ERADICATION**

Date	3 rd December 2025
Inspected by	G Andrews CSJK
Checked by	S Ball
Authorised by	G Andrews CSJK
Project	Trow's Farm, Cowm Top, Castleton
Report number	IWMP2741B

LIMITATIONS

Knotweed Eradication has prepared this report with reasonable skill, care and diligence taking account of the contract terms & conditions, manpower and resources devoted to it in agreement with the client. Knotweed Eradication disclaims any responsibility to the client and others in respect of any matters outside the scope of the above.

This report has been prepared based on the information received during the timescale available and all potential contamination; constraints or liabilities associated with the site may not necessarily have been revealed. The report is only valid when it is used in its entirety.

This report is confidential to the client and Knotweed Eradication accepts no responsibility to third parties to whom the report, or any part thereof, is made known. Any such party using any information contained within the report does so at their own risk.

Site Inspection at Trow's Farm, Cowm Top, Castleton

As a division of Helmrig Ltd, Knotweed Eradication has been involved in the management and treatment of invasive non-native species (INNS) since 2004, utilising their knowledge and experience to provide clients with information and advice as to how best to deal with invasive weed issues on land within their ownership.

In October 2025 Knotweed Eradication was commissioned to undertake an inspection of the land at Trow's Farm, Cowm Top, Castleton.

The purpose of the inspection was to identify any invasive non-native species that may be present within the boundary of the site or the immediate surrounding area in accordance with the Wildlife and Countryside Act 1981 (as amended), report the findings and propose a solution to any infestations found to be present.

The main species being inspected for are Japanese knotweed, Giant Hogweed and Himalayan balsam however there are numerous other species that although don't appear on the schedule nine list are problematic for developers and will therefore be included.

This report sets out the expected treatment of each species identified prior to, during and following completion of the development phase of the works.

13. Warranty Period
14. Guarantee

“The complete solution to invasive weed control that embraces the legal and statutory requirements to effectively deal with the problems and prevent costly prosecution”

1. Site Findings and Requirements

- 1.1.** The site consists of a large area of former agricultural grazing land with pockets of mature vegetation that have been cleared. The site is due to be developed into residential dwellings comprising associated macadam roadways, plots and areas of public open green space.
- 1.2.** Surrounding areas comprise of Cripple Gate Lane and commercial properties to the north, wooded area and the A627M motorway to the east, further areas of woodland with fishery ponds to the south and residential properties and an area of woodland to the west.
- 1.3.** The site was inspected on 17th September 2025 during the late growing season with two areas of visible Japanese knotweed being identified within the site together with significant areas of Himalayan balsam.
- 1.4.** Visible knotweed was identified within the strip of land adjacent the access road with two separate small stands of mature stems – one adjacent the roadway and the other adjacent the site boundary with the public footpath leading to the woodland to the northwest of the site.
- 1.5.** Himalayan balsam was visible in various areas on site although the most significant areas were the extensive areas contained in the eastern section of site particularly towards the southern boundary.
- 1.6.** Due to the locations of the knotweed and balsam within the site it is expected that an in-situ herbicide application programme can be undertaken to prevent the spread of the infestation, but a supervised excavation of the entire plant system will be required prior to the commencement of any development works. Knotweed from JK Area 1 will be disposed of off-site at licensed landfill. Balsam material will be stockpiled in a managed deposition area to prevent cross-contamination and will then either be disposed off-site at licenced landfill or buried on site within an area of public open green space.

Excavation and movement of areas of knotweed and balsam that fall within development curtilage will be carried out prior to earthworks in those areas to avoid cross-contamination i.e. further spread of plants.
- 1.7.** Herbicide treatments will consist of targeted foliar applications of Ministry-Approved Pesticide Product (MAPP) herbicide with chemical selection being made. Whilst every effort will be made to retain as much desirable vegetation as possible no responsibility can be taken for any loss or damage.
- 1.8.** No other invasive species were noted to be present within the site boundary at this time.
- 1.9.** It is worthy of note at this point that in Japanese knotweed infested areas the root/rhizome system can grow seven metres outwards from the visible plant (although this is unlikely and a three-metre buffer zone is appropriate) and more than three metres deep if ground conditions allow e.g. made ground. If the soils are dispersed on site re-infestation is likely to occur.
- 1.10.** Please note soil material will continue to be classed as **‘Japanese knotweed contaminated’** even after completion of the Japanese knotweed treatment programme and should be dealt with as if still live. This means that any development works will require the affected area to be dealt with accordingly, which will involve the excavation of the knotweed until there are no more roots present and either buried on site at depth or removed from site. If removed from site this must be done in accordance with current waste regulations by a licensed carrier to an appropriate receiving facility. Any unauthorised disturbance of treatment areas will invalidate any warranties and guarantees offered.
- 1.11.** This management plan provides background information relating to the invasive non-native plant species identified and sets out an appropriate programme of works for effectively dealing with the species.

2. Site Map – Produced by The Environment Partnership (TEP)

3. Site Map

- Site Boundary
- Rhizome Buffer Zone
- Japanese knotweed within site
- Japanese knotweed beyond site
- Japanese knotweed beyond site not to be treated
- Himalayan balsam
- Giant Hogweed
- Other as identified within report

5. RICS - Royal Institute of Chartered Surveyors

Japanese knotweed Risk Categories Framework (Introduced 23.3.22)

The new assessment framework is not only for use when valuers report to lenders but it is also intended to support the decision-making process across the range of inspection and surveys carried out by a Royal Institute of Chartered Surveyors (RICS) members. It also enables the valuer or surveyor to carry out a structured assessment that leads to an objective categorisation of any given infestation. Knotweed Eradication's knotweed surveyors are PCA-qualified (Property Care Association) surveyors – Certified Surveyors of Japanese Knotweed but are not RICS members.

The RICS Management Category assessment framework is intended to provide guidance but should not be regarded as definitive. The valuer or surveyor must use their professional judgement when faced with circumstances that do not fit neatly into the framework and apply whichever Management category they consider appropriate so there is an element of subjectivity to this.

6. Proposed Method of Treatment

Having considered all aspects of integrated vegetation management Knotweed Eradication will utilise a combination of excavation and removal of INNS from within development footprint with either off-site disposal or on-site burial (commercial decisions to be taken for what is appropriate) plus an 'in-situ' treatment programme that will comprise the targeted application of appropriate herbicide together with mechanical processes. A selection of the following MAPP products on the affected areas. Chemical selection will be made based on location of treatment area surrounding environmental factors such as adjacent watercourse, desirable vegetation, neighbouring residential dwellings etc.

Product	Mapp	Areas of Use
Roundup Pro Vantage	15534	Hard surfaces, amenity vegetation, forestry, in or near water, stem injection.
Garlon Ultra (under Stewardship)	16211	Industrial sites, motorway embankments, rail embankments, cemeteries, grass land of no agricultural interests.
Icade (under stewardship)	19069	Industrial sites, motorway embankments, rail embankments, central reservations, power stations.

7. Methodology

- 7.1. Following discussion with site management and once the site becomes active, warning signs or fencing will be erected to identify infestations to other site personnel. Additionally, contractors working on site should be briefed by site management to familiarise them with the appearance of the plant and the consequences of not dealing with it correctly. Professional advice should be sought if other possible infestations are noted on site.
- 7.2. Unauthorised access disturbance or removal of contaminated material will be prevented.
- 7.3. Restrictions regarding access to the infested areas and any applicable restrictions regarding movement of plant and vehicles should be communicated to all on-site personnel.
- 7.4. Vehicles, equipment and footwear should be inspected and cleaned prior to exiting contaminated areas.
- 7.5. Should access to the area be required during the treatment period, advice should be sought prior to entering.
- 7.6. Excavation of the affected area will be carried out by the remediation contractor / groundworkers under the direct supervision of a Knotweed Eradication supervisor. The areas will be excavated until there are no visible rhizomes present. Buckets will be half filled and emptied in a controlled manner. The wagon will exit the area carefully once all equipment has been cleaned and inspected to ensure no cross-contamination incidents occur.
- 7.7. Following excavation monitoring visits will be carried out to assess for regrowth. Any herbicide selection (if required) will be dependent on each area taking into consideration surrounding desirable vegetation and environmental considerations.

PLEASE NOTE: Task and site-specific method/risk and COSHH assessments should be carried out for each specific task being undertaken. When filed in conjunction with this management plan they will form a record of actions taken and locations of treated Japanese knotweed for future users

8. Programmed Work

- 7.1** Treatment of invasive weed infestations is to be undertaken for a minimum period of three years to effectively deal with the species although depending on the situation this may take considerably longer. A detailed schedule of works and annual treatment and monitoring programme is given below in the table.
- 7.2** Under the supervision of a suitably experienced operative, knotweed is to be excavated, in a controlled manner, placed directly on to wagon and removed from site to a licensed landfill facility.
- 7.3** Wagons are to be parked in designated loading positions during loading. Excavation will utilise half bucket full to ensure no spillage of material during loading with an inspection of the loading area being undertaken prior to wagons pulling away. Any spillage is to be cleared and placed into Wagon for removal from site.
- 7.4** On completion of the excavations plant and machinery will be cleaned and inspected prior to continuing other works or removal from site.
- 7.5** Please note: Timings of excavation works are based on site works and will need to be amended should this not be the case.

Site Name: Trow's Farm, Cowm Top	Job Ref: IWMP2741A	Client: Urban Regen – Barrat Homes (Manchester)
Location: Castleton, Rochdale	Description	
Nov/Dec 2025	Demarcation of Japanese knotweed area.

April – Oct 2030	Monitoring of known areas within treatment zone. Herbicide treatment of Japanese knotweed & Himalayan balsam.	

9. Identifying invasive non-native plants – Japanese knotweed

www.nonnativespecies.org

Produced by Olaf Booy, Max Wade and Vicky White of RPS

Japanese Knotweed

Species Description

Scientific name: *Fallopia japonica*

AKA: Japanese Bamboo, Pysen saethwr (Welsh),

Polygonum cuspidatum, *Reynoutria japonica*

Native to: Japan, Taiwan, northern China

Habitat: Common in urban areas, particularly on waste land, railways, road sides and river banks

Tall herbaceous perennial with bamboo like stems. Often grows into dense thickets. Characteristic leaves and stems, persistence of last year's dead canes and distinctive rhizome (underground root-like stems) enables year round identification.

Introduced in the early 19th century as an ornamental plant. Now common and widespread across the UK. Spreads rapidly in the wild by natural means and as a result of spread by humans. Spread is solely by vegetative means, either fragments of rhizome or stem. Does not produce seed in the UK. Negative impacts include outcompeting native flora, contributing to river bank erosion and increasing the likelihood of flooding. Can also cause significant delays and cost to development as well as structural damage (it can grow through asphalt and some other surfaces).

Japanese Knotweed is listed under Schedule 9 to the Wildlife and Countryside Act 1981 with respect to England, Wales and Scotland. As such it is an offence to plant of otherwise cause Japanese knotweed to grow in the wild. Under the Environmental Protection Act 1990, Japanese Knotweed is classified as controlled waste.

For details of legislation go to www.nonnativespecies.org/legislation.

Key ID Features

Identification throughout the year

Similar Species

Distribution

Widespread and common across the UK. Notably extensive infestations are found in the south-west of England, south Wales and Greater London, however similarly extensive populations can also be found elsewhere.

Source: NBN Gateway. Check website for current distribution

Produced by Olaf Booy, Max Wade and Vicky White of RPS

Himalayan Balsam

Species Description

Scientific name: *Impatiens glandulifera*

AKA: Policeman's Helmet, Indian Balsam, Jac y Neidiwr (Welsh)

Native to: West and central Himalayas

Habitat: Found mostly on river banks and in damp woodland, can grow in other damp habitat

A tall, attractive, annual herb with explosive seed heads. Although easy to identify as a mature plant with its pink-purple flowers, fleshy stem and characteristic leaves, the seedlings and last year's dead stems of this annual are more difficult to spot.

Introduced as a garden plant in the early 19th century and first recorded in the wild in 1855. Often favoured by the general public for its aesthetic appeal and is still deliberately planted on occasion. Now widespread in the UK, especially along urban rivers. Spreads solely by seeds, which are small and easily carried by wind or water.

Out-competes native species in ecologically sensitive areas, particularly river banks. Where it grows in dense stands along river banks it can impede flow at times of high rainfall, increasing the likelihood of flooding. Die back of extensive stands over winter can leave river banks bare and exposed to erosion.

Himalayan balsam is listed under Schedule 9 to the Wildlife and Countryside Act 1981 with respect to England and Wales. As such, it is an offence to plant or otherwise allow this species to grow in the wild.

For details of legislation go to www.nonnativespecies.org/legislation.

Key ID Features

Identification throughout the year

Can be identified at most times of the year: March-June by its seedlings, stem and leaf shape, from July to September by its stem, leaf shape and flowers. More difficult to identify over winter (October to February), look for hay like remains and distinctive root structure.

Similar Species

Orange Balsam
Non-Native
(*Impatiens capensis*)

Orange balsam is much less aggressive than Himalayan balsam, forming smaller less dense stands

Flower is similar in shape but orange in colour

Smaller than Himalayan balsam, growing to a height of 1.2m

Distribution

Widespread and common across the whole of the UK. Primarily on riverbanks and in other damp areas.

Source: NBN Gateway. Check website for current distribution

10. Additional control measures:

- Infested areas (to include buffer zone) should be clearly identified.
- Unauthorised access disturbance or removal of contaminated material should be prevented.
- Restrictions regarding access to the infested areas and any applicable restrictions regarding movement of plant and vehicles, should be communicated to all on-site personnel.
- Vehicles, equipment and footwear should be inspected and cleaned prior to exiting contaminated areas.
- Should access to the area be required during the treatment period, advice should be sought prior to entering.
- Where invasive weeds are identified on adjacent land, owners should be informed so that appropriate actions can be taken to prevent re-infestation.

11. Health and Safety

10.1 Relevant health and safety legislation must be observed in the UK. The relevant regulations are outlined in *The UK Pesticide Guide* produced annually.

10.2 The legislation relevant to the use of herbicides is: -

- The *Control of Substances Hazardous to Health Regulations* (COSHH) 2001. All operatives must comply with the regulations and wear protective clothing and observe a strict code of hygiene of washing hands before drinking and eating.
- The *Control of Pesticides Regulations 1986* under the *Food and Environment Protection Act* (FEPA) 1995.
- *Pesticides: Code of Practice* 1990 (Published by MAFF/HSE).

10.3 Health and Safety Guidelines

- All operatives must hold a Certificate of Competence for herbicide application (NPTC) or be under the direct supervision of a qualified operative prior to commencing a spraying programme.
- All operatives must act responsibly in the storage and handling of the herbicide. The disposal of the herbicide and empty containers must be carried out by operatives in a responsible way. Any spillage must be guarded against and if occurring shall be dealt with and cleaned up. All operatives must carry a basic first aid kit.
- The area of work should be protected from the general public during the treatment and use of the herbicide.
- The use of herbicides should be carried out in compliance with the product label instructions.
- Advice on herbicide application should be sought for a BASIS registered advisor

10.4 Other legislation relevant to the control of non-native invasive weeds includes the following.

- Town and Country Planning Act 1990.
- Highways Act 1980.
- Water Resources Act 1991.
- The Waste Management and Licensing Regulations 1994.
- The Landfill (England and Wales) Regulations 2002.
- The Control of Pesticides Regulations 1986 (under the Food and Environment Protection Act 1985).
- The Control of Substances Hazardous to Health Regulations 2001 (COSHH)
-

12. Benefits of appointing Knotweed Eradication:

- Professional Solutions
- Staged Payments at Fixed Costs
- MAPP Approved Chemicals and Solutions
- Over 20 Years' Experience
- Method Statement
- Risk Analysis
- COSHH Assessment
- Safety Data Sheets

13. Next Steps:

Thank you for giving Knotweed Eradication the opportunity to provide its consultancy services and programme of works. Should you decide to go ahead with our recommendations a full Method Statement Risk Assessment, Safety Data Sheets and COSHH Assessment will be produced for the programme of works for the specific site. Timely and appropriate management of land infested with invasive weed species can avoid excessive costs, potential prosecution and prevent physical damage to buildings and hard surfaces. Our solutions can form part of a normal site clearance, are programmable to meet developer's needs, sustainable over a three-year period, can avoid haulage and land fill costs and are backed by over 20 years weed control experience.

If you have any further questions, please do not hesitate to contact Gary Andrews on 07976 914692 or email gary@knotweederadication.co.uk

Alternatively, we can be contacted by post at New Inn Farm, Dawson Lane, Leyland, PR25 5DB.

13. Warranty Period

Following completion of the treatment programme (and full payment has been received), a five-year warranty period will commence during which time continued monitoring of the site will be undertaken with any reoccurrence of knotweed within the locations specified in this report being treated at no additional cost to the client or subsequent plot owner, subject to the attached terms and conditions.

14. Insurance Backed Guarantee

- 14.1** As members of the Property Care Association Knotweed Eradication can offer an insurance backed policy on works undertaken by themselves. Please note that this policy would be subject to a monitoring period at additional cost and would only be available to plots where knotweed remediation works had been undertaken. This policy comes into effect on completion of the treatment programme.
- 14.2** Knotweed Eradication is not able to offer either free or paid advice on insurance products and any information provided is for reference only. Knotweed Eradication may include insurance backed guarantees as part of its services without additional costs. It is the client's responsibility to assess the suitability of such products.
- 14.3** Knotweed Eradication accepts no liability for the performance or suitability of any third-party product. It is the client's responsibility to ensure suitability of any insurance offered or to make independent arrangements.

Information regarding the Insurance Backed Guarantee available to Helmrig:

KNOTWEED EXPRESS

*Insurance Backed
Guarantee cover for
your Japanese Knotweed
management contracts.*

KNOTWEED EXPRESS

ARE YOU WORRIED ABOUT FINDING THE RIGHT CONTRACTOR FOR YOUR NEEDS?

There are many ways to choose a contractor but it is more reliable to look to those who are members of recognised trade bodies such as the Property Care Association (PCA). And, in respect of Japanese Knotweed management, contractors who are members of the PCA's Invasive Weed Group.

Contractors should issue a written guarantee for the work they have carried out. This means that you should be protected, subject to the terms and conditions, if the treatment work fails within the terms of that written guarantee.

WHAT HAPPENS IF THE CONTRACTOR IS NO LONGER TRADING?

Members of the PCA are able to offer a Knotweed Express Insurance Backed Guarantee (IBG), provided by Quality Assured National Warranties (QANW), to safeguard your written guarantee. By obtaining a Knotweed Express IBG through your chosen contractor you will be protected in the future if regrowth of Japanese Knotweed occurs at the location of the original treatment as detailed within a management plan and the original contractor has ceased to trade.

The cover provided by a Knotweed Express IBG commences on completion of the treatment and monitoring work, this being the date that the contractor certifies, in the form of a Completion Certificate, that the treatment works and the monitoring work have been completed, and issues their written guarantee.

**MOST CONTRACTORS
PROVIDE GUARANTEES,
OFTEN BETWEEN
2 AND 10 YEARS.
HOWEVER, NOT ALL
OF THESE WILL HAVE
THE BACKING OF AN
INSURANCE BACKED
GUARANTEE.**

Imagine that Japanese knotweed re-grows during the guarantee period and you try calling your contractor only to discover they have ceased to trade. Who is going to re-treat the problem under your written guarantee?

More importantly who is going to pay for it? All too often the answer may be you - unless you have been given, or have taken out an Insurance Backed Guarantee.

WHAT IS QANW'S KNOTWEED EXPRESS IBC?

The general principle of our Knotweed Express IBC is simple. It will honour the terms of the written guarantee, originally issued to you by your contractor, where that contractor has ceased to trade and is, therefore, unable to meet their guarantee obligations by carrying out or meeting the costs of any re-treatment works that may be required during their written guarantee.

If the re-growth of Japanese knotweed should occur, which should be covered under a written guarantee previously given by a contractor who has ceased to trade and where you have the benefit of a Knotweed Express IBC from QANW, you would make a claim to QANW. We would collect a completed claim form from you as well as copies of some important associated documentation in relation to your original treatment works, such as your completion certificate, original management plan and written guarantee. Once this is received a re-inspection of the property would be organised by QANW and this would be carried out by an alternative PCA member contractor. There is a re-inspection fee payable (at approximately £250) in respect of each and every claim. The fee would be returned to you,

should the claim be valid. Where the re-inspection report confirms the re-growth of Japanese knotweed in the area(s) originally treated, and detailed within your management plan, and that would also have been covered by the original contractor's written guarantee, QANW will meet the reasonable costs of the re-treatment works that are required. QANW's Knotweed Express Insurance Backed Guarantee meets the demands and needs of those who have had work carried out to treat Japanese knotweed and who require insurance protection in the event that the contractor completes the treatment work, but is consequently unable to honour the terms of their own written guarantee relating to re-growth, due to having ceased to trade.

For full details of the cover provided by QANW's Knotweed Express IBC, as well as details of any significant or unusual exclusions or limitations of the cover, please see a copy of our Insurance Product Information Document which is available on our website:

<https://qanw.co.uk/knotweed-express-ibg-ipid/>

MAKE A GOOD DEAL BETTER - ENSURE YOUR GUARANTEE IS INSURANCE BACKED

How do I get a Knotweed Express Insurance backed guarantee?

When quoting for treatment works, your PCA member will include a Knotweed Express Insurance Backed Guarantee as part of their contract with you, or provide you with a quotation for you to consider.

QANW can provide insurance cover for a period of up to ten years and only a one-off premium payment is required. The quotation will confirm the premium applicable and there may be an administration fee charged by the contractor (not more than £35).

If you wish to proceed with the purchase of a Knotweed Express IBG, you would simply confirm this to your chosen PCA member contractor and pay the appropriate premium, administration fee and Insurance Premium Tax.

The contractor would then make an application to QANW and a policy documentation set would be issued for your retention. It is important to note that the policy is issued based on an estimated completion date, however cover shall only commence on the completion date, this being the date that the contractor certifies, in the form of a Completion Certificate, that the treatment works and the monitoring works detailed in the Management Plan have been completed.

You should ensure that the PCA member provides you with a management plan prior to treatment work commencing and a completion certificate and written guarantee when the treatment and monitoring works have been completed.

1. **AIM**

- 1.1. Helmrig is committed to providing a quality service and working in an open and accountable way that builds trust and respect. One of the ways in which we can continue to improve our service is by listening and responding to the views of our clients and customers, and by responding positively to complaints, and by putting mistakes right.
- 1.2. Therefore, we aim to ensure that:
 - a. Making a compliment or complaint is as easy as possible.
 - b. We welcome compliments, feedback, and suggestions.
 - c. We treat a complaint as a clear expression of dissatisfaction with our service which calls for an immediate response.
 - d. We deal with it promptly, politely and, when appropriate, confidentially.
 - e. We respond in the right way - for example, with an explanation, or an apology where we have got things wrong, or information on any action that we will take to resolve the problem.
 - f. We learn from complaints, use them to improve our service, and review annually our complaints policy and procedures.
- 1.3. We recognise that many concerns will be raised informally and dealt with quickly.
- 1.4. Our aims are to:
 - a. resolve informal concerns quickly.
 - b. keep matters low-key.
 - c. enable mediation between the complainant and the individual to whom the complaint has been referred.
- 1.5. This policy ensures that we welcome compliments and provide guidelines for dealing with complaints from our customers about our services, facilities, staff, and volunteers.

2. **Definitions**

- 2.1. A compliment is an expression of satisfaction about the standard of service we provide.
- 2.2. A complaint is defined as any expression of dissatisfaction; however, it is expressed. This would include complaints expressed face to face, via a phone call, in writing, via email or any other method. All staff should have sufficient knowledge to be able to identify an "expression of dissatisfaction" even when the word "complain," or "complaint" is not used.

3. **Purpose**

We are always glad to hear from people who are satisfied with the services we offer. All compliments are recorded, acknowledged, and a copy is sent to the relevant service manager to provide feedback to the member of staff or service.

4. **Complaints**

The formal complaints procedure is intended to ensure that all complaints are managed fairly, consistently, and wherever possible resolved to the complainant's satisfaction.

5. **Responsibilities**

5.1. The Company's responsibility will be to:

- a. Acknowledge the formal complaint in writing.
- b. Respond within a stated period.
- c. Deal reasonably and sensitively with the complaint; and
- d. Act where appropriate.

5.2. A complainant's responsibility is to:

- a. Bring their complaint, in writing, to the Company's attention normally within 8 weeks of the issue arising.
- b. Raise concerns promptly and directly with the Department Manager
- c. Explain the problem as clearly and as fully as possible, including any action taken to date.
- d. Allow the Department Manager a reasonable time to deal with the matter, and
- e. Recognise that some circumstances may be beyond the Department Manager's control.

6. **Confidentiality**

Except in exceptional circumstances, and when the complaint is made against a member of staff every attempt will be made to ensure that the matter is kept confidential. However, the circumstances giving rise to the complaint may be such that it may not be possible to maintain confidentiality (with each complaint judged on its own facts). Should this be the case, the situation will be explained to the complainant.

7. **Complaints Procedure**

7.1. Written records must be made by at each stage of the procedure.

Stage 1

- 7.2. In the first instance, the person receiving the complaint must establish the seriousness of the complaint. An informal approach is appropriate when it can be achieved. But if concerns cannot be satisfactorily resolved informally, then the formal complaints procedure should be followed.

Stage 2

- 7.3. If the complaint cannot be resolved informally, the complainant should be advised that a formal complaint may be made, and the following procedure should be explained to them. At this stage it may be appropriate to inform a member of the Management Team, to make this explanation.
- a. A formal complaint can be made either verbally or in writing. If in writing the attached form (Annex A) should be used. If verbally, a statement should be taken by a member of the Management Team or a supervisor.
 - b. In all cases, the complaint must be passed on to a member of the Management Team. In the event of a complaint about a member of the Management Team the complaint should be passed to the Managing Director.
 - c. The person receiving the complaint, depending on its nature, must acknowledge the complaint in writing within one week of receiving it.
 - d. One of the above will investigate the complaint. Any conclusions reached should be discussed with the staff member involved and their Line Manager.
 - e. The person making the complaint will receive a response based on the investigation within four weeks of the complaint being received. If this is not possible then a letter must be sent explaining why.

Stage 3

- 7.4. If the complainant is not satisfied with the above decision, then it must be passed to the Managing Director and Board of Directors.
- 7.5. They will examine the complaint and may wish to conduct further interviews, examine files and notes. They will respond within four weeks in writing. Their decision will be final.

TERMS OF WARRANTY

Invasive Weed Warranty

1. Helmrig Limited trading as Knotweed Eradication hereinafter referred to as "The Company" hereby **WARRANT** that, save as hereinafter provided or as provided in the Company's standard terms and conditions of business (quotation pages 4-6) applicable at the date of the Client's acceptance, in the event of the person entitled to the benefit of Warranty notifying the Company in writing within the year warranty period offered from the date of completion of the work if:
 - i. any continuance or recurrence of invasive weed indicated within the Invasive Weeds Management Plan respectively to the work carried out in the areas identified in the report as the "treatment area"
2. The Company, upon production of this Warranty will arrange for the land to be inspected at a mutually convenient time upon payment by such person of the Company's then current inspection fee, provided that the continuance or recurrence complained of is of a kind against which the Company carried out control treatment in the area in which such continuance or recurrence has taken place.
3. If upon such inspection it appears that the treatment carried out by the Company was in any way defective so as to have resulted in re-growth of the invasive weed within treatment areas, the Company will carry out, without further charge, such further treatments as shall to the Company appear to be necessary to control the invasive weed and will reimburse in full the inspection fee paid.
4. This Warranty shall be of no validity or effect and shall be unenforceable against the Company in any one or more of the following circumstances:
 - i. where the person entitled to the benefit of this Warranty does not give written notice of the claim under this Warranty to be received by the Company within twelve months from the date upon which the existence of such a claim could, with the exercise of reasonable diligence by a continuous occupier of the affected premises, have been discovered:

Head Office • New Inn Farm, Dawson Lane, Leyland PR25 5DB

Registered in England 1524060 HELMRIG LTD. • Registered Office as above

- ii. where all works advised or recommended by the Company prior to, at the time of, or subsequent to, treatment carried out by the Company were not fully carried out effectively with good and proper materials and in a workmanlike manner by the Client's contractor.
 - iii. where the Client failed to pay the full amount of the programme of works in the original Invasive Weed Management Plan, any properly payable additional costs, and any interest due within six months of the date upon which the same fell due.
 - iv. where the land and property has not been kept in a good and proper state, so as to detect and prevent tipping or the early detection of growth by invasive weeds.
 - v. where any reasonable recommendation given by the Company addressed to the client has not been complied with, whether such recommendation was given in the Company's report/quotation, or by separate leaflets. This may relate to cutting or pruning, the removal of waste, site clearance of the exclusion of plant, materials from areas adjacent to the treatment area.
 - vi. where, subsequent to the completion of treatment by the Company, there has been any disturbance to the works carried out by the Company. This may include excavations in areas where herbicide treatments have been undertaken, where root barriers have been installed or contaminated waste has been subject to burial on site.
 - vii. where invasive plants have been re-introduced adjacent to watercourses or areas that have been subject to flooding, or by tipping or the uncontrolled propagation from adjacent land.
5. In the event of disposal of the property, being the subject of this Warranty, this Warranty shall be assignable by the Client above named, to the new owner in which case the provisions hereof set out at 1-5 above shall apply in respect of that new owner as if the name of that new owner were substituted for any reference to the client
PROVIDED THAT
6. This Warranty is to be read subject to, and is limited by, the Company's standard Terms and Conditions of business (quotation pages 4-6) current at the date of the Client's acceptance of the Company's offer to carry out the treatment which shall be deemed to be incorporated herein. Terms and conditions are attached to the original report. In the event of any ambiguity or uncertainty arising the Terms and Conditions of this Warranty shall apply.
7. The Company shall be entitled in any action or proceedings by any Relevant Third Party to rely on any term in the Warranty and to raise any equivalent rights in defence of liability as it would have against the Client or any previous Relevant Third Party. Furthermore, the Relevant Third Party agrees that it will be bound by any previous acts, omissions or default of the Client or any previous Relevant Third Party.
8. For the avoidance of doubt, the Client and each subsequent Relevant Third Party acknowledges and agrees that when it is no longer the owner for the time being of the Property or the relevant part, it shall no longer be entitled to the benefit of the rights conferred by this Warranty and that furthermore, neither the Client, nor any Relevant Third Party shall be entitled to assign or transfer its rights and/or obligations under this Warranty.

9. In the event of you wishing to make a claim under the Warranty, a fee reasonable (at the rate prevailing at the time of the claim) is payable and the following documents must be produced by you:

- i. Copy of original report
- ii. This Warranty
- iii. Certificate or letter of completion

If the claim is justified, your payment will be returned in full. If you decide not to pursue your claim, then an administration fee (at the rate prevailing at the time of the claim) will be deducted and the balance will be refunded.

10. In the event of a dispute arising under this Warranty as to the amount to be paid or the work to be performed the dispute may be referred for determination by an expert chosen by mutual agreement between parties. If the parties are unable to agree on an expert within 7 days after the request by one party to another or if the expert agreed upon is unable or unwilling to act either party may apply to the General Manager of the Property Care Association for the appointment of a suitably qualified and experienced expert for the dispute in question with Peter Fitzsimons Technical Manager (Invasive Weeds) Tel: 01480 587931 www.property-care.org.
