot guarantee that there was no storage prior to 1986. The Authority only has responsibility for petroleum and related products that are legally required to be licensed. Any diesel tanks in the area would not have required notification, therefore no records of such tanks may be available.

Yours Faithfully,

A handwritten signature in cursive script, appearing to read 'N. Leech'.

Nicola Leech
Petroleum & Explosives Manager

Greater Manchester Fire and Rescue Service
on behalf of the Greater Manchester Combined Authority

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice
Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Envirocheck reports are compiled from 136 different sources of data.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Lancashire And Furness

Published 1893

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Additional SIMs

Published 1988

Source map scale - 1:1,250

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data Published 1992

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Lancashire And Furness

Published 1851

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Ordnance Survey Plan

Published 1956

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Manchester

Published 1975

Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use. They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2021

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

APPENDIX IV

Conceptual Site Model (CSM)

CRITICAL POLLUTANT LINKAGES

SOURCE	PATHWAY	RECEPTOR
S 1. Made ground associated with the historical development of the site and surrounding areas 2. Possible on-site / off-site sources of hazardous ground gases (made ground, infilled land and former garage (UST's) 3. Possible localised contamination associated with the former on-site garage (UST's - fuels, oils, asbestos & solvents)	P 1. Ingestion & Dermal Contact 2. Air - Inhalation of vapours (indoor & outdoors) and contact with dust 3. Plant uptake and attached soils 4. Migration through existing services 5. Direct contact with building materials 6. Surface run off & Infiltration	R 1. Human health - Future end users. 2. Controlled Waters: Groundwater within the underlying solid geology (Identified as a Secondary A - Aquifer and within the superficial geology (Secondary A - Aquifer). Surface water feature: c.76m to the southwest of the site, corresponding with an inland river (Sudden Brook), GQA Grade - B 3. Building materials & protection of water pipes* 4. Adjacent sites 5. Flora and fauna* - <i>not applicable for proposed development</i>

Indicative section through site using a WEST to EAST orientation

P6 Infiltration of rainfall limited due to extensive hardcover surfacing with limited areas of bare ground. Surface runoff to be controlled by existing surface drainage infrastructure

Low to negligible risk posed to end users of consumption of future home grown produce impacted by contaminants within the made ground when considering the previous and proposed commercial end use

STRATA DETAILS

MADE GROUND:

According to published BGS maps the site is not recorded to be underlain by a significant thickness of made ground deposits, however made ground is expected from previous historical structures. Published historical Ordnance Survey (OS) maps show the site to have been a previous garage, with features indicating a former forecourt with fuel pumps. Therefore, deep made ground is anticipated to be present on the central / western portion of the site associated with a historically recorded garage and possible underground storage tanks (UST), with associated pipework and vents. Any made ground is likely to comprise disturbed natural strata, with anthropogenic debris (i.e., brick, concrete etc), with possible contaminated hotspot areas

See
section

DRIFT DEPOSITS:

Published BGS maps indicate the site is underlain by Hummocky (moundy), glacial deposits, comprising of rock debris, clayey till, with poorly to well layered sand and gravels, which is characterised to have a moundy topographic features. A BGS borehole (SD91SW/123), c.210m to the south / southwest of the site records medium dense silty sand and clays from c.1.25m to a depth of c.8.00m bgl, with stiff to firm laminated silty clay, with gravel bands to a depth c.11.60m bgl, recorded to be the base of the borehole log. A further BGS borehole (SD91SW/102), c.251m to the west of the site records medium dense sand and gravels with occasional cobbles to a depth of c.8.70m bgl, with medium dense fine to medium sand from c.8.70m bgl to the base of the borehole record at c.12.00m bgl

SOLID GEOLOGY:

In accordance with the published BGS maps and Envirocheck report, the solid geology underlying the site is recorded to be Old Lawrence Rock, a sandstone sedimentary bedrock (part of the Pennine Lower Coal Measures Formation) (PLCM), formed during the Carboniferous Period, comprising of grey - green, fine-grained sandstone (Old Lawrence Rock), with interbedded grey mudstone, siltstone, pale grey sandstones, and coal seams (PLCM) below
