PHASE 1: DESK TOP STUDY AND COAL MINING RISK REPORT
PROPOSED RESIDENTIAL DEVELOPMENT
QUEENS DRIVE
KIRKHALT
ROCHDALE
OL11 2NP

Project No: 25-446

Prepared By:

Geraldine White

Date:

28/07/2025

Approved By:

Darren McGrath

Date:

28/07/2025

The information and / or advice contained in this Phase 1: Desk Top Study and Coal Mining Risk Assessment Report is based solely on, and is limited to, the boundaries of the site, the immediate area around the site, and the historical use(s) unless otherwise stated. This 'Report' has been prepared to collate information relating to the physical, environmental and industrial setting of the site, and to highlight, where possible, the likely problems that might be encountered when considering the future development of this site for the proposed end use. All comments, opinions, diagrams, cross sections and / or sketches contained within the report, and / or any configuration of the findings is conjectural and given for guidance only and confirmation of the anticipated ground conditions should be considered before development proceeds. Agreement for the use or copying of this report by any Third Party must be obtained in writing from Arc Environmental Limited (ARC). If a change in the proposed land use is envisaged, then a reassessment of the site should be carried out.

1.0 Introduction

July 2025

Arc Environmental Limited were instructed by Adept Consulting Engineers, to undertake a Phase 1: Desk Top Study (DTS) Report, for a parcel of land adjacent to the Queens Drive, Kirkhale, Rochdale, OL11 2NP, where it is proposed to construct a new residential apartment complex with car parking and delineated soft landscaping areas.

The primary objectives of this report are to assess the geological, geotechnical and potential ground contamination conditions on and beneath the surface of this site. This Phase 1: DTS Report has been carried out generally in accordance with the EA (Environment Agency) guidance for Land Contamination Risk Management (LCRM: October 2020). Based on all the data reviewed, a preliminary Conceptual Site Model (CSM) has been developed to define the scope and extent of any further investigation works deemed necessary, prior to commencing with any future development works.

A site reconnaissance (walkover) survey was completed as part of this study with site photographs included within Appendix I, and all relevant observations noted in Section 2.1 below.

2.0 Physical Setting

2.1 Site Details: -

Table 2.1

Site Name & Address:	Land adjacent to Queens Drive, Kirkhale, Rochdale, OL11 2NP.
National Grid Reference:	389270, 411300 (representative of the central part of the site).
Description of Location:	The eastern portion of the site forms a car park and the western portion is occupied by a medical centre and allotments. It is located in the southwest of Rochdale. Site access is gained off a minor private carriageway to the north of Queens Drive.
Site Boundaries:	N = Queens Drive, E = residential dwellings, S = open undeveloped land, W = residential dwellings / Queens Drive.
Site Shape:	The site is irregular in layout, occupying a total area of c.0.51 Hectares (Ha).
General Topography:	The ground profile at the site is relatively level with a slight decline to the west (with the standard contour height recorded between c.143m to c.145mAOD). A recent detailed topographical / utility survey has not been undertaken.
Site surfacing:	Areas of dense cover of wild grasses, shrubbery and trees. Hardstanding (asphalt) cover within car parking and footpath, demolition rubble and fly-tipping / allotment waste (wood, concrete posts etc).
Above Ground Structures:	Electrical substation in the northeastern corner of the site.
Sub-surface Structures & Services:	Surface water drainage inspection covers were noted on site. Potential other services beneath the site associated with the historical on site and existing adjacent developments. Relic concrete in ground structures / foundations associated with historical development.
Summary of Site History:	From the historical records reviewed since c.1851, the site was encompassed by undeveloped land (agricultural). A minor carriageway and drain / small surface water course spanned over the western site boundary. By c.1956 several semi-detached buildings are recorded on site (which were demolished by c.2024). A new building is constructed in the central portion of the site by c.2024. Recently an electrical substation has been constructed in the northeastern portion of the site. Salient adjacent features have included Rochdale Canal, Crest Mill with tank and filter bed, two historical infilled ponds, schools, road infrastructure and residential and an increase in light commercial end use.

3.0 Environmental Setting

3.1 Site Geology: -

The geological assessment for this site has been based on geological maps and digital online data published by the British Geological Survey (BGS). The following documents have been reviewed as part of this study: -

- Online BGS GeoIndex.
- BGS Sheet 85, Manchester, Solid & Drift Edition, 1:50,000 scale, 2011.
- BGS Sheet SD81SE, 1:10,000 scale, 2007.
- Online CA Interactive Map Viewer.
- Coal (Mining Remediation) Authority (CA) Consultants Coal Mining Report Ref. 51003510158001.
- Envirocheck Report Ref. 380671801_1_1.

3.1.1 Made Ground: -

In accordance with the published BGS maps, significant thicknesses of made ground are not shown to directly encroach the site.

However made ground deposits are expected to be present beneath the site, from the construction and demolition of the former buildings that occupied the site, comprising a mixture of disturbed natural strata (clays etc.) and anthropogenic debris (brick etc.). In addition there may be associated relic foundations and also an area of disturbed ground from the construction of the recent electrical substation. The western portion of the site is comprised by allotment gardens likely to contain ‘ashy’ waste.

3.1.2 Superficial Deposits: -

The published BGS plans and data indicate the western portion of the site is underlain by Glacial Till (undifferentiated) deposited during the Pleistocene Epoch (Devensian). The Glacial Till is anticipated to comprise firm to stiff slightly sandy slightly gravelly clay, with cobbles and sand lenses. The eastern portion of the site is comprised of Glaciofluvial Deposits of sands and gravel with silt and clay lenses and occasional boulders.

3.1.3 Solid Geology: -

According to published BGS data, the site is underlain by the Pennine Lower Coal Measures Formation (PLCM) of Carboniferous Period. These undifferentiated deposits typically comprise interbedded cyclical alternations of mudstone, siltstone, sandstones and coal seams with seatearths and ironstone bands.

The published geological information indicates there is no faulting within the site boundary.

3.2 Coal Mining Risk Assessment: -

In accordance with the Mining Remediation Authority (MRA - previously the Coal Authority) Online Interactive Map Viewer, the site lies within a ‘Coal Mining Reporting Area’, with the site recorded to be situated out with a defined ‘Development High Risk area’ (DHRA), ‘Past Shallow Coal Workings’ and ‘Probable Shallow Workings’.

3.0 Environmental Setting (Cont'd)

3.2 Coal Mining Risk Assessment (Cont'd): -

In order to further assist with this site-specific coal mining risk assessment (CMRA) a Consultants Coal Mining Report (Ref. 51003510158001) has been obtained from the MRA for this site and a copy of which is attached in Appendix II. The information provided in the report concurs with the BGS and online MRA data and confirms that the site is not situated within an area of probable recorded or unrecorded shallow workings.

There are no mine entries located within an influencing distance of the site.

There are no spine roadways recorded at shallow depth, no recorded opencast workings, managed tips within c.500m and no coal mining subsidence claims within c.50m of the site. The site is not within the boundary of an opencast site from which coal has been removed by opencast methods.

There are no recorded gas incidents, that required investigation and remediation by the Coal Authority to mitigate the effects of the mine gas emission. In accordance with the new CL:AIRE guidance 'Good practice for Risk Assessment for Coal Gas Emissions (October 2021), Figure 13.1: Decision support tool for mine gas risk assessment (copy attached in Appendix II), there is a potential negligible risk from hazardous ground gas, and therefore no further assessment is required.

Subsequently, from the information obtained and reviewed, this site is not at risk from historical coal mining activities and no further intrusive or remedial works are deemed necessary.

3.3 Surface Mineral Extraction:

There are no other extraction features on or within an influencing distance to the site, which may impact on the proposed development. There are brickfields labelled c.195m to the southwest depicted on historical OS map dated c.1853. The site does not lie within the Cheshire Brine Subsidence Compensation District, therefore the risk to subsidence due to brine extraction is considered negligible.

3.4 Potential Geological Hazards: -

Table 3.1

Potential Hazard	Hazard Potential/Rating
Landslide:	Very low
Shrinkable Soils:	No hazard / very low
Collapsible Soils:	Very low
Compressible Soils:	No hazard
Running Sand:	Very low
Dissolution:	No hazard

Table 3.1 above provides a summary of the property site specific information on the potential hazards related to natural ground subsidence.

3.5 Site Hydrogeology: -

Table 3.2

STRATA	Aquifer / Soil Leachability EA Classification	Comments
Groundwater Vulnerability:	Secondary Superficial Aquifer - High Vulnerability (combined).	Productive bedrock aquifer / productive superficial aquifer. High pollutant speed (>550mm / year).

3.0 Environmental Setting (Cont'd)

3.5 Site Hydrogeology (Cont'd): -

Table 3.2 (Cont'd)

STRATA	Aquifer / Soil Leachability EA Classification	Comments
Superficial Deposits: (Glacial Till)	Secondary Aquifer – Undifferentiated.	These aquifers are where it is not possible to apply either a Secondary A or B definition because of the variable characteristics of the strata type.
Superficial Deposits: (Glaciofluvial Deposits)	Secondary Aquifer – A.	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers.
Solid Geology: (PLCM Formation)	Secondary Aquifer – A.	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers.

- There are no Source Protection Zones (SPZ) on or within c.1km of the site.
- There are two water abstractions recorded within c.250m of the site. EC Ref. 23 and 24 located c.197m and c.220m to the west. License No. 2569002026 and 2569002074 M S Gadhi & A Raazaq : Source from borehole – groundwater and canal, respectively.

3.6 Site Hydrology: -

Table 3.3

SURFACE WATER FEATURE	Location	Comments
OS Water Network & GQA Classified River:	Six recorded within c.250m.	EC Ref. 64 to 203 located between c.63m and c.203m offsite related to Rochdale Canal and tributaries / field drains.
Unclassified Watercourse(s), Canals, Ponds, Lakes & Other Bodies of Water:	None recorded within c.250m off-site.	~
Flooding from River or Sea: (Fluvial & Tidal)	The site doesn't fall within a designated flood zone II or III for fluvial flooding.	The EA records the site in an area with a very low risk of fluvial flooding (<0.1% annual chance). The site is categorised as a Flood Zone I (with low probability of flooding). Very low chance of flooding to 20cm.
Surface Water Flooding: (Pluvial)	The published EA data shows that the central portion of the site is at a medium risk of pluvial flooding. In addition the northern margin of the site is categorised as high risk, whilst the remaining area is not at significant risk.	The EA considers parts of the site in the north to be at high risk from surface water (pluvial) flooding (with 3.3% annual chance), medium risk in the central portion (of between 1% and 3.3% chance of a flood each year) (with the remainder of the site shown as very low to risk (with <0.1% to 0.1 to 1% annual chance). Appropriate surface water management should be adopted to deal with the future management of positively drained surface water.
Groundwater Flooding at Surface (BGS):	There are potential areas for groundwater flooding to occur at the site.	Information obtained from Landmark, including published maps indicating the potential for groundwater flooding at surface and below ground level, proposed by the British Geological Survey (BGS). This information is based on areas which may be potentially influenced by geological factors.
RAINFALL	Measurements (mm)	Comments
Annual:	1197.22	Based on 'station average' records from Rochdale, dated from 1991-2020.
Rainfall: Min (May)	65.67	
Rainfall: Max (Dec)	138.88	

3.0 Environmental Setting (Cont'd)

3.7 Radon Assessment: -

The site is recorded to lie within a lower probability radon area, with <1% homes estimated to be at or above the action level, in accordance with the BGS, National Geoscience Information Service, and their assessment suggests that no radon protective measures are necessary in the construction of new dwellings or extensions. This BRE Digest, BR211 (2015) Radon: Guidance on protective measures for new buildings, infers the site is situated within a clear grid square (1km), and therefore no radon protective measures are required for the site.

With reference to BGS / UK Radon mapping (dated December 2022), the site falls in a 1km grid square where all parts are in bands of lowest radon potential of <1%. No further assessment is therefore required.

3.8 Site Ecology: -

Table 3.4

<u>FEATURES</u>	<u>Location</u>	<u>Comments</u>
Local Nature Reserves:	None recorded within c.250m.	~
Areas of Adopted Green Belt:	None recorded within c.250m.	~
Sites of Special Scientific Interest / Special Areas of Conservation:	One recorded within c.250m.	EC Ref. 252 and 253 located c.180m to the north – Rochdale Canal.
Nitrate Vulnerable Zone:	None recorded within c.250m.	~
Other sensitive land uses:	None recorded within c.250m.	~

There was no visual evidence to suggest that the site is affected by the presence of invasive weed species such as Japanese Knotweed, Giant Hogweed or Himalayan Balsam, at the time of the recent site survey, however a site-specific survey has not been carried out. Therefore, site awareness during future investigation works and during the construction phase for any potential invasive weed species would be considered prudent.

3.9 Estimated Soil Chemistry: -

Data provided by the BGS in relation to estimated soil chemistry for a number of key metals and metalloid elements is summarised in Table 3.5 below.

Table 3.5

<u>Element</u>	<u>Soil Sample Type</u>	<u>Estimated Soil Concentrations (mg/kg)</u>
Arsenic	Sediment	15 – 25
Cadmium	Sediment	1.8 – 2.2
Chromium (total)	Sediment	60 – 90
Lead	Sediment	100 – 200
Nickel	Sediment	15 – 30

Note; the references to the anticipated background concentrations of contaminants, sourced from the BGS, should not be relied upon. They are not site-specific and do not represent the condition of the ground at the proposed development site.

4.0 Industrial Setting

4.1 Site History:

Copies of historical OS maps covering the site area & adjacent land are included in Appendix III and a summary of the site history based on these plans, is provided in Table 4.1 below.

Table 4.1

Significant features / potential contamination sources highlighted in **bold**.

Date	Site	Adjacent Areas
c.1851 – c.1938	The site is encompassed by a parcel of open undeveloped land (possibly agricultural). A minor carriageway (Cown Top Lane) and possible drain / small surface watercourse spans the western site boundary and a track encroaches the southern margin.	The immediate adjoining land-use comprises undeveloped agricultural land. A minor carriageway (Cown Top Lane) extends from the site to the northeast and southwest. A minor carriageway (Hartley Lane) is recorded c.64m to the west. Hartley Farm is shown c.54m to the east. Gorrels farm is shown c.111m to the northwest. Rochdale Canal is recorded c.174m to the north. By c.1910 Crest Mill is shown c.188m to the southwest and a tank and filter bed are depicted c.139m and c.151m to the southwest, respectively. Two ponds are shown associated with Hartley Farm to the east. By c.1929 a new carriageway (Queens Way) is depicted c.10m to the north. A brick works with clay pit beyond is recorded c.195m to the southwest.
c.1956 – c.2006	Several semi-detached buildings (possibly residential) are recorded on site.	Queens Drive is shown to bound the site to the north. New residential dwellings are shown c.4m to the west, c.10m to the east, c.10m to the northeast and c.64m to the southeast and c.84m to the south. Kirkholt Primary School is depicted c.97m to the east. The ponds are no longer evident (infilled) to the east. A tank is recorded c.138m to the northeast associated with Gorrels Farm . Allotment gardens are recorded c.208m to the southwest and c.90m to the south. By c.1975 a new roundabout / carriageway upgrade is recorded to the north of Queens Drive . The canal is labelled as disused . A garage is shown c.75m to the west (which has expanded by c.1990). By c.1990 a new depot is depicted c.60m and a works c.105m to the northwest. There has been a general increase in residential development in the vicinity.
c.2024	The former buildings have been demolished and a new building is constructed in the central portion of the site.	The school to the east has been redeveloped. The remainder of the immediate adjoining land-use is relatively consistent with the earlier survey.
Present Day c.2025	A new electrical substation is recorded on the eastern portion of the site. The site remains consistent with the previous layout.	The immediate adjacent area remains relatively consistent in layout with the previous survey.

4.2 UXO Risk: -

According to the Unexploded Bomb Risk Map produced by ZeticaUXO, the site lies within a low risk area in terms of unexploded ordnance (areas indicated as having 15 bombs per 1000 acre or less). A copy of the ZeticaUXO Unexploded Bomb Risk Map can be seen attached in Appendix IV.

4.3 Landfill & Waste: -

The following information relating to landfill and waste has been obtained from the Envirocheck Report (attached in Appendix III) site walkover and published data;

- There are no Local Authority Recorded Landfill Sites or Coal Authority Managed Tips, areas of Potentially Infilled Land (Non-Water), Registered Landfill Sites, Historical Landfill Sites or within c.250m of the site.

4.0 Industrial Setting (Cont'd)

4.3 Landfill & Waste (Cont'd): -

- There is one Licensed Waste Management Facility located c.205m to the north. EC Ref. 51 Ashfield Valley Inert Landfill Site. License No. 53728 Wimpey Construction (Uk) Limited. Site Category - Landfills Taking Non-biodegradable Wastes (Not Construction).
- There are two areas of Potentially Infilled Land (Non-Water) located c.126m to the southeast and c.187m to the southwest (last date of mapping c.1993) related to unknown filled ground (pit, quarry etc) possibly related to infilling of a former clay pit associated with a brick works.
- There are two areas of Potentially Infilled Land (Water) located between c.220m and c.242m to the east (last date of mapping c.1931 and c.1956) related to historical ponds.

Therefore, when considering the above, it is considered that the site is at risk from potential hazardous ground gas production / migration. In order to confirm the level of risk, it is recommended that a programme of ground gas monitoring is undertaken, as part of the recommended intrusive investigation works for the proposed development at the site, in accordance with CIRIA 665 and BS8485:2015+A1:2019.

4.4 Statutory Requirements / Authorisations: -

Table 4.2

TYPE	Location	Comments
Enforcement and Prohibition Notices:	None recorded within c.250m.	~
Integrated Pollution Prevention and Controls:	None recorded within c.250m.	~
Local Authority Pollution Prevention and Controls:	None recorded within c.250m.	~
Prosecutions Relating to Authorised Processes:	None recorded within c.250m.	~
Registered Radioactive Substances:	None recorded within c.250m.	~
COMAH/Explosive/NI HHS Sites:	None recorded within c.250m.	~
Planning Hazardous Substances Consents / Enforcements:	None recorded within c.250m.	~
Contemporary Trade Entries:	Ten recorded within c.250m.	EC Ref. 112 – 117 located c.89m and c.225m offsite. Two active entries related to car dealers.
Fuel Station Entries:	None recorded within c.250m.	~
Relevant Points of Interest:	Six recorded within c.250m.	Commercial Services: EC Ref. 189 to 191 located between c.94m and c.143m offsite related to recycling services, vehicle repair, testing and servicing and distribution and haulage. Manufacturing and Production: EC Ref. 217 located between c.140 and c.164m offsite related to unspecified works or factories and Tanks (Generic).

4.0 Industrial Setting (Cont'd)

4.5 Pollution Incidents and Discharge Consents: -

Table 4.3

TYPE	Location	Comments
Discharge Consents:	Three recorded within c.250m.	EC Ref. 1 located c.242m and c.250m to the northeast – United Utilities. Discharge Type - Public Sewage: Storm Sewage Overflow. Ref. 01ROC0066 / Eprsb3396re
Prosecutions Relating to Controlled Waters:	None recorded within c.250m.	~
Substantiated Pollution Incident Register:	None recorded within c.250m.	~
Water Industry Act Referrals:	None recorded within c.250m.	~
Pollution Incidents to Controlled Waters:	Four recorded within c.250m.	EC Ref. 12 to 13 located between c.73 to c.202 offsite related to two Category 2 Significant Incidents – Oils - Gas Oil / Oils - Diesel (Including Agricultural). Incident Ref. 95620485 / 94622311. Cause of incident leaking tank / other incident – unknown. Two category 3 Minor Incidents located c.73m to the north. EC Ref. 12 Pollutant – Oils – Unknown. Incident Ref. 95621350 Accidental spillage / Leakage. Dated 7th June 1995 and c.197m to the west. EC Ref. 13 Pollutant – Miscellaneous – Unknown. Incident Ref. 97621034. Cause - Unknown. Dated 9th June 1997.

5.0 Conceptual Site Model (CSM)

The Conceptual Site Model (CSM) is one of the primary planning tools that can be used to support the decision-making process of managing contaminated land and groundwater on any given site and allows a better understanding of what needs to be done to achieve risk management, and from this appropriate remediation techniques, if required for those risk management goals can be chosen.

This can be done by undertaking a *source-pathway-receptor* analysis of the site. The anticipated *sources*, *pathways* and *receptors* for this site are summarised in Table 5.1 on the following page. A graphical representation of the CSM has been produced for the site and can be seen attached in Appendix V, which also sets out the critical pollutant linkages of concern for this site.

5.0 Conceptual Site Model (CSM) (Cont'd)

Table 5.1

*= Not included in the Human Health & Controlled Waters Risk Assessment.

	<i>Sources (S)</i>		<i>Pathways (P)</i>		<i>Receptors (R)</i>
S1	Made ground associated historical use including any construction / demolition debris (from historical buildings on site) and fly tipping and 'ashy' allotment waste.	P1	Ingestion & Dermal Contact	R1	Human Health - End users – residential (and construction workforce)
		P2	Air – Inhalation of vapours (indoor & outdoors) and contact with dust generated through the construction works		
		P3	Plant Uptake and attached soil	R2	Controlled Waters: Groundwater – anticipated within the underlying bedrock (PLCM) and Glaciofluvial deposits (Secondary Aquifer - A) and superficial strata (Glacial Till) (Secondary Aquifer – undifferentiated). There are several surface water features within a plausible migration distance to the site related to Rochdale Canal and also tributaries and field drains.
S2	Potential hazardous ground gas associated with off site sources (i.e. infilled land).	P4	Migration through existing service corridors	R3	Adjacent sites
		P5	Direct contact with building materials	R4*	Building materials & protection of water supply pipes
		P6	Surface runoff & Infiltration	R5*	Flora and fauna

5.1 Geotechnical Considerations: -

The following potential geotechnical issues and hazards have been identified for this site. These issues should be considered if future development of the site is to take place;

- Thickness, type, variability and condition of made ground.
- Geotechnical parameters of the natural deposits and depth to suitable load bearing founding strata across the site, particularly with respect foundations and to the design of potential piling / ground improvement (if required).
- Relic foundations from previous structures on site.
- Stability of excavations.
- Permeability of the strata for suitability of soakaways.
- The presence of possible underground services (i.e., gas, water, electricity, etc.).
- Chemical attack of buried concrete.

To determine the geotechnical considerations above with more certainty, if any new foundations are envisaged it is recommended that intrusive geotechnical investigation works are undertaken with associated geotechnical testing to aid in assessing detailed foundation proposals.

The information reviewed indicates that the site can be considered as being located within a **LOW to MODERATE** geotechnical risk setting.

5.0 Conceptual Site Model (CSM) (Cont'd)

5.2 Sources of Contamination and Probable Contaminants: -

Soils - Human Health:

Considering the recorded site history, in accordance with published OS maps within the Landmark Envirocheck Report, and taking into consideration the proposed development, the following primary potential on site contamination issues have been identified for this site;

- Made ground associated with former onsite historical development including any construction / demolition debris and possible ashy allotment waste.
- Potential hazardous ground gas associated adjacent infilled land.

No olfactory or visual evidence (i.e. surface staining) of ground contamination was apparent during the site reconnaissance survey. It is considered the level of risk posed to human health and the local environ overall in connection with the proposed development is as below.

The information reviewed indicates that the site can be considered as being located within a **LOW to MODERATE** ground contamination risk setting for Human Health.

To assess the associated risks to human health and environmental impact the following outline geo-environmental testing is recommended:

- Generic contamination suite, typically comprising; Arsenic, Cadmium, Chromium, Copper, Lead, Mercury, Nickel, Selenium, Zinc, Total Organic Carbon (TOC) and pH.
- Asbestos screening (and quantification if encountered).
- Speciated Polyaromatic Hydrocarbons (PAHs) and Total Petroleum Hydrocarbons (TPHs) should be undertaken, where ashy type deposits are encountered and if there is any visual or olfactory evidence of fuels/oils or other wastes present in the ground.

Waste Acceptance Criteria (WAC) testing may be required to aid with off-site disposal of waste soils.

Consideration should also be given to the protection of any new service pipes for the proposed development, and a suite of contamination testing (UKWIR suite) may be required in order to meet the requirements of the local utilities service provider for their 'pipe selection risk assessment' (PSRA), once the location and depth of future services have been determined.

Controlled Waters:

The following issues have been taken into consideration when assessing the risks towards controlled waters;

- There are no Source Protection Zones (SPZ) on site or within c.1km of the site.
- There are two water abstractions recorded within c.250m of the site.
- Significant sources of leachable contaminants are not considered be present on site.
- There are several surface water features recorded within a plausible distance of the site, including Rochdale Canal, tributaries and field drains.
- The solid geology beneath the site is a Secondary Aquifer – A (PLCM).
- The superficial deposits are a Secondary Aquifer – A (Glaciofluvial deposits) and Secondary Aquifer – undifferentiated (Glacial Till).

5.0 Conceptual Site Model (CSM) (Cont'd)

5.2 Sources of Contamination and Probable Contaminants: -

Controlled Waters (Cont'd):

The information reviewed indicates that the site can be considered as being located within a **LOW** ground contamination risk setting for Controlled Waters.

6.0 Recommendations for Phase 2: Ground Investigation Works

The conclusions contained within this report have been based on a review of geological plans, historical plans and available environmental data relating to the site and nearby adjacent land and forms the basis of a preliminary risk assessment. The primary benefits of undertaking this report are as follows:

- (i) Identify the geotechnical and / or geoenvironmental characteristics of the ground in sufficient detail to quantify the contamination risk at the site and for the economic design of any future site / proposed development, construction or associated remedial works.
- (ii) Minimise the risk of unforeseen ground conditions which might cause increased costs and / or programme (construction) delays later.

Therefore, it is recommended that a programme of Phase 2: Ground Investigation (intrusive investigation) works are completed for this site to provide an assessment of the geo-environmental characteristics of the site.

These intrusive investigation works should be completed prior to commencing with any future development works and should include for the following or a similar scope of investigation works:

- A series of windowless sampling boreholes (including insitu geotechnical testing (SPT testing, etc.) to aid with future foundation design for the proposed development and to collect samples for subsequent laboratory testing.
- A series of manually excavated trial pits to complete insitu DCPs to inform CBRs for hardstanding areas, ground flooring slabs etc.
- Provision of mechanically excavated trial pits to determine potential presence of relic foundations.
- Provision and installation of combined groundwater and ground gas monitoring standpipes followed by a programme of monitoring visits.
- Completion of variable head (falling) permeability tests to determine suitability of soakaways.
- Laboratory geotechnical testing (i.e. PSD, liquid & plastic limit, pH & soluble sulphate testing etc).
- Laboratory contamination screening on selected samples recovered from the investigation positions for typical contaminants as detailed in Section 5.2 to assess the risks to Human Health and Controlled Waters. Samples of soil collected will be forwarded to UKAS and MCERTS accredited laboratory to undertake the recommended testing.
- Waste Acceptance Criteria (WAC) to aid in off-site disposal classification (if required).
- Site supervision and production of RAMS and an interpretive Phase 2: Ground Investigation Report, including a Ground Contamination Risk Assessment and Waste Classification of soils.

Prior to site investigation works commencing on site, all existing utilities / services should be identified and recorded, such that any potential damage to services crossing the site can be prevented, as well as ensuring the health and safety of future site workers.

Section 1 – Mining activity and geology

Past underground mining

No past mining recorded.

Probable unrecorded shallow workings

None.

Spine roadways at shallow depth

No spine roadway recorded at shallow depth.

Mine entries

None recorded within 100 metres of the enquiry boundary.

Abandoned mine plan catalogue numbers

The following abandoned mine plan catalogue numbers intersect with some, or all, of the enquiry boundary:

16820		
-------	--	--

Please contact us on 0345 762 6848 to determine the exact abandoned mine plans you require based on your needs.

Outcrops

No outcrops recorded.

Geological faults, fissures and breaklines

No faults, fissures or breaklines recorded.

Opencast mines

None recorded within 500 metres of the enquiry boundary.

Coal Authority managed tips

None recorded within 500 metres of the enquiry boundary.

Section 2 – Investigative or remedial activity

Please refer to the 'Summary of findings' map (on separate sheet) for details of any activity within the area of the site boundary.

Site investigations

None recorded within 50 metres of the enquiry boundary.

Remediated sites

None recorded within 50 metres of the enquiry boundary.

Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

Mine gas

None recorded within 500 metres of the enquiry boundary.

Mine water treatment schemes

None recorded within 500 metres of the enquiry boundary.

Section 3 – Licensing and future mining activity

Future underground mining

None recorded.

Coal mining licensing

None recorded within 200 metres of the enquiry boundary.

Court orders

None recorded.

Section 46 notices

No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

Withdrawal of support notices

The property is not in an area where a notice to withdraw support has been given.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

Payments to owners of former copyhold land

The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Section 4 – Further information

Based on the responses in this report, no further information has been highlighted.

Future development

If development proposals are being considered, technical advice relating to both the investigation of coal and former coal mines and their treatment should be obtained before beginning work on site. All proposals should apply specialist engineering practice required for former mining areas. No development should be undertaken that intersects, disturbs or interferes with any coal or coal mines without first obtaining the permission of the Coal Authority.

MINE GAS: Please note, if there are no recorded instances of mine gas within 500m of the enquiry boundary, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded. Developers should be aware that the investigation of coal seams, mine workings or mine entries may have the potential to generate and/or displace underground gases. Associated risks both to the development site and any neighbouring land or properties should be fully considered when undertaking any ground works. The need for effective measures to prevent gases migrating onto any land or into any properties, either during investigation or remediation work, or after development must also be assessed and properly addressed. In these instances, the Coal Authority recommends that a more detailed Gas Risk Assessment is undertaken by a competent assessor.

Section 5 – Data definitions

The datasets used in this report have limitations and assumptions within their results. For more guidance on the data and the results specific to the enquiry boundary, please **call us on 0345 762 6848** or **email us at groundstability@coal.gov.uk**.

Past underground coal mining

Details of all recorded underground mining relative to the enquiry boundary. Only past underground workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination, will be included.

Probable unrecorded shallow workings

Areas where the Coal Authority believes there to be unrecorded coal workings that exist at or close to the surface (less than 30 metres deep).

Spine roadways at shallow depth

Connecting roadways either, working to working, or, surface to working, both in-seam and cross measures that exist at or close to the surface (less than 30 metres deep), either within or within 10 metres of the enquiry boundary.

Mine entries

Details of any shaft or adit either within, or within 100 metres of the enquiry boundary including approximate location, brief treatment details where known, the mineral worked from the mine entry and conveyance details where the mine entry has previously been sold by the Authority or its predecessors British Coal or the National Coal Board.

Abandoned mine plan catalogue numbers

Plan numbers extracted from the abandoned mines catalogue containing details of coal and other mineral abandonment plans deposited via the Mines Inspectorate in accordance with the Coal Mines Regulation Act and Metalliferous Mines Regulation Act 1872. A maximum of 9 plan extents that intersect with the enquiry boundary will be included. This does not infer that the workings and/or mine entries shown on the abandonment plan will be relevant to the site/property boundary.

Outcrops

Details of seam outcrops will be included where the enquiry boundary intersects with a conjectured or actual seam outcrop location (derived by either the British Geological Survey or the Coal Authority) or intersects with a defined 50 metres buffer on the coal (dip) side of the outcrop. An indication of whether the Coal Authority believes the seam to be of sufficient thickness and/or quality to have been worked will also be included.

Geological faults, fissures and breaklines

Geological disturbances or fractures in the bedrock. Surface fault lines (British Geological Survey derived data) and fissures and breaklines (Coal Authority derived data) intersecting with the enquiry boundary will be included. In some circumstances faults, fissures or breaklines have been known to contribute to surface subsidence damage as a consequence of underground coal mining.

Opencast mines

Opencast coal sites from which coal has been removed in the past by opencast (surface) methods and where the enquiry boundary is within 500 metres of either the licence area, site boundary, excavation area (high wall) or coaling area.

Coal Authority managed tips

Locations of disused colliery tip sites owned and managed by the Coal Authority, located within 500 metres of the enquiry boundary.

Site investigations

Details of site investigations within 50 metres of the enquiry boundary where the Coal Authority has received information relating to coal mining risk investigation and/or remediation by third parties.

Remediated sites

Sites where the Coal Authority has undertaken remedial works either within or within 50 metres of the enquiry boundary following report of a hazard relating to coal mining under the Coal Authority's Emergency Surface Hazard Call Out procedures.

Coal mining subsidence

Details of alleged coal mining subsidence claims made since 31 October 1994 either within or within 50 metres of the enquiry boundary. Where the claim relates to the enquiry boundary confirmation of whether the claim was accepted, rejected or whether liability is still being determined will be given. Where the claim has been discharged, whether this was by repair, payment of compensation or a combination of both, the value of the claim, where known, will also be given.

Details of any current 'Stop Notice' deferring remedial works or repairs affecting the property/site, and if so the date of the notice.

Details of any request made to execute preventative works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991. If yes, whether any person withheld consent or failed to comply with any request to execute preventative works.

Mine gas

Reports of alleged mine gas emissions received by the Coal Authority, either within or within 500 metres of the enquiry boundary that subsequently required investigation and action by the Coal Authority to mitigate the effects of the mine gas emission. Please note, if there are no recorded instances of mine gas reported, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded.

Mine water treatment schemes

Locations where the Coal Authority has constructed or operates assets that remove pollutants from mine water prior to the treated mine water being discharged into the receiving water body.

These schemes are part of the UK's strategy to meet the requirements of the Water Framework Directive. Schemes fall into 2 basic categories: Remedial – mitigating the impact of existing pollution or Preventative – preventing a future pollution incident.

Mine water treatment schemes generally consist of one or more primary settlement lagoons and one or more reed beds for secondary treatment. A small number are more specialised process treatment plants.

Future underground mining

Details of all planned underground mining relative to the enquiry boundary. Only those future workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination will be included.

Coal mining licensing

Details of all licenses issued by the Coal Authority either within or within 200 metres of the enquiry boundary in relation to the under taking of surface coal mining, underground coal mining or underground coal gasification.

Court orders

Orders in respect of the working of coal under the Mines (Working Facilities and Support) Acts of 1923 and 1966 or any statutory modification or amendment thereof.

Section 46 notices

Notice of proposals relating to underground coal mining operations that have been given under section 46 of the Coal Mining Subsidence Act 1991.

Withdrawal of support notices

Published notices of entitlement to withdraw support and the date of the notice. Details of any revocation notice withdrawing the entitlement to withdraw support given under Section 41 of the Coal Industry Act 1994.

Payment to owners of former copyhold land

Relevant notices which may affect the property and any subsequent notice of retained interests in coal and coal mines, acceptance or rejection notices and whether any compensation has been paid to a claimant.

The map highlights any specific surface or subsurface features within or near to the boundary of the site.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.

Bedrock Aquifers

- High Vulnerability, Principal Aquifer
- High Vulnerability, Secondary Aquifer
- Medium Vulnerability, Principal Aquifer
- Medium Vulnerability, Secondary Aquifer
- Low Vulnerability, Principal Aquifer
- Low Vulnerability, Secondary Aquifer

Superficial Aquifers

- High Vulnerability, Principal Aquifer
- High Vulnerability, Secondary Aquifer
- Medium Vulnerability, Principal Aquifer
- Medium Vulnerability, Secondary Aquifer
- Low Vulnerability, Principal Aquifer
- Low Vulnerability, Secondary Aquifer

- Unproductive Aquifer
- ⋯ Soluble Rock
