

Application to Listed Planning Authority for change to Grade 1 Listing at Rochdale Town Hall

Technical Description of Materials

Artwork Hanging Solution

Material & Finish: Anodised aluminium extrusion that will be powder coated in the RAL colours to match existing wall colours.

Dimensions: 12mm width x 25mm vertical height. Sold in 2.5m lengths. As much as possible, the track will run continuously along the wall, over doors and openings, to maintain a clean visual line that will blend with the building. If the track does not end at a wall, Absolute will supply end caps to provide a clean finish.

Installation: Pre-drilled at 300mm centres and easy to cut on site. The company recommend mitring inside and outside corners with a chop saw.

Weight loading: The standard fixing (300mm) will support artworks up to 150kgs when hung on two suspended supports

Hanging mechanism: Stainless steel cables will be used to hang the artworks and a pair of cables will support artworks up to 60kg. The top blocks that attach the hanging component to the track cannot be powder coated as they need to be moved easily in the track. There is an opening every 2.4m to insert the top blocks into the track.

Artwork connectors: The chosen artwork connectors are flexible according to the type of artwork frame conditions and security requirements. These are not visible to the public, as they will be behind the artwork.
